

AHLIA UNIVERSITY

RESEARCH OUTPUT

Vol. 1

TABLE OF CONTENTS

Research Messsages	30
2023 Abstracts	35
- Empowerment Sustainability Perspectives For Bahraini Women As Entrepreneurs.....	36
- Being Socially Present In A Time Of Social Distancing: Investigating The Online Social Learning Experiences Of Teacher-Trainees During Covid-19	37
- Socio-Economic Assessing Of Researcher's Perceptions And Farmer's Willingness To Adopt Silage Technology In Palestine-West Bank	38
- Using Markov Chains And Data Mining Techniques To Predict Students' Academic Performance	39
- Using Chatgpt And Other Llms In Professional Environments.....	40
- Ownership Concentration And Audit Actions.....	41
- Adoption Of Renewable Energy Sources And Sustainable Performance In Palestinian Industrial And Commercial Sectors With Governmental Role As A Moderator: An Explanatory Approach.....	42
- Enhancing Organizational Social Sustainability: Exploring The Effect Of Sustainable Leadership And The Moderating Role Of Micro-Level Csr	43
- Minimal Reconstructibility Of Boolean Control Networks	44
- A Review On Epidemic Models In Sight Of Fractional Calculus.....	45
- An Empirical Study Of The Implementation Of An Integrated Ergo-Green-Lean Framework: A Case Study.....	46
- Novel Entropic Dynamics Of Donor-Acceptor Quantum Dot System.....	47
- Quantum Control Of A Nonlinear Time-Dependent Interaction Of A Damped Three-Level Atom	48
- An Optimization Model For A Sustainable Closed-Loop Supply Chain Considering Efficient Supplier Selection And Total Quantity Discount Policies	49
- Promoting The Advocacy Behavior Of Customers Through Corporate Social Responsibility: The Role Of Brand Admiration.....	50
- Turiyam Graphs And Its Applications.....	51
- Relevance And Rigour In Management Education – Gulf Universities And Information On Standards	52
- Review Of Carbon Capture And Storage Technologies In Selected Industries: Potentials And Challenges	53
- Sustainability Reporting And Energy Sectorial Performance: Developed And Emerging Economies.....	54
- Synthesis Of A Novel Approach Of Fabricating Tin Oxide Nanostructures Thin Film For Industrial Applications	55
- Thirty-Six Years Of The Journal Of Financial Accountability & Management: Scientometric Review	56
- The Impact Of Green Lending On Credit Risk: Evidence From Uae's Banks.....	57
- Editorial.....	58
- Education Skills For Digital Age Toward Sustainable Development – Analysis And Future Directions	59
- Sustainably Developing In A Digital World: Harnessing Artificial Intelligence To Meet The Imperatives Of Work-Based Learning In Industry 5.0	60
- Sentiment Analysis Of Multilingual Dataset Of Bahraini Dialects, Arabic, And English	61
- Analysis Of Carbon Footprints And Surface Quality In Green Cutting Environments For The Milling Of Az31 Magnesium Alloy	62
- Brain Tumors Detection Using Computed Tomography Scans Based On Deep Neural Networks	63
- Corporate Social Responsibility Disclosure And Banks' Performance: The Role Of Economic Performance And Institutional Quality	64
- Donors' Attitude Towards Fundraising Efforts In UAE During Covid-19 Pandemic: The Moderating Role Of Ethics.....	65

- The Adoption Of AAOIFI Standards By Islamic Banks: Understanding The Microeconomic Consequences	66
- Quantum Entanglement Versus Skew Information Correlations In Dipole-Dipole System Under KSEA And DM Interactions	67
- A Study On The Impact Of Integrating Reinforcement Learning For Channel Prediction And Power Allocation Scheme In MISO-NOMA System.....	68
- Guest Editorial: Sustainability Reporting In Different Institutional And Regulatory Environments.....	69
- Does It Pay To Be Green? Evidence From Banks In Emerging Markets.....	70
- Women On Boards: An Empirical Study On The Effects On Financial Performance And Corporate Social Responsibility	71
- The Moderating Role Of Gamification Toward Intentions To Use Mobile Payments Applications In Bahrain: An Integrated Approach	72
- Renewable Technologies: Solar Power And Wind Power Energy Utilization – Advantages And Disadvantages	73
- Artificial Intelligence In Marketing: Concerns And Solutions	74
- The Higher Education Students' Perception On Iot Acceptance As An Educational Facilitating Medium: Perception From Omani Context	75
- Solar Farms, Sustainability And Mitigating Co2 Emissions: A Technological Approach	76
- Artificial Intelligence In Marketing And Organizational Decision-Making: Some Challenges And Concerns.....	77
- Understanding Artificial Intelligence Through Its Applications And Concerns	78
- Digital Sustainability For Business Education: Literature Review	79
- The Impact Of Smart Technologies On Sme Sustainability: The Mediation Effect Of Sustainability Strategy – Literature Review	80
- Digitizing Business Education And Quality Of Education: A Survey	81
- Fintech And Financial Inclusion: Evidence From MENA Countries.....	82
- Success Factors Of Using Artificial Intelligence	83
- Impulse Buying Behaviors In A Digital World	84
- The Factors Affecting The Adoption Of Artificial Intelligence Technologies In Organizations	85
- The Impact Of Emerging Technologies On Accounting And Promises To Minimize Operational Costs ...	86
- The Relationship Between Food E-Advertising And Children's Obesity In Bahrain: Role Of Rules	87
- Analyzing The Effects Of Digital Communication On Project Management In Bahrain During The COVID-19 Pandemic (A Case Study)	88
- Sustainable Competitive Advantage Through Technological Innovation: An Introduction.....	89
- Design Education Outside The Classroom. A Comparative Study Between Two Case Studies With Industry-University Collaboration.....	90
- Foreword.....	91
- Preface	92
- A New Multivariate Product Kernel Functions Of The Beta Polynomial Family.....	93
- Board Interlocking, Knowledge Sharing And Firm Performance	94
- Artificial Intelligence And Security Challenges	95
- The Effect Of Mentorship And Funding Support On Entrepreneur's Motivation In Bahrain	96
- Citizen Journalism: Technological And Digital Challenges.....	97
- The Impact Of COVID-19 And Digitizing Accounting Education	98
- Return On Expectations Of Jobseekers' Training In The Employability Skills Program Of Bahrain.....	99
- Exploring E-Learning During And Post COVID-19 Pandemic	100
- COVID-19 and Digitizing Accounting Education	101
- New Teaching Methods In Universities Using Artificial Intelligence	102
- The Accounting Education, Between Digitalization And The COVID-19 Crisis	103
- Artificial Intelligence In Finance.....	104
- The Agile Adaptivity Of Educators And Their Strategic Influence On The Learner During COVID-19 Pandemic	105

- Assessing The Waste Management Practices In Stone And Marble Industry In Palestine: Practical Implications.....	106
- Does XBRL Adoption Eliminate Misclassification Of Income Statement Items?	107
- Does The Adoption Of Blockchain Technology Add Intangible Benefits To The Industrial Sector? Evidence From Jordan.....	108
- Toward A Cashless Society: Assessing The Acceptance Of Bahrain Benefitpay Using TAM And SEM....	109
- Carbon Dioxide Emissions And The Economic Growth: Competitiveness And Economic Development View	110
- Key Success Factors For Entrepreneurship In Sustainable Development Projects.....	111
- Impact Of Cloud Computing As A Digital Technology On SMEs Sustainability	112
- The Influence Of Digital Competence Of Academicians On Students' Engagement At University Level: Moderating Effect Of The Pandemic Outbreak.....	113
- Welcome Message From The Conference Chair	114
- The Impact Of Data Augmentation On Sentiment Analysis Of Translated Textual Data	115
- Voice Command Based Remote Surgery Simulator	116
- Improving The Security Of E-Exam Systems.....	117
- Investigating The Value Of Using Emotionally Intelligent Artificial Conversational Agents To Carry Out Assessments In Higher Education: Review	118
- Automatic Content Searching Model During Blended Learning Class Sessions.....	119
- The Era Of Internet Of Things: Towards Better Security Using Machine Learning	120
- Deep Learning Based An Optimized Predictive Academic Performance Approach	121
- Negative Impact Of Social Media Advertisements On Branding In Digital Marketing	122
- Programming Courses Teaching Methods Before, During, And After COVID-19 Pandemic.....	123
- The Impact Of Smart Technologies On SMEs' Sustainability: The Mediation Effect Of Sustainability Strategy.....	124
- Cost Saving Model For Lighting In Smart Cities.....	125
- Predicting Acute Respiratory Failure Using Fuzzy Classifier	126
- Accuracy And Privacy Evaluation Of Detected Communities Using Attributed-Based Label Propagation Method	127
- The Role Of Knowledge Sharing In Reinforcing Civic Engagement Practices In The Context Of Artificial Intelligence: The Case Of The Kingdom Of Bahrain.....	128
- Multi-Factor Authentication Modeling Using Petri Nets: Review	129
- Visual Paragraph Generation: Review	130
- Fraud Classification In Financial Statements Using Machine Learning Techniques	131
- A Framework For Labor Market Analysis Using Machine Learning.....	132
- Fake News Detection: A Graph Mining Approach	133
- COVID-19 Contact-Tracing Networks Datasets.....	134
- Image Process Based Recommender System For Social Media Marketing.....	135
- Propose a Recommender System to Dynamically Align Higher Education Curriculums With 4IR Market Needs.....	136
- Numerical Solutions Of A Three-Dimensional Schrödinger Equation For A Non-Relativistic Quark Model	137
- The Impact Of Customer Experience Strategy On The Buying Behavior On The Beauty Sector In Bahrain	138
- The Effects Of Cyber Crime On E-Banking	139
- The Factors Affecting Online Buying Behavior Of Consumers During Crises: Literature Review	140
- The Impact Of Social Media On E-Commerce And Marketing	141
- The Impact Of Online Banking Services On Customer Spending Behavior	142
- The Impact Of Value-Added Tax On Small And Medium Enterprises	143
- Preface	144
- The Importance Of Digital Marketing In Building Brand Loyalty	145
- Effects Of Social Media And The Internet On Academic Performance In Bahrain Universities.....	146

- Qr Code Encryption For Improving Bank Information And Confidentiality	147
- On The Existence Results Of A Coupled System Of Generalized Katugampola Fractional Differential Equations.....	148
- Fast Facial Expression Recognition System: Selection Of Models.....	149
- Novel Framework For Selecting Cloud Provider Using Neutrosophic And Modified GAN	150
- Survey on Linear Integral Equations and the Laguerre Polynomials.....	151
- Fuzzy Contra GPRW-Continuous Mappings.....	152
- Fractional Order Glucose Insulin Model With Generalized Mittag-Leffler Kernel	153
- Predicting The Behavior Of Solar Energy In Tulkarm City Using Markov Chains And Fuzzy Markov Chains	154
- Impact of COVID-19 on Knowledge Management: The Double Edged Sword of Big Data	155
- Artificial Intelligence Application in the Fourth Industrial Revolution.....	156
- The Impact Of Artificial Intelligence On Enhancing Human Resource Management Functionality.....	157
- Preface	158
- Managing Small And Medium Enterprises (SMEs) During Unexpected Situations: Strategies For Overcoming Challenges	159
- Introducing Artificial Intelligence To Human Resources Management.....	160
- The Effectiveness Of Applying Artificial Intelligence In Recruitment In Private Sectors	161
- The Impact Of Artificial Intelligence On Financial Institutes Services During Crisis: A Review Of The Literature	162
- Impact Of Fintech On The Sustainable Development Of Bahrain During COVID-19 Pandemic	163
- The Impact Of Artificial Intelligence On The Human Resource Industry And The Process Of Recruitment And Selection	164
- Artificial Intelligence (AI) In The Education Of Accounting And Auditing Profession.....	165
- Artificial Intelligence And Human Resource Management In Public Sector Of Bahrain	166
- Using Artificial Intelligence (AI) in the Management Process.....	167
- Impact Of Job Crafting On Employee Performance While Working-From-Home	168
- Artificial Intelligence In Accounting And Auditing Profession.....	169
- Artificial Intelligence For Decision Making In The Era Of Big Data.....	170
- The Impact Of Bahrain's Adaptive Sports On Quality Of Life	171
- Artificial Intelligence In The Process Of Training And Developing Employees	172
- COVID-19 And Digitizing Accounting Education: Theory and Literature Review.....	173
- A User-Priorities-Based Strategy For Three-Phase Intelligent Recommendation And Negotiating Agents For Cloud Services	174
- New Prospective On Information Entropy Using Different Initial States Of The Atom-Field Interaction.....	175
- A Framework Of Outcome-Based Assessment And Evaluation For Computing Programs	176
- Fintech Up-Coming In Saudi Arabia: Study, Analysis, And Recommendations	177
- Dual-Tier Cluster-Based Routing In Mobile Wireless Sensor Network For IOT Application	178
- Emerging Technologies For Digitalized Learning In Higher Education	179
- Assessing The Direct And Moderating Effect Of COVID-19 On The Performance Of The Banking Sector In The Mena Region	180
- Transfer Learning And Sentiment Analysis Of Bahraini Dialects Sequential Text Data Using Multilingual Deep Learning Approach.....	181
- An Exploration Into People's Perception About The Future Of Cryptocurrencies And Its Impact On The Financial World: Evidence From An Emerging Market	182
- Diffusing It Competence With Business Analytics Enables Data-Driven Culture For Achieving Evidence-Based Managerial Decisions For Assuring Sustained Competitive Advantage: A Literature Survey	183
- The Mediating Role Of Strategic Planning In The Impact Of Project Management Strategy On Firm Performance.....	184
- The Usage Of Digital Media In Society	185
- The Use Of Modern Technology In The Practice Of Digital Public Relations.....	186
- A Broader Perspective On Extensible Business Reporting Language (Xbrl) In Earnings Management	

Research	187
- The Future Of E-Learning In The Post-Corona Era In Arab World	188
- Artificial Intelligence In Educational Examinations	189
- The Usage Of Technology In Mass Communication And Its Applications.....	190
- Knowledge Management Capabilities Excel The Long-Term Corporate Sustainable Development: A Literature Review.....	191
- The Need For Environmental Governance: A Literature Review Paper	192
- Artificial Intelligence And Its Impact On Accounting Systems	193
- Augmented Press And Robot Journalists Who Determines The Ethics Of Journalistic Coverage?!	194
- Accounting Information System And Islamic Banks' Performance: An Empirical Study In The Kingdom Of Bahrain.....	195
- Knowledge Sharing Augments Healthcare Sector Performance In Bahrain	196
- Adoption Model Of Mobile Technologies For Bahrain Bankers	197
- Preface	198
- Transformation Of Managerial Accounting Trends In The Era Of Digitalization	199
- The Capabilities Of Using Artificial Intelligence For Value-Added	200
- Artificial Intelligence And The Challenges Of New Journalistic Formats.....	201
- Preface	202
- Preface	203
- How Artificial Intelligence Revolutionizing Digital Marketing	204
- Preface	205
- The Impact Of Accounting Information System On The Organizations Financial Performance.....	206
- The Impact Of Digital Banking On The Bank Operation And Financial Performance.....	207
- Preface	208
- E-Learning And Understanding Of Accounting During COVID-19 Pandemic: Literature Review	209
- The Use of Facebook and Technology in E-Learning Process.....	210
- Factors Affecting The Adoption Of Remote Auditing During The Times Of COVID-19: An Integrated Perspective Of Diffusion Of Innovations Model And The Technology Acceptance Model.....	211
- The Impact Of Robotic Process Automation (RPA) Technology In Banking Sector In Bahrain	212
- Sustainability Reporting In Banking And Financial Services Sector: A Regional Analysis.....	213
- Journal Of Sustainable Finance And Investment: A Bibliometric Analysis	214

2022 Abstracts215

- Women On Boards Of Directors: The Moderation Role Of Female Labour Force Participation.....	216
- Board Gender Diversity And Environmental Disclosure: Evidence From The Banking Sector	217
- Risk Management And Corporate Governance Of Islamic Banks: Evidence From GCC Countries	218
- Sustainability Reporting And Agriculture Industries' Performance: Worldwide Evidence.....	219
- Adaptive QoS-Aware Multi-Metrics Gateway Selection Scheme For Heterogenous Vehicular Network.....	220
- Micro-Level CSR As A New Organizational Value For Social Sustainability Formation: A Study Of Healthcare Sector In Gcc Region	221
- Security And Privacy Recommendation Of Mobile App For Arabic Speaking.....	222
- Sustainability Disclosure And Its Impact On Telecommunication And Information Technology Sectors' Performance: Worldwide Evidence	223
- International Perspectives On Sustainability Reporting.....	224
- Awareness Of Occupational Health Hazards And Occupational Stress Among Dental Care Professionals: Evidence From The GCC Region	225
- Toward Efficient Intrusion Detection System Using Hybrid Deep Learning Approach	226
- Shariah, Presentation And Content Dimensions Of Web 2.0 Applications And The Firm Value Of Islamic	

Financial Institutions In The GCC Countries	227
- An Empirical Study On Company's Perception Of Integrated Reporting In India.....	228
- Toward Sustainability Reporting In The Mena Region: The Effects On Sector's Performance.....	229
- Advanced Feature-Selection-Based Hybrid Ensemble Learning Algorithms For Network Intrusion Detection Systems.....	230
- A CSR Perspective To Foster Employee Creativity In The Banking Sector: The Role Of Work Engagement And Psychological Safety	231
- Fundraising Appeals For The COVID-19 Epidemic Fight: A Cross-Country Study Of Donor Responses	232
- Sustainability Reporting In Food Industry: An Innovative Tool For Enhancing Financial Performance..	233
- Investigating The Combination Of Deep Learning For Channel Estimation And Power Optimization In A Non-Orthogonal Multiple Access System	234
- The Psychological Well-Being Of University Students Amidst COVID-19 Pandemic Scoping Review, Systematic Review And Meta-Analysis	235
- Evaluation Of Descriptive Type Answer Using Transformed Weight And Cosine-SVM	236
- Fostering Hotel-Employee Creativity Through Micro-Level Corporate Social Responsibility: A Social Identity Theory Perspective.....	237
- Fostering Advocacy Behavior Of Employees: A Corporate Social Responsibility Perspective From The Hospitality Sector	238
- Arduino Based Obstacle Awareness Vest For Blind People	239
- Sustainability Engagement's Impact On Tourism Sector Performance: Linear And Nonlinear Models..	240
- The Study On Digital Marketing Influences On Sales For B2B Start-Ups In South Asia.....	241
- Intellectual Structure Of Knowledge Management: A Bibliometric Analysis Of The Journal Of Information And Knowledge Management.....	242
- The Role Of ICT In The Development Of Children's' With Disabilities	243
- Gender Discrimination In Bahrain: Implications For Human Resource Management	244
- Cultural Perspectives On Intrinsic Motivation And Hrm Practices In Pakistan	245
- The Acceptance And Practicality Of Digital HRM In Nigeria	246
- Introduction: Context Matters In Human Resource Management	247
- Rethinking Education In Arab Countries: The Case Of COVID-19.....	248
- Digitizing Education During COVID-19 Pandemic In Bahrain Higher Education Context.....	249
- Preface	250
- E-Readiness Of The Universities During The COVID-19 Pandemic: Evidence From Bahrain	251
- Sustainable Information Technology Governance for Higher Education Institutions (HEIs) - A Systematic Literature Review	252
- Adapting It Governance Policies And Technology To Cope With COVID-19 At Ahlia University.....	253
- COVID-19 Challenges To University Information Technology Governance	254
- HRM In The Global South: A Critical Perspective.....	255
- Work-Related Musculoskeletal Disorders Among Employees With Different Tasks: An Ahlia University Case Study.....	256
- Trust-Aware Security System For Dynamic Southbound Communication In Software Defined Network	257
- Ensemble Learning For Sentiment Analysis Of Translation-Based Textual Data.....	258
- Marketing And Entrepreneurship: Challenges And Opportunities.....	259
- Factors Affecting E-Payment Acceptance By Customers: An Empirical Study In The Kingdom Of Bahrain	260
- The Usage Of Internet Of Things In Agriculture: The Role Of Size And Perceived Value.....	261
- Developing A Model Of Smart Home Usage Among It Specialists: The Role Of Machine Learning	262
- Incorporation Of Artificial Intelligence, Big Data, And Internet Of Things (IoT): An Insight Into The Technological Implementations In Business Success.....	263
- Intelligent Traffic Management System For Smart Cities Utilizing Reinforcement Learning Algorithm	264
- Immersive Technology Systematic Review And Challenges	265
- Between Two Crises: Do Islamic Banks Suffer?	266

- A Critical Review On Global CO2 Emission: Where Do Industries Stand?.....	267
- COVID-19 Exposure: A Risk-Averse Firms' Response.....	268
- Exploring The Physical Activity Level And Sleep Quality Among A Cohort Of Healthy Females In Egypt: A Cross-Sectional Survey.....	269
- Deep Learning And Power Allocation Analysis In NOMA System.....	270
- Preface	271
- The Impact Of Fintech In Entrepreneurship Development: The Moderation Role Of Banking During Crisis	272
- Knowledge And Perceptions Of The COVID-19 Pandemic In The Kingdom Of Bahrain: A Descriptive Study.....	273
- The Usage Of Artificial Intelligence In Journalism.....	274
- Preface	275
- The Impact Of Artificial Intelligence (AI) In The Oil And Gas Industry	276
- The Influence Of Cybersecurity On The Firms' Financial Performance	277
- Artificial Intelligence: Chatbot—The New Generation Of Communication.....	278
- Challenges Of The Industrial Iot (IIoT) In Higher Education In The Kingdom Of Bahrain.....	279
- The Impact Of Digitizing Business Education On The Quality Of Education During COVID-19 Pandemic: The Role Of International Accreditation Bodies.....	280
- The Challenges And Factors Influencing The E-Learning System Usage During COVID-19 Pandemic	281
- The Role Of Artificial Intelligence In Human Resources	282
- In Influencers We Trust? A Model Of Trust Transfer In Social Media Influencer Marketing	283
- The Role Of Artificial Intelligence In Knowledge Management	284
- Interns' Self-Efficacy, Internet Addiction, Wellbeing, And Online Learning Experiences: A Descriptive- Correlational Study	285
- Societal Partnership In The Fourth Era Of Industrial Revolution Between The Media And Civil Society Institutions Aiming To Reducing The Demand For Drugs	286
- The Impact Of Artificial Intelligence On The Banking Industry Performance	287
- The Relationship Between Food E-Advertising And Children's Obesity In Bahrain	288
- Technological Sustainability In The Twenty-First Century.....	289
- The Usage Of Financial Technology Payments During The Pandemic Of COVID-19	290
- The Impact Of Artificial Intelligence On Accounting And Auditing In Light Of The COVID-19 Pandemic	291
- Foreword.....	292
- The Adoption Of Technology Management Principles And Artificial Intelligence For A Sustainable Lean Construction Industry In The Case Of Bahrain.....	293
- Under The COVID Pandemic: Is It The Springtime For Forensic Accounting Field To Blossom?.....	294
- Foreword.....	295
- Islamic Accounting Research Between 1982 And 2020: A Hybrid Review	296
- The Threshold Effect Of Covid19 On Shariah Indices:an Empirical Analysis Of GCC Countries.....	297
- Perception And Impact Of Coronavirus (COVID-19) On People's And Lifestyle: E-Learning, People, Well- Being, Quality Of Life, Protective Measures And Government	298
- Online Education During COVID-19 Pandemic In Kingdom Of Saudi Arabia.....	299
- Technology Role In Education To Overcome COVID-19 Challenges	300
- The Government Support In Distance Education: Case Of Bahrain	301
- Using Student Opinions To Guide Investments In Assessment Methods.....	302
- E-Learning And Its Application In Universities During Coronavirus Pandemic.....	303
- The Impact Of Artificial Intelligence (AI) On The Development Of Accounting And Auditing Profession	304
- Researchers' Motivation And Its Correlates: An Empirical Study Amid COVID-19 Pandemic In Arab Region	305
- Higher Education A Pillar Of Fintech Industry Development In MENA Region.....	306
- Language And Electronic Media Competencies Required For The Arabic Language Teacher For Non-	

Native Speakers In The Time Of COVID 19.....	307
- Distance Learning Solutions And The Role Of Artificial Intelligence: A Review.....	308
- The Experience Of The Kingdom Of Saudi Arabia In The Field Of E-Learning During The Coronavirus Pandemic.....	309
- The Influence Of Artificial Intelligence On Smart Learning: An Overview.....	310
- Assessing The Perceived Usability Of An Intelligent Contact Tracing App To Prevent The Spread Of Covid-19 Using SUS And TAM: Be Aware Bahrain.....	311
- Managers As Autonomous Action Researchers: A Practice-Centric Framework.....	312
- The Role Of Artificial Intelligence In Sustainable Finance.....	313
- Understanding Mobile Learning, Imagination Capacity, And Team Creativity Through People-Learn-Framework And Creativity Theory Perspective.....	314
- Key Factors Determining The Expected Benefit Of Customers When Using Artificial Intelligence.....	315
- Deep Learning-Based Iraqi Banknotes Classification System For Blind People.....	316
- Sustainability Reporting And Retail Sector Performance: Worldwide Evidence.....	317
- Sentiment Analysis Of Reviews In Natural Language: Roman Urdu As A Case Study.....	318
- Blockchain Evaluation Framework For Supply Chain Management: A Decision-Making Approach.....	319
- Factor Affecting Environmental Enforcement Effectiveness: A Critical Review.....	320
- Crowdsourced Technology As A Collaborative Tool For Environmental Enforcement: A Critical Review Of Current Applications.....	321
- Blockchain In Environmental Compliance And Enforcement.....	322
- Digital Innovation In The Fourth Industrial Revolution Era.....	323
- Gender Diversity On Corporate Boards And Earnings Management: A Review.....	324
- Information Technology Governance And Online Banking In Bahrain.....	325
- The Role Of Social Responsibility In The Digital Public Relations Age.....	326
- Preface.....	327
- Financial Technology: Literature Review Paper.....	328
- The Digital Economy: Challenges And Opportunities For Economic Conversion In The Gulf Countries.....	329
- Islamic Banking Strategies In The World Of Fintech: Success Story Of Bahrain.....	330
- How The Innovation Performance In Gcc Heis Is Affected By The Knowledge Management In The Era Of Knowledge Economy.....	331
- The Use Of Artificial Intelligence In The Field Of Electronic Commerce.....	332
- The Role Of Interactivity In Social Commerce Websites: A Content Analysis Study.....	333
- Management Accounting In The Digital Era: Literature Review.....	334
- Foreword.....	335
- The Impact Of Digitalization On Managerial Accounting Roles.....	336
- The Impact Of Fintech Phenomenon On Economic Development: The Case Of Bahrain.....	337
- The Role Of Artificial Intelligence In Entrepreneurship.....	338
- Students Perceptions About Teaching In Smart Bahraini Universities.....	339
- E-Learning: Is The End Of Classic Education?.....	340
- Social Media As An Effective Tool For Health Communication: Insights From The COVID-19 Pandemic.....	341
- Behavioral And Non-Behavioral Factors And The Level Of Adapting And Implementing Fintech And E-Banking In Bahrain: Suggested Model.....	342
- The Effectiveness Of Applying Fintech Application In Bahrain: Theoretical Perspective.....	343
- The Usage Of Artificial Intelligence In Arab Financial Institutions.....	344
- Ethical Concerns In Artificial Intelligence (Ai): The Role Of Regtech And Islamic Finance.....	345
- Increasing Female Participation On Boards: Effects On Sustainability Reporting.....	346
- Oil Price Changes And Stock Returns: Fresh Evidence From Oil Exporting And Oil Importing Countries.....	347
- Reporting Inpatients' Experiences And Satisfaction In A National Psychiatric Facility: A Study Based On The Random Forest Algorithm.....	348
- Customer Churn Prediction In Telecommunication Industry Using Deep Learning.....	349

- Factors Affecting The Adoption Of Technology In Education System: Case Of GCC Universities.....	350
- Presence Of Women On Boards In Industrial Firms: Evidence From Gcc Countries Financial Markets.....	351
- Sustainable Banking Regulations Pre And During Coronavirus Outbreak: The Moderating Role Of Financial Stability.....	352
- Financial Sustainability And Outreach In Microfinance Institutions: Evidence From MENA Countries.....	353
- The Applications Of Artificial Intelligence To Control COVID-19.....	354
- The Dark Side Of Social Media: Spreading Misleading Information During COVID-19 Crisis.....	355
- Artificial Intelligence In Healthcare And Medical Imaging: Role In Fighting The Spread Of COVID-19.....	356
- Entrepreneurship Growth In Emerging Economies: New Insights And Approaches.....	357
- Organisational, Societal, And Individual Factors Affecting Women's Career Progression In Bahraini Banking Sector.....	358
- A Worldwide Sectorial Analysis Of Sustainability Reporting And Its Impact On Firm Performance.....	359

2021 Abstracts 360

- Effective Intrusion Detection System To Secure Data In Cloud Using Machine Learning.....	361
- The Impact Of Self-Efficacy On Feelings And Task Performance Of Academic And Teaching Staff In Bahrain During Covid-19: Analysis By Sem And Ann.....	362
- Sustainability Reporting In Smart Cities: A Multidimensional Performance Measures.....	363
- Improving Firm's Economic And Environmental Performance Through The Sustainable And Innovative Environment: Evidence From An Emerging Economy.....	364
- Integrated Reporting And Performance: A Cross-Country Comparison Of Gcc Islamic And Conventional Banks.....	365
- On The Joint Distribution Of Two Continuous Independent Random Variables.....	366
- Effective Intrusion Detection System To Secure Data In Cloud Using Machine Learning.....	367
- The Impact Of Self-Efficacy On Feelings And Task Performance Of Academic And Teaching Staff In Bahrain During COVID-19: Analysis By Sem And Ann.....	368
- Sustainability Reporting In Smart Cities: A Multidimensional Performance Measures.....	369
- Improving Firm's Economic And Environmental Performance Through The Sustainable And Innovative Environment: Evidence From An Emerging Economy.....	370
- Integrated Reporting And Performance: A Cross-Country Comparison Of GCC Islamic And Conventional Banks.....	371
- On The Joint Distribution Of Two Continuous Independent Random Variables.....	372
- Towards Explaining Knowledge Hiding Through Relationship Conflict, Frustration, And Irritability: The Case Of Public Sector Teaching Hospitals.....	373
- The Relationship Between Intellectual Capital And Employees' Productivity: Evidence From The Gulf Cooperation Council.....	374
- Using Online Platforms For Political Communication In Bahrain Election Campaigns.....	375
- Towards Making An Invisible Diversity Visible: A Study Of Socially Structured Barriers For Purple Collar Employees In The Workplace.....	376
- Contactless Core-Temperature Monitoring By Infrared Thermal Sensor Using Mean Absolute Error Analysis.....	377
- Fakes And Futures.....	378
- Women Reclaiming Control: A Literature Analysis Paper.....	379
- The Relationship Between Premenstrual Syndrome And The Quality Of Sleep Among Egyptian Women: An Observational Study.....	380
- APRehab: A Methodology For Serious Games Design Oriented To Psychomotor Rehabilitation In Children With Hearing Impairments.....	381
- Adaptive Security Architectural Model For Protecting Identity Federation In Service Oriented Computing.....	382
- The Failure Of Corporate Governance At Infrastructure Leasing And Financial Services Limited: Lessons Learnt.....	383

- Independence And Effectiveness In Internal Shariah Audit With Insights Drawn From Islamic Agency Theory	384
- COVID-19 And Islamic Social Finance	385
- Impact Of COVID-19 On Islamic Social Finance.....	386
- Introduction	387
- Financial Inclusion And Risk Exposure Among Different Income Groups: The Impact Of COVID-19 Pandemic	388
- Financial Capacity Indicators And Risk Exposure Among Different Income Groups: Influence Of COVID-19.....	389
- Formal Institutions And The Development Of Entrepreneurial Activity - The Contingent Role Of Corruption In Emerging Economies	390
- Information Management In The Early Stages Of The COVID-19 Pandemic	391
- COVID-19 And Digitizing Accounting Education: Empirical Evidence From Gcc	392
- Designing Online Platforms Supporting Emotions And Awareness	393
- The World Has Been Naked: Transparency And The Cyber Age	394
- Guide To Giving During The COVID-19 Pandemic: The Moderating Role Of Religious Belief On Donor Attitude.....	395
- The Impact Of Entrepreneurship Education On Entrepreneurs' Skills	396
- Power Optimization Analysis Using Throughput Maximization In MISO Non-Orthogonal Multiple Access System	397
- Academic Staff Perceptions On Students' Traditional Assessment Transformations Towards Online Evaluation During COVID-19 Pandemic In Higher Education: A Preliminary Study From Two Diverse Cultures.....	398
- Whether Cryptocurrency Is A Threat Or A Revolution? An Analysis From ESG Perspective	399
- Is Fintech Valuation An Art Of Science? Exploring The Innovative Methods For The Valuation Of Fintech Startups.....	400
- The Role Of Artificial Intelligence In Recruitment Process Decision-Making.....	401
- Earthen Stabilized Construction Methods And Their Adaptation To The Modern Life Needs.....	402
- The Analysis Of Human Attitude Toward Cybersecurity Information Sharing	403
- COVID-19 Interior And Architectural Design Solutions For Educational Workshops	404
- Technological Environmental Education In The Arab World: Case Of Kingdom Of Bahrain	405
- The Era Of The Creative Minds-The Role Of Nanomaterials To Achieve Sustainable And Innovation Architecture	406
- Throughput Maximization Power Optimization Analysis In Non-Orthogonal Multiple Access System..	407
- On A Single Server Queue With Two-Stage First Essential Service Followed By One Of The Two Types Of Additional Optional Service And Optional Deterministic Server Vacations	408
- Graphical Analysis Of Single Sideband Modulation.....	409
- Online Financial Reporting Disclosure In Islamic Banking: Evidence From Bahrain.....	410
- Artificial Intelligence Fostering Fintech: Emerging Trends And Use Cases.....	411
- Corporate Social Responsibility Disclosure: Evidence From Bahrain	412
- Development Of Effective Internal Shariah Audit Framework Using Islamic Agency Theory	413
- Exploring The Role Of Artificial Intelligence In Healthcare Management And The Challenge Of Coronavirus Pandemic.....	414
- Investigation On The Influence Of English Expertise On Non-Native English-Speaking Students' Scholastic Performance Using Data Mining.....	415
- The Contribution Of Information And Communications Technology In The Sustainable Development Goals	416
- Artificial Intelligence And Women Empowerment In Bahrain.....	417
- Adoption Of Fintech Services In The Banking Industry.....	418
- Blockchain Technology Implications On Supply Chain Management: A Review Of The Literature	419
- The Role Of Digital Business In Achieving Generation Z Human Capital Sustainability	420
- The Impact Of The Online Patient Appointment System On The Quality Of Health And Medical Services	421

- The Implementation Of Artificial Intelligence In The Public Sector: Opportunities And Challenges	422
- The Moderating Role Of E-Readiness In Crisis Management And Strategic Flexibility: A Review	423
- Impact Of Innovative Technologies In Healthcare Organization Productivity With ERP.....	424
- The Usage Of Artificial Intelligence In Digital Marketing: A Review	425
- Effect Of Pricing In Digital Markets On Customer Retention	426

RESEARCH MESSAGES

It is with great pride and anticipation that we present this research book, authored by the esteemed authors of Ahlia University. Within these pages, we embark on a transformative journey, guided by the visionary leadership and unwavering commitment of a distinguished scholar and advocate for research and academic excellence.

The University Council has played an instrumental role in shaping the institution's research landscape, fostering a culture of innovation, and nurturing the intellectual growth of its faculty and students. This research book stands as a testament to the President's steadfast dedication to advancing knowledge, empowering researchers, and fostering a vibrant research community.

As we delve into the chapters of this book, we encounter a tapestry of groundbreaking research projects that span a wide range of disciplines and domains. From the frontiers of scientific discovery to the depths of social analysis, each chapter represents a remarkable contribution to its respective field.

It is a testament to the diversity and depth of research conducted within our institution, reflecting the profound impact our university has on the advancement of knowledge across various disciplines. By fostering an environment that values intellectual curiosity and embraces diverse perspectives, the University Council has empowered researchers to transcend disciplinary boundaries and address complex societal challenges.

This research book serves as a testament to the synergy that emerges when individuals from different backgrounds come together to explore new frontiers of knowledge. Furthermore, this research book serves as a platform for the dissemination of knowledge and the exchange of ideas, both within our academic community and beyond.

The President's commitment to knowledge sharing underscores the university's dedication to making a meaningful impact on society. By fostering vibrant intellectual dialogue and engaging with global communities, our institution contributes to the growth and development of the scholarly landscape, fostering innovation and transformative change.

This research book celebrates the remarkable achievements and aspirations of our academic community. It serves as a testament to the power of visionary leadership in fostering a vibrant research culture. Our institution has embraced the responsibility of advancing knowledge, driving innovation, and making a positive impact on society.

May this research book inspire researchers, scholars, and students to embark on their own intellectual journeys, fueled by curiosity, guided by rigorous methodologies, and committed to addressing the pressing challenges of our time. Together, we can continue illuminating pathways that lead to a brighter and more enlightened future for all.

Prof. Abdulla Al-Hawaj
Founding President
Ahlia University

It is with great pleasure and honor that we present this research book. Within these pages, we embark on a journey of intellectual exploration, driven by the vision and leadership of a distinguished scholar and advocate of academic excellence.

The President's profound commitment to fostering a culture of research and innovation has propelled our university to new heights, positioning it as a beacon of knowledge and a catalyst for societal advancement. This research book stands as a testament to show unwavering dedication to cultivating an environment that nurtures and empowers researchers, scholars, and students alike.

Throughout the published work in this book, we encounter a tapestry of innovative ideas, cutting-edge methodologies, and rigorous intellectual inquiry. The President's leadership has fostered an environment that encourages interdisciplinary collaboration, where researchers from various disciplines converge to address complex challenges and explore new frontiers of knowledge.

By transcending disciplinary boundaries, our university takes a holistic approach to research, recognizing that the most meaningful discoveries often arise at the intersection of different fields.

Moreover, this research book serves as a platform for disseminating knowledge and sharing the fruits of intellectual labor with a global audience. The President's emphasis on the dissemination of research findings underscores the university's commitment to advancing the frontiers of knowledge and making a tangible impact on society.

By actively contributing to the scholarly community and engaging in intellectual dialogue, our university plays a pivotal role in shaping the trajectory of academic research and fostering collaboration beyond our institution's walls.

The research book also invites us to reflect on the profound impact that research has on society at large. Through the President's visionary leadership, our university embraces its responsibility to address pressing societal challenges, serving as a driving force for positive change.

The research showcased within these pages is not only a testament to intellectual curiosity but also a testament to our university's commitment to creating a more equitable, sustainable, and prosperous future for all.

Finally, this research book represents a celebration of the remarkable achievements and aspirations of our academic community. It is a testament to the tireless pursuit of knowledge, the spirit of discovery, and the transformative power of research.

As we embark on this journey, we are reminded of the profound impact that individuals, institutions, and collective efforts can have on shaping a better world.

Prof. Mansoor Alaali
President
Ahlia University

In an ever-evolving world driven by knowledge and innovation, the pursuit of research stands at the forefront of human progress. It is within this context that the esteemed Deanship of Postgraduate Studies and Research presents its latest published work to the scholarly community—a comprehensive research book that encapsulates the remarkable advancements and intellectual exploration taking place within its esteemed institution.

This research book stands as a testament to the unwavering commitment of Deanship to foster a vibrant research culture, empowering scholars to push the boundaries of knowledge across various disciplines.

Within these pages, readers will embark on a transformative journey through the realms of cutting-edge research, where innovative ideas intersect with rigorous methodologies. The book showcases a diverse array of research projects, each representing a unique contribution to their respective fields. From groundbreaking scientific discoveries to insightful social analyses, the compilation reflects the breadth and depth of Deanship's research endeavors.

The book encompasses a wide range of disciplines, including but not limited to natural sciences, social sciences, humanities, engineering, and technology. By encompassing such a diverse spectrum of knowledge, the Deanship underscores its commitment to fostering a holistic understanding of the world and addressing complex challenges from multiple perspectives. This interdisciplinary approach not only fuels innovation but also facilitates the development of well-rounded researchers who can make meaningful contributions to society.

Moreover, the research book serves as a platform for knowledge dissemination, enabling researchers to share their findings with a global audience. By promoting the exchange of ideas and fostering intellectual dialogue, Deanship actively contributes to the growth and development of the scientific and scholarly community at large.

As readers delve into the chapters of this research book, they will witness the transformative power of research—how it illuminates the unknown, challenges conventional wisdom, and propels humanity forward. The work presented within these pages represents the culmination of countless hours of dedication, perseverance, and intellectual curiosity. It is a testament to the collective effort and intellectual prowess of the researchers who have embraced Deanship's vision of excellence. Finally, this research book serves as a tangible testament to the Deanship of Postgraduate Studies and Research's enduring commitment to advancing knowledge and nurturing innovation.

It is a celebration of the remarkable contributions made by its researchers and an invitation for readers to embark on a journey of discovery, inspiration, and intellectual growth. May this compilation of research serve as a catalyst for further exploration, collaboration, and the continuous pursuit of knowledge, ultimately shaping a brighter and more enlightened future for all.

Prof. Mahmoud Abdel-Aty
Acting Dean / Postgraduate and Research
Ahlia University

ABSTRACTS

Empowerment Sustainability Perspectives For Bahraini Women As Entrepreneurs

Authors <ul style="list-style-type: none">Alsaad R.I.Hamdan A.Binsaddig R.Kanan M.A.	Abstract <p>The key objectives of this study were to investigate the factors that empower women entrepreneurs in the Kingdom of Bahrain and to measure the impacts of such factors on their business development and growth. The four main factors covered in this study were gender equality, quality education, sociocultural, and policies.</p> <p>The quantitative method was adopted to obtain the results of a structured survey distributed among 449 women entrepreneurs in the Kingdom of Bahrain registered in the United Nations Industrial Development Organization.</p> <p>The quantitative results of the study showed the importance of empowering women entrepreneurs in business activities in the Kingdom of Bahrain, which leads to their development and the country's economic growth.</p> <p>The findings confirmed the existence and significant impact of three factors, which are quality education, sociocultural, and policies, that empower and support women to start businesses in the Kingdom of Bahrain.</p> <p>No significant effect of the gender equality factor was distinguished. Empowerment and institutional theories were found to be relevant to the context of empowering women as entrepreneurs.</p> <p>The research provided recommendations, such as reinforcing policies that empower entrepreneurs, to enhance the empowerment of women entrepreneurship in the Kingdom of Bahrain.</p> <p>© 2023 China Ordnance Society</p>

Being Socially Present In A Time Of Social Distancing: Investigating The Online Social Learning Experiences Of Teacher-Trainees During Covid-19

Authors <ul style="list-style-type: none">Almahdi M.H.Al Murshidi G.Al-Mahdi O.	Abstract <p>Purpose: This paper investigates the social online learning experiences of teacher trainees during the COVID-19 pandemic. The study's model gauges the relationships between social presence, sense of community, and collaborative learning in online work-based learning environments.</p> <p>Design/methodology/approach: This study uses a cross-sectional design, specifically an online questionnaire, to collect data from teacher-trainees in different years of their university programs.</p> <p>Findings: The findings indicate significant and positive relationships between social presence and both sense of community and collaborative learning, and between collaborative learning and sense of community in a work-based online learning environment. These insights are especially important in a time when online learning has become a necessity rather than a choice and when students are in dire need of social support and community.</p> <p>© 2023 China Ordnance Society</p>

Socio-Economic Assessing Of Researcher’s Perceptions And Farmer’s Willingness To Adopt Silage Technology In Palestine-West Bank

Authors <ul style="list-style-type: none">Istaitih Y.Alsadi S.Elrashidi A.Kanan M.Al-Sartawi A.Asad J.	Abstract <p>In this paper the animal breeder in Palestine has many challenges including high feed prices, high-cost input, low-quality pasture, limited access to rangeland with high quality, and high cost of feed.</p> <p>In Tubas and Tulkarm areas, extensive irrigated agriculture is dominant. Large quantities of agricultural by-products are wasted. As one of the important interventions to decrease feeding costs, the study focused on silage technology adoption from the view of researchers and farmers.</p> <p>It meant using these agricultural by-products to make them beneficial and eatable for the animal. On the one hand, we removed these by-products from the environment and second, we fed to animals and ultimately, we reduced the input cost of animal feed.</p> <p>The main objective is to improve dissemination strategies and approaches that promote the adoption of silage technologies by identifying both researcher and farmer perceptions and constraints. A field `survey was conducted targeting 70 farmers (35 have knowledge and practice silage technology and 35 do not) from Tubas and Tulkarm areas.</p>

Using Markov Chains And Data Mining Techniques To Predict Students’ Academic Performance

Authors <ul style="list-style-type: none">Mallak S.Kanan M.Al-Ramahi N.Qedan A.Khalilia H.Khassati A.Wannan R.Mara’beh M.Alsadi S.Al-Sartawi A.	Abstract <p>In this study, the academic performance of students from the E-Commerce department at Palestine Technical University – Kadoorie is predicted using a Markov chains model and educational data mining.</p> <p>Based on the complete data regarding the achievements of the students from the 2016 cohort of students obtained from the university’s admissions and registration department, a Markov chain is built, in which the states are divided according to the semester average of the student, and the ratio of students in each state is calculated in the long run.</p> <p>The results obtained are compared with the data from the 2015 cohort, which demonstrates the efficiency of the Markov chains model. For educational data mining, the classification technique is applied, and the decision tree algorithm is used to predict the academic performance of the students, generalizing results with an accuracy of 41.67%.</p> <p>© 2023 NSP Natural Sciences Publishing Cor.</p>

Using Chatgpt And Other Lims In Professional Environments

Authors

- Alaswad S.
- Kalganova T.
- Awad W.S.

Abstract

Large language models like ChatGPT, Google’s Bard, and Microsoft’s new Bing, to name a few, are developing rapidly in recent years, becoming very popular in different environments, and supporting a wide range of tasks.

A deep look into their outcomes reveals several limitations and challenges that can be further improved. The main challenge of these models is the possibility of generating biased or inaccurate results, since these models rely on large amounts of data with no access to unpublic information.

Moreover, these language models need to be properly monitored and trained to prevent generating inappropriate or offensive content and to ensure that they are used ethically and safely.

This study investigates the use of ChatGPT and other large language models such as Blender, and BERT in professional environments. It has been found that none of the large language models, including ChatGPT, have been used in unstructured dialogues.

Moreover, involving the models in professional environments requires extensive training and monitoring by domain professionals or fine-tuning through API.

Ownership Concentration And Audit Actions

Authors

- Al Lawati H.
- Sanad Z.

Abstract

This study presents current evidence on the impact of different corporate ownership types on audit quality in Oman and potentially in other developing countries with similar institutional environments, such as GCC countries.

While previous research has primarily focused on overall ownership concentration, this study aims to examine the role of specific shareholder identities and their influence on the demand for audit quality.

This research sheds light on the relationship between ownership identities and audit quality of Omani financial companies listed on the Muscat Stock Exchange from 2014 to 2020. This study employs additional analysis to mitigate potential confounding factors and ensure robust results.

Additionally, a GMM test establishes the robustness of our findings, alleviating potential endogeneity concerns. The findings highlight the positive impact and significance of bank, government, and foreign ownership in promoting high audit quality. In contrast, ownership by financial institutions (non-banks) and block holder concentrations negatively and significantly impact audit quality.

In addition, this study found that family members on boards play positive moderating roles in the relationship between ownership concentration and audit quality.

Adoption Of Renewable Energy Sources And Sustainable Performance In Palestinian Industrial And Commercial Sectors With Governmental Role As A Moderator: An Explanatory Approach

<div>Authors</div> <div><ul style="list-style-type: none">Salem I.Saleh Y.Alsayed M.F.Assaf R.Kanan M.Musleh Al-Sartawi A.M.A.BinSaddig R.</div>	<div>Abstract</div> <div><p>Renewable energy has attained enormous attention in recent years due to the exhaustion of many energy resources, and the pollution caused by fossil fuels.</p><p>However, the adoption of renewable energy sources (RESs) is a complicated process influenced by multifarious factors. This study aims to investigate factors influencing the adoption of RESs by the Palestinian industrial and commercial sectors and their effect of this adoption on sustainable performance, besides examining if the government plays a role in moderating the relationship between the adoption of RESs and such sustainable performance.</p><p>To this end, a quantitative method was used to collect data through questionnaires from 100 top managers in the Palestinian commercial and industrial sectors. The data analysis was conducted using the Smart PLS software to test the formulated hypotheses.</p><p>The findings support the positive relationship between the adoption of RESs and sustainable performance.</p><p>© 2023 The Authors</p></div>

Minimal Reconstructibility Of Boolean Control Networks

Auth ors

- Li X.
- Liu Y.
- Cao J.
- Abdel-Aty M.

Abstract

This article studies the minimal reconstructibility of Boolean control networks (BCNs) based on the semi-tensor product (STP).

Two effective criteria for the reconstructibility of BCNs under two definitions are proposed by using weak control invariant subset (WCIS) and strong control invariant subset (SCIS).

By injecting new measurements, a minimal reconstructibility problem (MRP) is established for achieving reconstructibility. Based on constructing an index matrix, the solution of the MRP is transformed into the solution of the equation.

Finally, a biological example is given to illustrate the theoretical results and further emphasize the inequivalence of the two definitions.

A Review On Epidemic Models In Sight Of Fractional Calculus

Authors

- Nisar K.S.
- Farman M.
- Abdel-Aty M.
- Cao J.

Abstract

Biomathematics has become one of the most significant areas of research as a result of interdisciplinary study. Chronic diseases sometimes referred to as non-communicable and communicable diseases, are conditions that develop over an extended period as a result of different factors like genetics, lifestyle, and environment. The most important common types of disease are cardiovascular, alcohol, cancer, and diabetes. More than three-quarters of the world's (31.4 million) deaths occur in low- and middle-income nations, which are disproportionately affected by different infections. Fractional Calculus is a prominent topic for research within the discipline of Applied Mathematics due to its usefulness in solving problems in many different branches of science, engineering, and medicine. Recent researchers have identified the importance of mathematical tools in various disease models as being very useful to study the dynamics with the help of fractional and integer calculus modeling. Due to the complexity of the underlying connections, both deterministic and stochastic epidemiological models are founded on an inadequate understanding of the infectious network. Over the past several years, the use of different fractional operators to model the problem has grown, and it is now a common way to study how epidemics spread. Recently, researchers have actively considered fractional calculus to study different diseases like COVID-19, cancer, TB, HIV, dengue fever, diabetes, cholera, pine welts, smoking and heart attacks, etc. With the help of fractional operator, we modified a mathematical model for the dynamical transmission, analysis, treatment, vaccination, and precaution leveling necessary to mitigate the negative impact of illness on society in the long run, overcoming the memory effect without defining or considering others parameters. In this review paper, we considered all the recent studies based on the fractional modeling of infectious and non-infectious diseases with different fractional operators such as Caputo, Caputo Fabrizio, ABC, and constant proportional with Caputo, etc. This review paper aims to bring all the information together by considering different fractional operators and their uses in the field of infectious disease modeling. The steps taken to accomplish the goal were developing a mathematical model, identifying the equilibrium point, figuring out the minimal reproductive number, and assessing the stability around the equilibrium point. For future direction, we consider the cancer model to study the growth cells of cancer and the impact of therapy to control infections. An equilibrium solution and an analysis of the behavior dynamics of the cell spread with treatment in the form of chemotherapy were obtained. The simulation shows that the population of cancer cells is influenced by the pace of cancer cell growth with the Caputo fractional derivative. The acquired results show how effective and precise the suggested approach is in helping to better understand how chemotherapy works. Chemotherapy medications have been found to increase immunity against particular cancer by reducing the number of tumor cells. Further, we suggested some future work directions with the help of the new hybrid fractional operator. Our innovative methodology might have significant effects on global stakeholders, policymakers, and national health systems. The current strategies for controlling outbreaks and the vaccination and prevention policies that have been implemented would benefit from a more accurate representation of the dynamics of contagious diseases, which necessitates the development of highly complex mathematical models. Microorganisms, interactions between individuals or groups, and environmental, social, economic, and demographic factors on a broader scale are all examples.

Abstract

The implementation of lean manufacturing to increase productivity often neglects the impact on the environment and the well-being of employees. This can result in negative consequences such as environmental harm and poor employee satisfaction.

To address this issue, an integrated ergo-green-lean conceptual model was developed in the literature. However, no case study has been conducted to support this model. Therefore, this research aims to investigate the practical outcomes of implementing the integrated framework in an automobile parts industry.

Key performance indicators (KPIs) were identified, including ergonomic risk score, job satisfaction, carbon footprint emission both from direct energy consumption and material wastage, cycle time, lead time, die setup time, and rejection rate.

Various assessment techniques were employed, such as the rapid entire body assessment (REBA) with the Standard Nordic Questionnaire (SNQ), job stress survey, carbon footprint analysis (CFA), and value stream mapping (VSM) to evaluate the KPIs at the pre- and post-intervention phases. © 2023 by the authors.

Novel Entropic Dynamics Of Donor-Acceptor Quantum Dot System

Authors

- Abo-Kahla D.A.M.
- Raddadi M.H.
- Abdel-Aty A.-H.
- Abdel-Aty M.
- Eleuch H.

Abstract

We explore various aspects of the entropy of the donor-acceptor QD system (GaAs – (Ga, Al)As) under the effect of terahertz excitation and magnetic field. We solve the optical Bloch equations of the system in presence of the total dephasing rate.

The analysis illustrate the presence of the sudden death and sudden birth of entropy. It is shown that these phenomena can be controlled using system parameters and likewise determining the influence of the magnetic field on the donor-acceptor system.

By selectively choosing the system’s parameters, it is possible to control the dynamics of entropy.

Quantum Control Of A Nonlinear Time-Dependent Interaction Of A Damped Three-Level Atom

Authors

- Korashy S.
- Abdel-Aty M.

Abstract

We investigate some new aspects of the nonlinear interaction between a three-level (Formula presented.) -type atom and bimodal field. The photon-assisted atomic phase damping, detuning parameter, Kerr nonlinearity and the time-dependent coupling have been considered.

The general solution has been obtained by using the Schrödinger equation when the atom and the field are initially prepared in the excited state and coherent state, respectively. The atomic population inversion and concurrence are discussed.

It is shown that the time-dependent coupling parameter and the detuning parameter can be considered as quantum controller parameters of the atomic population inversion and quantum entanglement in the considered model.

An Optimization Model For A Sustainable Closed-Loop Supply Chain Considering Efficient Supplier Selection And Total Quantity Discount Policies

Authors

- Assaf R.
- Hamdan A.
- Abu-Saq Z.
- Zahran S.

Abstract

This paper addresses the sustainable closed-loop supply chain (SCLSC) design problem regarding selecting a supplier under total quantity discount with demand uncertainty and logistic flow uncertainty.

The proposed model considers the three pillars of sustainability: the economic, environmental, and social realms. The model deals with the costs incurred by products-related manufacturing and minimizes the carbon dioxide emissions resulting from different manufacturing processes, as well as the attendant rate of injuries among the workers.

Python edition 2019-07 software with the SCIPY solver was used to solve the model, using a sequential least squares programming algorithm (SLSQP) to obtain optimal solutions. A numerical study was conducted to validate the model.

A sensitivity analysis was conducted to address the effects of both types of uncertainty on the optimal solution. It was found that the effect of a high rate of demand uncertainty is more severe than the effect of the uncertainty of the flow logistics in the reverse direction since the former generated a lower value of the optimal solution than the worst-case scenario generated by the uncertainty budget.

Promoting The Advocacy Behavior Of Customers Through Corporate Social Responsibility: The Role Of Brand Admiration

Authors

- Ahmad N.
- Ullah Z.
- AIDhaen E.
- Siddique I.

Abstract

Given that personal source of information is preferred by the customers over company-generated marketing communications, promoting advocacy behavior among customers is of much importance for every organization.

Literature suggests that an organization’s corporate social responsibility (CSR) activities significantly influence individual behavior. However, the advocacy behavior of customers (ADB), from a CSR perspective, did not receive due attention.

To address this literature gap, the current study attempts to explore the relationship among CSR and ADB with the intervening role of brand admiration (BA). To collect the data, customers of a large fast-food service organization in Pakistan were approached.

The proposed relationships were tested through the structural equation modeling (SEM) technique. The statistical evidence verifies a positive link between CSR and ADB, while BA mediated this relationship.

These findings will be supportive to the fast-food business to realize the critical role of CSR for a meaningful customer-company relationship in the face of competition.

Turiyam Graphs And Its Applications

Authors

- Ganati G.A.
- Rao Repalle V.N.S.

- Amini M.

Abstract

The single valued neutrosophic set (SVNS) was developed to handle uncertainty in information depending on independent states called truth, indeterminacy and false.

Recently, the Turiyam set was introduced for dealing with the uncertainty in data sets when those states are in silent mode based on human quantum cognition or awareness. In this way, this set gives a way to explore the uncertainty in data sets beyond the existing true, false, and indeterminacy regions.

The precise analysis of data with the Turiyam set and its graphical representation is indeed a requirement for knowledge processing tasks. To achieve this goal, the current paper introduces Turiyam graphs with illustrations.

In addition, we define a complete Turiyam graph, a strong Turiyam graph, and a constant Turiyam graph. Further, we apply a constant Turiyam graph to the Wi-Fi system.

Relevance And Rigour In Management Education – Gulf Universities And Information On Standards

Authors

- Aldhaen E.
- Stone M.
- Evans G.
- Alhawaj A.

Abstract

International accreditation is becoming an important priority for many universities. In Gulf Cooperation Council (GCC) countries, internationalisation is increasingly becoming an issue of concern, with international accreditation considered a strategic objective that is expected to help higher education institutions (HEIs) cope with increasing competition from both public and private counterparts.

Within the context of business schools, accreditation is also expected to drive impact on the wider Gulf economies, particularly in the post-oil era.

HEIs are faced with a question as to whether they should adopt international standards outright, as proposed by accreditation bodies such as the Association to Advance Collegiate Schools of Business (AACSB), or whether they should focus on the adoption of an education management approach based on their own views as to the requirements of their respective countries.

This article uses a case study of the Kingdom of Bahrain to explore possible ways forward. This paper utilises a combination of academic literature, published practices of AACSB accredited business schools, in addition to research into standards information.

Abstract

Various industries around the world recognize the importance of achieving Net Zero Greenhouse Gases (GHG) emission by 2050. Industrial processes have been attributed to the increase in CO2 concentrations causing climate change.

As the rate of emissions continues to increase, there becomes a pressing need to adopt new technologies that allow for a real shift towards emission reduction. In this paper, Carbon Capture (CC) technologies are explored and reviewed across various industries namely: cement, steel, ethanol and powerplants.

A statistical representation of various CC implementations and facilities is presented with a supportive case study, including some evaluative discussions of energy demands, capture rates, and economic impacts of various technology adoptions.

Moreover, the paper includes a comparative data analysis of various solvents and configurations used for carbon capture, to show their effectiveness in reducing CO2 and cost of implementation. The paper also discusses some crucial limitations and challenges of CC, including economic and technical aspects.

Sustainably Developing In A Digital World: Harnessing Artificial Intelligence To Meet The Imperatives Of Work-Based Learning In Industry 5.0

Authors

- Al Mubarak M.

Abstract

Purpose: Mainly in terms of human-machine interactions, this paper discusses salient issues related to work-based learning in reference to technologies in the Industry 5.0 era.

Design/methodology/approach: Several ideas are discussed based on recent thinking in the topic, putting forward visions that are likely to happen with Industry 5.0 revolution with prime focus on human-machine interactions.

Findings: The review elucidated a plethora of benefits in terms of human-machine interactions inasmuch as technology complements rather than replaces human efforts that includes enhancement of: efficiency and production, job security and skill-upgrading. To engender these benefits, however, legal, psychological, and ethical issues need to be transcended on the managerial level.

Practical implications: Positive externalities, associated with efficiency and production, are now possible with human-machine interactions without cost in terms of jobs being lost provided that skills are upgraded commensurate with the challenges posed by the new technological era.

Social implications: People can benefit from life improvements and elevated standards of living stemming from robotics though optimization of the use of technology.

Originality: This paper presents original ideas on how Industry 5.0 technologies can be harnessed to buoy sustainable development by striking an optimal balance between human and technological capital.

Sentiment Analysis Of Multilingual Dataset Of Bahraini Dialects, Arabic, And English

Authors

- Omran T.
- Sharef B.
- Grosan C.
- Li Y.

Abstract

Sentiment analysis is an application of natural language processing (NLP) that requires a machine learning algorithm and a dataset. In some cases, the dataset availability is scarce, particularly with Arabic dialects, precisely the Bahraini ones, which necessitates using an approach such as translation, where a rich source language is exploited to create the target language dataset.

In this study, a dataset of Amazon product reviews in Bahraini dialects is presented. This dataset was generated using two cascading stages of translation—a machine translation followed by a manual one.

Machine translation was applied using Google Translate to translate English Amazon product reviews into Standard Arabic. In contrast, the manual approach was applied to translate the resulting Arabic reviews into Bahraini ones by qualified native speakers utilizing constructed customized forms.

The resulting parallel dataset of English, Standard Arabic, and Bahraini dialects is called English_Modern Standard Arabic_Bahraini Dialects product reviews for sentiment analysis “E_MSA_BDs-PR-SA”.

The dataset is balanced, composed of 2500 positive and 2500 negative reviews. The sentiment analysis process was implemented using a stacked LSTM deep learning model.

The Bahraini dialect product dataset can be utilized in the transfer learning process for sentimentally analyzing another dataset in Bahraini dialects.

Abstract

This investigation delves into the effectiveness of employing vegetable-based cutting fluids and nanoparticles in milling AZ31 magnesium alloy, as part of the pursuit of ecologically sustainable manufacturing practices.

The study scrutinizes three different cutting environments: (i) dry cutting; (ii) minimum quantity lubrication (MQL) with rice bran oil as the base oil and turmeric oil as an additive; and (iii) MQL with rice bran oil as the base oil, and turmeric oil and kaolinite nanoparticles as additives.

Fuzzy logic was implemented to develop the design of experiments and assess the impact of these cutting environments on carbon emissions, surface quality, and microhardness.

Upon conducting an analysis of variance (ANOVA), it was determined that all the three input parameters (cutting environment, cutting speed, and feed) greatly affect carbon emissions.

The third cutting environment (MQL + bio-oils + kaolinite) generated the lowest carbon emissions (average of 9.21 ppm) and surface roughness value (0.3 um).

Confirmatory tests validated that the output parameters predicted using the multiobjective genetic algorithm aligned well with experimental values, thus affirming the algorithm’s robustness.

Abstract

Brain tumors are one of the deadliest diseases, with numerous implications on human health. A brain tumor is an abnormal cell mass or growth in or around the brain.

They are not all cancerous, as they might be benign or malignant. Doctors use a variety of diagnostic techniques to assess the presence of a benign or malignant brain tumor, as well as to estimate its size, location, and growth rate.

The proper diagnostic modality is used to provide a complete view of the brain to detect any abnormalities. A computed tomographic (CT) scan of the brain shall be done to check the abnormalities.

The benefits of CT scans include accurate detection of calcification, hemorrhage, and bone detail, as well as low cost compared to magnetic resonance imaging (MRI).

Therefore, we examine a proposed CT-based detection method to determine whether brain tumor is present or not. The proposed method works on a CT image dataset that collected from Mansoura University hospital. Different pre-trained models are used: VGG-16, ResNet-50, and MobileNet-V2.

Comparing the results, that pre-train model MobileNet-V2, despite having the lowest number of parameters, yields better results. It gives an accuracy 97.6%, while its precision, recall, and F1-score values are 96%, 95%, and 96%, respectively.

Corporate Social Responsibility Disclosure And Banks’ Performance: The Role Of Economic Performance And Institutional Quality

Authors

- AlAjmi J.
- Buallay A.
- Saudagaran S.

Abstract

Purpose: This study aims to examine the moderating role of a country’s economic activities and institutional quality (IQ) on the relationship between corporate social responsibility disclosure (CSRД) and banks’ operational, financial and market performance.

Design/methodology/approach: This study examines 245 banks from emerging markets for 13 years (2008–2020), yielding unbalanced panel of 1899 bank-year observations. The independent variable is CSRД. The dependent variables are return on asset (ROA), return on equity (ROE) and Tobin Q. The authors used ordinary least square (OLS), panel fixed-effect and instrumental variables-generalized method of moments (IV-GMM) to estimate the parameters of the models.

Findings: The authors find that the CSRД scores negatively influence banks’ performance. The moderator of CSRД and the level of economic activities have a positive relationship with banks’ performance. However, the moderator (CSRД and IQ), while showing positive relationship with banks’ performance, has a significant effect only on banks’ operational and financial performance.

Originality/value: This study provides new evidence on the ways in which economic performance and IQ (IQ) influence the CSRД practices of banks in emerging markets.

Donors’ Attitude Towards Fundraising Efforts In UAE During Covid-19 Pandemic: The Moderating Role Of Ethics

Authors

- Sarea A.
- Raza Rabbani M.
- Rahiman H.U.
- Echchabi A.

Abstract

Purpose: This study aims to explore the antecedents of donors’ attitudes toward fundraising campaigns to fight COVID-19 in the United Arab Emirates (UAE) during the pandemic crisis. This manuscript identified how moderating effects of ethical dimensions can strengthen the relationship between trust in charity and charity projects with their attitude to raise funds to mitigate pandemic repercussions.

Design/methodology/approach: This study follows a quantitative approach by administering survey instruments to collect the data from the sample of respondents. A total of 391 responses were obtained adopting snowball sampling and analyzed through structural equation modeling (SEM) to derive meaningful results for path analysis.

Findings: The findings of this study indicate that certain insights need to be considered to trigger the donors’ attitude toward raising or participating in charity-oriented campaigns, especially during pandemic situations. For instance, organizing more transformable processes in charity projects and establishing more trust factors among donors is highly essential .

The Adoption Of AAOIFI Standards By Islamic Banks: Understanding The Microeconomic Consequences

Authors

- Elhalaby S.
- Sarea A.
- Alnesafi A.
- Al-Absy M.S.M.

Abstract

This study seeks to measure the microeconomic consequences of the adoption of the Accounting and Auditing Organisation for Islamic Financial Institutions (AAOIFI) standards on the conservatism, financial performance (FP), and earnings management (EM) of Islamic banks (IBs).

The study draws on data from 122 IBs across 22 countries over a period of eight years (2014–2021), using the generalised method of moments (GMM). The results indicate a positive impact of AAOIFI adoption on financial performance and conservatism compared to non-adopters.

Our results further show that IBs that adopt AAOIFI are less involved in EM. After applying robustness checks (corporate governance, inflation, and mandatory adoption of AAOIFI in some countries), our results remain the same.

The implications of the study are potentially valuable for those setting accounting standards (such as AAOIFI and International Accounting Standards Board (IASB)), central banks, financial market regulators, investors, governments, and any adopting or non-adopting Islamic financial institutions (IFIs) through identification of the effects of AAOIFI adoption.

Quantum Entanglement Versus Skew Information Correlations In Dipole–Dipole System Under KSEA And DM Interactions

Authors

- Elghaayda S.
- Khedr A.N.
- Tammam M.
- Mansour M.
- Abdel-Aty M.

Abstract

In this manuscript, we explore the characteristics of thermal entanglement and skew information correlations in a dipolar coupled-spins system subjected to the combined effect of Kaplan–Shekhtman–Entin–Wohlman–Aharony (KSEA) and Dzyaloshinsky–Moriya (DM) interactions in the presence of an external homogenous magnetic field.

We employ logarithmic negativity (LN) to characterize the degree of entanglement. Under the thermal reservoir effect, uncertainty-induced non-locality (UIN) and local quantum uncertainty (LQU) are both utilized to evaluate skew information correlations in the investigated system.

The variations of the logarithmic negativity and skew information quantifiers are studied in terms of the equilibrium temperature, the dipolar coupling strengths among the two linked spins, DM and KSEA coupling parameters, and the intensity of the homogeneous magnetic field.

The findings reveal that the non-classical correlations seen between two linked spins may be adjusted by changing the dipolar interaction coupling strengths between the coupled spins, the intensity of KSEA interaction and the strength of the homogeneous magnetic field B.

In addition, our findings demonstrate that the skew information correlations tolerate thermal noise better than entanglement and that LQU and UIN quantifiers disclose more non-classical correlations beyond the LN in the dipole–dipole two-spin system. Our findings also confirm that the UIN is more resistant than the LQU against rising temperatures.

A Study On The Impact Of Integrating Reinforcement Learning For Channel Prediction And Power Allocation Scheme In MISO-NOMA System

Authors

- Gaballa M.
- Abbod M.
- Aldallal A.

Abstract

In this study, the influence of adopting Reinforcement Learning (RL) to predict the channel parameters for user devices in a Power Domain Multi-Input Single-Output Non-Orthogonal Multiple Access (MISO-NOMA) system is inspected.

In the channel prediction-based RL approach, the Q-learning algorithm is developed and incorporated into the NOMA system so that the developed Q-model can be employed to predict the channel coefficients for every user device.

The purpose of adopting the developed Q-learning procedure is to maximize the received downlink sum-rate and decrease the estimation loss. To satisfy this aim, the developed Q-algorithm is initialized using different channel statistics and then the algorithm is updated based on the interaction with the environment in order to approximate the channel coefficients for each device.

The predicted parameters are utilized at the receiver side to recover the desired data. Furthermore, based on maximizing the sum-rate of the examined user devices, the power factors for each user can be deduced analytically to allocate the optimal power factor for every user device in the system.

In addition, this work inspects how the channel prediction based on the developed Q-learning model, and the power allocation policy, can both be incorporated for the purpose of multiuser recognition in the examined MISO-NOMA system. Simulation results, based on several performance metrics, have demonstrated that the developed Q-learning algorithm can be a competitive algorithm.

Does It Pay To Be Green? Evidence From Banks In Emerging Markets

Authors

- Al-Ajmi J.
- Saudagaran S.
- Kukreja G.
- Fadel S.

Abstract

Purpose: The purpose of this study is twofold. The first is to examine the impact of environmental disclosure on banks’ performance, while the second is to investigate the moderating role of a country’s economic activities and institutional quality on the relationship between environmental activities disclosure and banks’ operational, financial and market performance.

Design/methodology/approach: The sample includes 246 banks from emerging markets from 2008 to 2020, comprising 1,899 bank-year observations. The independent regressors are environmental disclosure, two moderators and two sets of control (bank and country) variables. The dependent variables are return on assets, return on equity and Tobin’s Q. This study adopts ordinary least squares, panel fixed effect and instrumental variables generalized method of moments to estimate the parameters of the models.

Findings: This study reveals a negative relationship between environmental disclosure and bank performance, lending credence to the agency and neoclassical theories. The moderator regressors show positive influence on banks performance. The results indicate that it is difficult to make a business case for environmental commitment.

Practical implications: There is a need for effective monitoring by shareholders to ensure that funds allocated for environmental activities are spent wisely.

Originality/value: This study provides new evidence on the ways in which economic and institutional quality influence the environmental practices of banks in emerging and frontier markets.

Women On Boards: An Empirical Study On The Effects On Financial Performance And Corporate Social Responsibility

Authors

- Awwad B.S.
- Binsaddig R.
- Kanan M.
- Al Shirawi T.

Abstract

Purpose: The purpose of this study is to investigate whether there is a relationship between women’s presence on boards of directors and companies’ financial performance and corporate social responsibility (CSR) disclosure and, if so, whether this relationship is positive, negative or neutral.

Design/methodology/approach: The research sample included 47 companies listed on the Palestine Stock Exchange from 2010 to 2020. Panel regression analysis was used to examine the study’s hypothesis and achieve the study’s objectives.

Findings: The presence of women on the board of directors positively affects a company’s financial performance and disclosure of CSR. However, measuring the CSR disclosure sub-components separately shows a decrease in the disclosure index towards both the environment and employees. Moreover, the level of female representation on the boards of directors of the Palestinian companies studied is generally low.

Research limitations/implications: Concerning the study limitations, the sample, which comprised all companies listed on the Palestine Stock Exchange from 2010 to 2020, was small. Concerning the implications of the study results.

The Moderating Role Of Gamification Toward Intentions To Use Mobile Payments Applications In Bahrain: An Integrated Approach

Authors

- Akhtar M.A.
- Sarea A.
- Khan I.
- Khan K.A.
- Singh M.P.

Abstract

Purpose: Using an integrated theoretical model, this study aims to examine the moderating role of gamification in influencing intentions to use mobile payment applications in Bahrain.

Design/methodology/approach: The current examination happens to be the first approximation in the context of Bahrain wherein an extended TPB-based model integrating variables from TAM and UTAUT2 is used along with gamification and situational influence to examine the intentions to use m-payment applications.

Findings: The findings revealed that among the variates of the TPB, AT and PB significantly affect the intentions (IN) to use m-payment applications in Bahrain, but SN fails to affect intentions, similarly SI also fails to affect intentions thereby proving that the pandemic fails to drive the intention of the population under study toward using m-payment applications. However, when the application offers gamification (GM) features, SI significantly affects intentions through GM, thus experience along with situation drives intentions and this becomes the major theoretical contribution of the study.

Practical implications: This examination offers useful practical implications in the form of the findings revealing that GM affects intentions to use m-payment applications and that GM moderates the relationship between perceived risk (PR) and IN, as well as SI and IN, which can be used by the service providers to improve the user experience and achieve better acceptance of their application.

Originality/value: The novelty of the study lies in testing the integrated theoretical model in the context of a GCC nation, Bahrain.

Renewable Technologies: Solar Power And Wind Power Energy Utilization – Advantages And Disadvantages

Authors

- Ahmed B.
- Al Mubarak M.
- Khouj M.

Abstract

Several countries want to fully use renewable energy because it is a clean and limitless source compared to fossil fuels, which are a limited but efficient energy source. However, could renewable energy be a good replacement for fossil fuels?

This research discusses the different technologies used in renewable energy, specifically solar energy and wind energy. The paper will use a qualitative method to research and collect information on the technologies from previous studies.

Each technology’s historical background, technical mechanisms, advantages and disadvantages, and latest developments will be presented. The research concludes that previous studies on renewable technologies are insufficient in the long run because of the increased demand.

The study also advises finding alternative solutions or using diverse technologies to reduce the setbacks but with the same energy output.

Artificial Intelligence In Marketing: Concerns And Solutions

Authors

- Alammal A.H.
- Al Mubarak M.

Abstract

This paper studied the implementation of artificial intelligence (AI) in marketing while taking the privacy and security problems into consideration.

AI has been implemented in many fields to use human intelligent machines to perform our daily activities including education, traffic, public security, social governance, healthcare, finance, and building smart societies. The success of AI in many industries encouraged marketers to use it in marketing.

AI is used to improve marketing in websites and social media applications and to build models that can formulate marketing strategies and human intelligent decision-making. Several studies proved the success of implementing AI in marketing.

However, there are also risks and issues related to it. The main problem associated with AI in marketing is the privacy of the data collected from the customers, which forced some organizations to prevent implementing AI in their marketing strategy to save their reputation.

On the other hand, other organizations relied on AI to improve their marketing and gain a competitive advantage in the market. Several solutions are suggested to prevent or mitigate data privacy and security problems.

Based on the findings of this paper, companies should keep the customers data local while advertising, isolate the sensitive and confidential data from the cloud or use edge technology as a replacement for cloud storing, ensure that all software interacting with AI are secure, use authentication methods, and limit the access for customers’ confidential data for certain employees only.

The Higher Education Students’ Perception On Iot Acceptance As An Educational Facilitating Medium: Perception From Omani Context

Authors

- Taufiq-Hail G.A.-M.
- Al Farsi M.J.A.
- Sarea A.
- Al Shamsi I.R.H.

Abstract

The Internet has become the veins that stimulate the economies, business, as well as educational and industrial processes.

The Internet of Things (IoT) as an extension of the Internet and one of its emerging technologies is one of the promising technologies that infiltrated all aspects of our life especially education, whose platforms had to be digitized and made online earlier than anticipated due to the spread of the COVID-19 pandemic.

The higher education represented by the students at the Omani universities in this research has dearth of studies that focus on the student’s intention to use this technology.

Therefore, the main objectives are to investigate the role of perceived ease of use, perceived usefulness, and relationship with intention to use the IoT in the academic and nonacademic tasks as perceived by university students.

Also, relationship between ease of use and perceived usefulness is measured. PLS-SEM SmartPLS was used to analyze the relationships. Findings reveal a positive significant relationship between ease of use and behavior intention.

Also, ease of use emerged as a positive and significant factor in controlling perceived usefulness toward the intention to use the IoT. However, perceived usefulness showed non-significant relationship with behavior intention.

The Impact Of Smart Technologies On Sme Sustainability: The Mediation Effect Of Sustainability Strategy – Literature Review

Authors <ul style="list-style-type: none">AlZayani F.Hamdan A.Shoaib H.M.	Abstract <p>The purpose of this research is to investigate the influence of smart technologies on small and medium-sized enterprise (SME) sustainability, and to examine the mediation effect of the SME sustainability strategy in the relationship between smart technologies and the sustainable performance of SMEs in the Kingdom of Bahrain.</p> <p>According to scholars, the sustainability concept includes “environmental sustainability,” “social sustainability,” and “profitability” factors. The research concludes that smart technology has a positive effect on profitability while stabilizing the environment and social wellbeing performance.</p> <p>In addition, the SME sustainability strategy is critical for utilizing smart manufacturing in 4.0 technologies such as cloud computing and artificial intelligence.</p> <p>Also, the research found that the institution and division of innovation theories contribute as the lens of the study. Literature review gaps summarized that in Bahrain, there is a lack of research and statistical reports related to utilizing technology in SMEs..</p>

Impulse Buying Behaviors In A Digital World

Authors

- Almahdi M.H.
- Radhi J.
- Alhawaj F.
- Najeeb A.

Abstract

Impulse buying behaviors have received a lot of research attention over the years, starting with investigating customer experiences in brick-and-mortar stores in the 1950s and not ending with gauging customer impulse buying tendencies on the digital shopping platforms of today.

Indeed, marketers and scholars are interested in understanding more about the customers' motivations to engage in impulse buying behaviors, as they are tied to desirable marketing outcomes, including increased sales and profits. This paper presents an overview of impulse buying in a modern, digital world, based on a study of the literature.

It, first, defines the concept and highlights its different types. Following this, it contrasts offline impulse buying behaviors with impulse buying in e-commerce and social media platforms and discusses the factors that influence impulse buying in customers. Finally, the authors provide relevant recommendations for future research in the field of impulse buying behaviors.

Abstract

Artificial intelligence is now identified as a vital business potential in the world's rapidly changing economy.

Artificial intelligence, in particular, has a significant influence in a country's economic growth. According to numerous industry studies, there are considerable benefits to implementing AI in the workplace by many forms.

The Kingdom of Bahrain has encouraged organizations to adapt artificial intelligent field after it recognized the advantages of artificial intelligence in improving business processes.

This research uses a quantitative technique approach to find out what are the AI technologies that are currently being used in Bahrain, specifically in the manufacturing sector and identifying the factors that influence the company decision-makers to adapt the artificial intelligence.

It will also explore empirical studies in the adoption of artificial intelligence. A survey was distributed among the top managers and technical staff in the Kingdom of Bahrain's manufacturing organization. A sampling strategy based on continence was utilized.

This research examined at the components that affect artificial intelligence adoption. A systematic survey of 977 manufacturing organizations was conducted.

Design Education Outside The Classroom. A Comparative Study Between Two Case Studies With Industry-University Collaboration

Authors

- Alaali A.

Abstract

This paper presents the findings of a research study focused on industry-university collaborations within the design studio culture. The study utilized a mixed-methods approach, including a literature review and case studies, to investigate and identify lessons learned from university-industry collaborations for interior design students.

Two industry-university collaborations within AU were selected as case studies based on their relevance to the design courses offered in the BSID program. The case studies employed a mixed-methods approach, involving non-participant observations, students' reflection reports, and semi-structured interviews with instructors and industry staff members.

This research contributes to the understanding of industry-university collaborations within design studio culture and provides valuable insights for instructors, universities, and industry partners seeking to engage in such collaborations.

By highlighting the experiences of instructors at AU, we aim to provide insights into the benefits and challenges of industry-university collaborations for universities that are new to such partnerships.

The findings include the importance of embracing exposure and new partnerships, providing real-world experience, balancing autonomy and dependence, understanding the limitations of scope,

A New Multivariate Product Kernel Functions Of The Beta Polynomial Family

Authors
<ul style="list-style-type: none">Siloko I.U.Siloko E.A.Ojobor S.A.Awad W.S.Enoyoze E.Ishiekwene C.C.Ikpotokin O.Ogbeide E.M.

Abstract

Multivariate analysis of data is of wide applicability in data science especially in big data analytic due to the volume of concealed information to be analyzed.

Accurate analysis of multivariate variables is pertinent because predictions from analyzed data are good statistical indicators for making helpful decisions economically and industrially.

One of the statistical analytic tools for analyzing multidimensional observations is the kernel density estimator in data exploration and visualization. The functionality of the kernel depends on the kernel function and bandwidth which influences smoothness of estimates.

Several kernel functions and bandwidth selectors exist in literature; however novel estimators are being introduced to handle complex circumstances. This paper introduces a new multivariate beta kernel functions whose derivation is contingent on the product techniques.

The performances of the newly introduced and existing kernels are evaluated with a known objective function and the numerical results distinctly indicating that the introduced family transcended the traditional beta family.

Abstract

This study aims to shed light on the role of board interlocking and the resulting knowledge sharing among board members and the role of this in improving companies' performance.

This study provides theoretical evidence that the board interlocking can have an actual role in the knowledge sharing and transfer among board members from various industries and cultural, religious, educational backgrounds, and therefore this will have an important impact on improving the performance of the company by opening new ideas, markets and opportunities.

The current study can be the basis for a set of future studies that aim to identify the role of knowledge sharing and management at the level of the board of directors in improving the performance of companies.

Artificial Intelligence And Security Challenges

Authors

- Mseer I.N.
- Ahmed S.M.

Abstract

Big data processing, vast computing power, information technology, improved machine learning (ML) and deep learning (DL) algorithms are driving the recent growth in AI technologies.

With more conventional methods, Google would not have been able to reduce its field device management costs by 40% as much as it has by deploying deep-mind AI technologies. The energy sector can benefit from AI technology by utilizing the expanding opportunities that result from the use of the Internet of Things (IoT) and the incorporation of renewable energy sources. Supercomputers, power electronics, cyber technologies, information, and bi-directional connectivity between the control center and equipment are only a few of the sophisticated infrastructures available to the smart energy sector.

The infrastructures of the current electricity system are too old, ineffective, outdated, unreliable, and do not offer enough protection from fault circumstances. But energy production, distribution strategy, and financial sustainability are crucial for the world economy. The integration of renewable energy sources was not intended to be managed by the conventional power system (RES). Meeting the fluctuating demands of the power system is made more difficult by changes in the characteristics of RES (such as wind, solar, geothermal, and hydrogen).

The energy sector is undergoing a change thanks to recent developments in AI technologies, such as machine learning, deep learning, IoT, big data, etc. Many nations have implemented AI technology to carry out many types of jobs, including managing, predicting, and effective power system operations. Photovoltaic (PV) systems may be controlled effectively by inverters thanks to, which also improves the ability to track power points.

Artificial maximum power point tracking (MPPT) techniques are efficient and can improve performance compared to conventional MPPT techniques. Due of its simplicity and speed of calculation, particle swarm optimization for MPPT is preferred by swarm intelligence classes Predictive technologies are frequently used to anticipate load demand, electricity costs, generation from RES (such as wind, hydro, solar, and geothermal energy), as well as fossil fuels (such as oil, natural gas, and coal).

Probabilistic forecasting (forecasting future events, for example) and non-probabilistic forecasting (forecasting fuel purchase management, generation planning, distribution scheduling, various forms of investment programs, maintenance schedules, and security purposes) are both possible.

The Effect Of Mentorship And Funding Support On Entrepreneur’s Motivation In Bahrain

Authors

- Marsal H.A.
- Hamdan A.
- Aljazzar S.

Abstract

This paper discusses the effect of mentorship and funding support on entrepreneur’s motivation in Bahrain. Entrepreneurship plays an important part in a country’s growth for its innovation and creativity, which is seen as a stimulus to economic progress.

Mentorship and funding support contribute to creating an impact on the entrepreneurship journey. This article will look at a number of research publications and journal articles in order to explore the impact of mentorship on the entrepreneur’s motivation under which the mentoring function was clarified in addition to identify the effect of funding support as well.

The support provided by the Kingdom of Bahrain aimed to empower entrepreneurship, this article describes the government support programs and the mentorship programs that are currently available in the Kingdom of Bahrain.

Citizen Journalism: Technological And Digital Challenges

Authors

- Hassan A.
- Khouj M.

Abstract

This paper identifies the phenomenon of data journalism and its role in providing readers with relevant news and analytical insights.

This study highlights that with the profound changes that have occurred in information technology, journalists who deal with data need a working knowledge of mathematics and statistics while also having the capability to perform simple statistical analyses and support their reports with animated graphs, interactive maps, and infographics.

Additionally, the capability to create apps based on data from large databases can also prove advantageous to journalists.

- Aldoy M.K.
- Hamdan A.
- Al-Jabri Q.

Abstract

The COVID-19 pandemic has disrupted various aspects of the human civilisation as aspects such as the society, the economy as well as the education. This empirical research paper focuses on the disruptions caused by the COVID-19 pandemic in the education system around the world.

Similar to the other education or learning, the accounting education was also disrupted amid the pandemic. This paper examines and discusses how the digitisation of the accounting education has simplified the accounting education as well as ensured continuity.

Return On Expectations Of Jobseekers’ Training In The Employability Skills Program Of Bahrain

Authors

- Al-Emadi H.A.
- Hamdan A.
- Abualsaud D.

Abstract

The author of this chapter delved into existing literature concerning two independent variables that may or may not affect the dependent variable that is the main focus of the dissertation.

The two independent variables are jobseekers’ marketability to the labor market and Employer’s expectations of the Employability Skills Program of Bahrain. The dependent variable is the degree of effectiveness of the aforementioned Program.

Newly presented studies in peer reviewed journals imply that employability skills (or soft skills) are considered an absolute necessity by many Employers around the world.

Furthermore, previous works point toward a positive relationship between acquiring the required employability skills and getting employed. It is also apparent that, at present, Employers are generally unsatisfied with the level of soft skillsets fresh university graduates are offering during the candidates selection process.

However, there exists a noticeable literature gap (considering work done since 2017) concerning the effectiveness of vocational qualifications that offer employability skills programs tailored by internationally recognized awarding bodies.

Exploring E-Learning During And Post COVID-19 Pandemic

Authors

- Shaaban M.
- Alfayez M.
- Hamdan A.
- Bakir A.

Abstract

This study explored the subject of e-learning and its effectiveness in facing the challenges posed by the Covid-19 Pandemic.

It reviewed relevant literature focusing on social distancing period as a trigger of the sudden acceleration of e-learning, radically affecting the education, forcing educational institutions to close schools and rely on distance education strategies.

The findings suggest that there is an urgent need to reconsider educational processes, systems, and procedures to ensure that the educational process runs well during social distancing and post Pandemic periods.

Among these measures are adherence to social distancing by adopting distance learning strategies that provide material resources for schools and financially vulnerable families, and restructuring study time, curricula and delivery, as well as re-designing assessment and standards.

- Aljar H.
- Hamdan A.
- Binsaddig R.

Abstract

The purpose of the paper is to observe whether Covid-19 pandemic had an effect on accounting education.

Various literatures that were written in this context were analyzed. It was found that digitizing accounting information is accompanied with number of challenges to both students and the faculty.

However, the transformation from traditional learning to online learning has also presented immediate and long-term benefits. In addition, the role of faculty members in integrating technologies to deliver high quality online education.

Finally, the authors end up with suggestions for accounting education after Covid-19 pandemic.

- Shaker G.

Abstract

The current study aims to identify the role of artificial intelligence in education, specifically during the coronavirus crisis, and the teaching methods used in educational institutions.

The study concludes that the educational process is constantly searching for modern methods and strategies including the use of artificial intelligence—the technology of the current age, considering that it touches all areas of everyday life, starting with simple computers, infiltrating smart devices, electronic applications, and most complex devices.

It is within this intellectual context that this research paper explores the role of artificial intelligence in improving the quality of higher education.

The Accounting Education, Between Digitalization And The COVID-19 Crisis

Authors

- Husain E.J.
- Hamdan A.
- Binsaddig R.

Abstract

The study aimed to identify the nature and dimensions of digital accounting learning and to identify the foundations of the quality of accounting decision-making in light of the COVID-19 pandemic and the era of digitization.

And determine the nature of the relationship between digital accounting learning and the quality of accounting decision during the Covid-19 pandemic.

The researcher used the descriptive analytical method. The results concluded that increasing the knowledge output resulting from the process of learning digital accounting leads to an improvement in the quality of accounting decision-making in the business environment.

- Binsaddig R.

Abstract

Over the past decade, decentralized cryptocurrencies have gotten a lot of attention. With the creation of bitcoin in end of 2000s, bitcoin has created a disruption that has changed the power dynamic in money markets, that its results are still unknown to us, as their consciences are still to be seen in the future.

The advancement in artificial intelligence is hard to mess, especially with a lot of our decisions are left for an algorithm to decide for us what to watch (YouTube, Netflix etc.), what to buy (Amazon, Ali baba etc.), and what to eat (Talabat, UberEATS etc.).

We took raw data from the internet about the close prices of 600 cryptocurrencies and then feature engineered the data to suit our research better and to help us find the expected results we want.

The Artificial intelligence application used is provided by azure Machine Learning, utilizing both Machine Learning and deep learning, Virtual Machines and the data analysis applications that are built in azure.

The final results have met and exceeded our expectations reaching almost perfect predication in multiple experiments on different coins.

The Agile Adaptivity Of Educators And Their Strategic Influence On The Learner During COVID-19 Pandemic

Authors

- Ahmed N.S.J.I.
- Saberi M.A.
- Abusaq Z.

Abstract

Although much damage has come from the COVID-19 Pandemic, the world has simultaneously changed to better in various sectors such as the education sector. In early 2020, education systems across the globe were rushed to migrate to whatever digital technology available in record time.

During this transition, educators were noticed to have a positive impact on learners through the quality of academic support provided. One reason for this positive impact is the educator's ability to think outside the box and immediately come up with creative solutions to adapt to the sudden changes in the environment hence motivate the learners to improve their performance quality through highly coordinated supervision.

On a larger scale, such agility has lead to educational institutions' strategic agility hence adjusting and adapting to new innovative ideas. Recent research has demonstrated that such an approach to sudden and drastic changes are successful.

Through a critical review, this theoretical paper examines recent studies related to the role of educators and administrators in educational institutions as change catalysts in schools and universities during times of crisis, such as the present pandemic.

Results show the primary role of educators in the success of the e-learning mode of study imposed during the pandemic. Educators who were able to swiftly come up with creative ideas to engage learners, while on unfamiliar and unprecedented online platforms, caused better learners' achievement.

Therefore, the agility of educators in educational institutions has been found critical to creating a sense of change in other direct and relevant parties such as the university presidents and school principals, as well as alumni affairs, learners' admission, and the human resources department.

This paper also clarifies the possible consequences of education systems ignoring the importance of adding virtual learning to the educational methods mix.

Toward A Cashless Society: Assessing The Acceptance Of Bahrain Benefitpay Using TAM And SEM

<div>Authors</div> <div><div><div></div><div>Albastaki Y.A.</div></div></div>	<div>Abstract</div> <div><p>Purpose: The purpose of this paper is to explore how the technology acceptance model (TAM) and structural equation modeling (SEM) might be used to assess customer acceptance of financial apps aiming at paving the road for enabling a cashless society in the Kingdom of Bahrain.</p><p>Design/methodology/approach: Using a convenience sample of 600 users of the BenefitPay app in the Kingdom of Bahrain, this study used the quantitative research approach to obtain 427 usable responses. Following a descriptive study to establish a framework for the data and a subsequent inferential analysis using SEM with confirmatory factor analysis, the research hypotheses were tested.</p><p>Findings: The results of this study back up what is claimed in the TAM theory literature, which shows that banking customers in the Kingdom of Bahrain who use e-payment methods are more likely to use BenefitPay if it is both easy to use and useful. BenefitPay systems behavioral intention to use was also highly influenced by aspects like ease of use and usefulness, which enable the development of cashless societies.</p><p>Research limitations/implications: This research work contribution is described through exploring how a cashless society is developed using electronic apps by studying the case of the Kingdom of Bahrain. The Kingdom of Bahrain is unique, and hence the knowledge obtained from studying it cannot be applied mechanically to any other nation. Instead, the paper seeks to explain the motivations behind Bahrain's move toward a cashless society, to analyze the difficulties and potential benefits of this transition and to spark much-needed conversations on how having less cash or none would affect the economies. Bahrain's BenefitPay systems can be seen as a current pushing force toward cashless society; thus, understanding how people in the Kingdom of Bahrain adopt e-payment techniques is vital.</p><p>Originality/value: The TAM conceptual model is experimentally validated in this study using cutting-edge methods like SEM with value creation for banking sector management, making it stand out from similar research. This research may prove useful in laying the groundwork for a cashless society in the Kingdom of Bahrain by analyzing the key elements that affect the BenefitPay app.</p><p>© 2023, Emerald Publishing Limited.</p></div>

Carbon Dioxide Emissions And The Economic Growth: Competitiveness And Economic Development View

<div>Authors</div> <div><div><div></div></div><div><div>Hamdan A.</div></div></div>	<div>Abstract</div> <p>Purpose: This study aims to shed light on the experience of the United Arab Emirates (UAE) in balancing three main pillars: the environmental criteria, the reduction of CO2 emissions and the economic growth. Based on the environmental Kuznets curve (EKC) framework, it will assess the causal relationship between economic indicators such as gross domestic product (GDP) per capita, trade openness and energy use and environmental indicators such as CO2 emissions.</p> <p>Design/methodology/approach: The analysis relies on a period of 40 years (1981–2020) where data is extracted from the World Bank database. This study uses the unit root test for time series stationarity, the optimal lag length test, the “Johansen” test for co-integration and the vector error correction model.</p> <p>Findings: The paper concludes to two major findings. On a short-term basis, CO2 emissions and economic indicators are negatively correlated, whereas on a long-term basis, there is no association between CO2 emissions and economic indicators in the UAE.</p> <p>Research limitations/implications: The research ends with important recommendations. It illustrates the importance of rationalizing the use of primary resources and the necessity to embrace successful and efficient policies in the energy production.</p> <p>Practical implications: More specifically, UAE is urged to address the problem of CO2 emissions in the electricity sector and increase awareness of the use of environmentally friendly processes in the transport and industrial sectors. While setting their economic agendas, UAE are encouraged to meet environmental criteria and invest in renewable energy projects such as “Shams 1”, the largest solar power plant outside of Spain and the USA.</p> <p>Originality/value: The current study is significant in its research on the environmental impact of economic development, trade openness and energy use policies in the UAE. It uses CO2 emissions as an environmental proxy and evaluates the environmental policies adopted in the UAE to reduce its impact.</p> <div>© 2023, Emerald Publishing Limited.</div>

Impact Of Cloud Computing As A Digital Technology On SMEs Sustainability

Authors

- Al-Mutawa B.
- Saeed Al Mubarak M.M.

Abstract

Purpose: The purpose of this study is to investigate the adoption of cloud computing as a digital technology by small and medium enterprises (SMEs) and assess its impact on sustainability of such enterprises.

Design/methodology/approach: A model was developed that featured factors influencing SMEs sustainability. Primary quantitative data was gathered using a survey as an instrument. Total set of n = 387 responses were gathered using a convenience sampling method.

Findings: Findings reveal that cost reduction, ease of use, reliability and sharing and collaboration factors have significant statistical impacts on SMEs sustainability, whereas privacy and security factor has no significant statistical on SMEs sustainability.

Practical implications: The study poses significant implications on managers and SME development authority to create an inductive environment for technological support for SMEs' sustainability.

Originality/value: The study enhances SMEs' performance and sustainability by upgrading their existing information and communications technology as a digital infrastructure and benefiting from novel IT-based cloud revolution. Several studies have provided an understanding of the use of cloud computing services in SMEs but lack enough information about the challenges and impact on SMEs sustainability.

The Influence Of Digital Competence Of Academicians On Students' Engagement At University Level: Moderating Effect Of The Pandemic Outbreak

Authors

- Aldhaen E.

Abstract

Purpose: The purpose of this study is to investigate how the digital competence of academicians influences students' engagement in learning activities in the face of the pandemic outbreak. In addition to this, the paper investigates how digital competence influences each dimension of student engagement (cognitive, affective and behavioural).

Design/methodology/approach: A cross-sectional, quantitative and explanatory research design was used to conduct the study. Data were gathered with an adopted questionnaire administered to a randomly selected sample of 500 university faculty members who were not digitally literate prior to the outbreak of the pandemic. Apart from the goodness of data tests, inferential statistics were applied to test hypotheses.

Findings: Results indicate a significant influence of teachers' digital competence on student engagement and the pandemic outbreak positively moderates the relationship. Digital competence equally influences all three dimensions of student engagement.

Practical implications: The outbreak of COVID-19 made the adoption of digital life more compulsive and the nations with already available digital infrastructure and digital competence effectively minimized the adverse effect of social distancing as a result of the pandemic outbreak. Findings emphasize practitioners to focus on the digital capacity building of academicians and the provision of digital infrastructure to facilitate student engagement.

Social implications: Society is transforming into a hi-tech lifestyle and technological advancement is penetrating almost every sphere of life at an unprecedented pace. From the digitalization of day-to-day affairs to e-governance, the adoption of technology is becoming a new normal. The outbreak of the pandemic overtook academic institutions equally. So, the social distancing compelled academicians and other stakeholders of universities to switchover from in-campus classes to online classes. The findings enrich the existing body of literature by explaining how digital competence has a determining role in ensuring student engagement amid the COVID-19 outbreak.

Originality/value: This research is a seminal work, as it tests the influence of digital competence on student engagement with the moderating role of the pandemic outbreak. To the best of the author's knowledge, existing literature does not present this kind of research.

The Impact Of Data Augmentation On Sentiment Analysis Of Translated Textual Data

Authors

- Omran T.
- Sharef B.
- Grosan C.
- Li Y.

Abstract

Sentiment analysis is an application of natural language processing that requires an abundance of data that may not be achieved sometimes for some reason.

Data augmentation is one technique that deals with the lack of data by creating synthetic training data without adding new ones. It boosts model performance, especially with deep learning ones.

Despite its influential role in boosting the model performance, it attracted very little attention from the researchers of the Arabic NLP community, specifically with scarce language resources such as Arabic and its dialects.

In this study, one of the augmentation techniques called random swap was applied with LSTM deep learning model to classify three parallel datasets.

The three parallel datasets are Bahraini dialects, Modern Standard Arabic and English. The results show an improvement in the LSTM model by 14.06%, 12.57%, and 11.04% on Bahraini dialects, Modern Standard Arabic, and English datasets, respectively, when applying the augmentation technique over that of no application.

Abstract

Health has always been a vital concern of any society. Therefore, various countries invest significantly in the heath sector to acquire state of the art health infrastructure. It may be noted that not all the countries are economically strong to meet the growing need of health services.

Moreover, it is not possible that all countries have same medical experts available. In such case, patients have sometimes been shifted to other countries for treatments. This is an expensive process, whereas if the desired equipment is available locally, then it is possible to carryout treatment.

The problem with such an arrangement is that the expertise of medical doctors may sometimes not available locally, whereas they need to be the part of treatment or surgery.

The use of advanced technologies can help in achieving such goal. This research proposed and developed a simulator that can take voice commands to present visualized simulation for the guidance of the on-site surgeon to conduct surgery.

The surgery is supposed to be done in supervision of expert surgeon connected remotely and the instruction passed by remote surgeon is translated and simulated for better results in surgery.

The proposed simulator is devised and tested on four different types of surgeries and the results are very promising in achieving the desired goals.

Improving The Security Of E-Exam Systems

Authors

- Alnasser F.
- Elrashidi A.

Abstract

Though e-exams have their advantages like accuracy and speed reduced human intervention, there are some flaws as well.

These flaws are security threats, the same way as traditional exams are exposed to them such as cheating or unauthorized access.

Furthermore, e-exams are also exposed to threats like impersonation and tampering or accessing exam related data and information on servers.

As a result, there is a need to establish a strong security framework within the e-exam system that universities adopt, such that smooth and timely conduction of exams can take place.

The present study deals with such security threats of e-exam systems and provides a solution by proposing a new security framework, to deal with these threats. Based on the primary data, a security framework of e-exam system was proposed at university levels.

This security model aimed to mitigate the threats determined during the survey, along with the strategies and system requirements suggested by the survey respondents. The proposed framework provides security at two levels.

Firstly, at the university level using biometric authentication and user login authentication.

Automatic Content Searching Model During Blended Learning Class Sessions

<div>Authors</div> <div><div><div></div><div>Abdulkarim M.M.</div></div><div><div></div><div>Alsaeed M.</div></div><div><div></div><div>Safdar S.</div></div></div>	<div>Abstract</div> <div><p>Blended Learning is one of the emerging methods of teaching and learning these days. Its fame is due to the integration of both electronic as well as traditional teaching methods that has proven remarkable outcomes.</p><p>It is noted that the students require an access of additional resources while they attend their lectures. In e-learning they have this provision of searching related reference material either after their lecture class or they may do so in advance, if guided.</p><p>However, it may be noted that, having the reference material right at the time of ongoing lecture may help the student not to miss any important concept but also improves their learning experience.</p><p>The main objective of this research is to enhance the literature search by applying it during active lecture sessions. The research adapted the voice recognition system to acquire the keywords from instructor’s voice during lecture.</p><p>Stemming and TF -IDF is used to acquire relevant keywords that results in the formulation of desired key strings. The process has worked in background and produced significant results in comparison to traditional search methods.</p><p>© 2023 IEEE.</p></div>

Negative Impact Of Social Media Advertisements On Branding In Digital Marketing

Authors <ul style="list-style-type: none">Oriakhi O.P.Amin A.Safdar S.	Abstract <p>Due to the thriving nature of social media platforms and their continuous evolution over the internet, social media has become a place where people buy, sell and advertise their products.</p> <p>This forms the basis of digital marketing that thrives the business community with revolutionary business gains. Social media advertisements may sometimes yield different outcomes and resonances since there are some essential fundamentals that people need to be aware of while marketing over it.</p> <p>Considering a proper approach regarding content and audience, the presentation of the advertisement is crucial to deliver the targeted message. This research analyzes the social media advertisement factors such as negative comments/ opinions, fake news, and controversial brand posts that negatively impact brand image and purchase intention.</p> <p>The study is based on a questionnaire with participants comprised of 100 students currently enrolled at the University of Bristol. The research model and hypotheses formed for the study are tested with structural analysis.</p>

The Impact Of Smart Technologies On SMEs’ Sustainability: The Mediation Effect Of Sustainability Strategy

Authors <ul style="list-style-type: none">AlZayani F.Mohammed A.Shoaib H.M.	Abstract <p>Purpose: This study aims to investigate the influence of smart technologies on SMEs sustainability and to measure the mediation effect of SMEs’ sustainability strategy in the relationship between smart technologies and SMEs’ sustainable performance in the Kingdom of Bahrain. The sustainability concept for the purpose of this study includes environmental sustainability, social sustainability and profitability factors.</p> <p>Design/methodology/approach: The study applied the quantitative analysis method. The sample size was 403 small- and medium-sized enterprises (SMEs) from Bahrain.</p> <p>Findings: The study concludes that smart technology has a major effect on profitability performance, among other sustainable performance factors. In addition, there is no mediation effect of “SMEs’ sustainability strategy”. The study has recommended improving SMEs’ participation in sustainable development principles by considering supportive global initiatives to “Net Zero Roadmap 2050”, increasing the demand for using technologies and including academic “sustainability” concepts in academic programs.</p>

A Framework For Labor Market Analysis Using Machine Learning

Authors

- Alsayed N.
- Awad W.S.

Abstract

Combining machine learning and labor market data is advantageous for jobseekers, companies, and decision-makers.

Jobs in great demand in the future can be predicted using machine learning algorithms and data collected from the labor market.

This study highlights the importance of labor market analysis and the economic impact of merging machine learning with labor market analysis as media impacts the labor market.

This study presents a framework model recommended for analyzing online job postings and news to determine in-demand industries, occupations, and skills.

The study indicates that the framework simulates labor market intelligence where results are more efficient and give a faster examination of labor market trends-utilizing the news offered reliable insight into forthcoming labor market trends.

Fake News Detection: A Graph Mining Approach

Authors

- Hasan Ahmed Abdulla H.H.
- Abdulla H.H.

Abstract

The proliferation of the internet and social media has dramatically expanded the reach of information, but it has also made it easier for false information to be disseminated.

Automating the classification of misinformation and disinformation is a difficult task, as experts must consider multiple factors when determining the accuracy of an article.

This study employs a graph mining technique to identify fake news stories. The linguistic features examined differentiate fake content from credible information. The proposed method was tested using a dataset from the real world, and our experiments demonstrate that it performs similarly to existing fake news detection algorithms on this dataset.

COVID-19 Contact-Tracing Networks Datasets

Authors

- Moosa J.
- Awad W.
- Kalganova T.

Abstract

In this research paper, COVID-19 tracing data are utilized to form two dataset networks, one is based on the virus transition between the world countries, as the dataset consists of 36 countries and 75 relationships between them.

Whereas the other dataset is an attributed network based on the virus transition among the contact tracing in the Kingdom of Bahrain.

This type of networks that is concerned in tracking a disease or virus was not formed based on COVID-19 virus transmission.

Image Process Based Recommender System For Social Media Marketing

Authors

- Ali Alkhatib L.A.
- Subramanian S.

Abstract

Social media has become one of the most powerful marketing tools, particularly comments, emojis, and stickers plays vital role in increasing the company and products branding in the market.

The popularity of social media posts with images are getting increased steadily for the past few years, and social media posts with images receive more user attention than normal text posts.

The purpose of this research is to devise a recommender system that can evaluate the effectiveness of images, emojis, and stickers in promoting products on social media and use different image processing techniques such as neural networks to process the pixel-level details of an image and filtering images based on image quality assessment.

This research demonstrated the impact of emoji and text categorization on famous business Instagram accounts on cosmetics, personal care, and perfumes. CNN model was used in this research and it was found that images based social media postings are getting more comments and sales rather than text based postings.

The Factors Affecting Online Buying Behavior Of Consumers During Crises:
Literature Review

Authors

- Shaaban M.
- Hamdan A.
- Albakri R.

Abstract

The aim of this research paper is to understand the consumer buying behavior online during the crises. It is important to distinguish the factors that affect their online buying behavior. Many researchers have identified that consumer buying behavior is impulsive, it evaluates how emotion, thoughts and preference vary from consumer to consumer.

Nowadays, purchasing any product and services is clearly different from the past-days and it is extremely influenced by digital marketing as a successful tool for increasing good advantage.

The difference is that the consumers in the 21st century are more sophisticated, and better concerned with innovative technology and internet network. Whereas they search for any product and services detailed information easily and feedback from different consumers/users.

In order to achieve in today's world and the rapidly developing market, marketers need to understand everything about their consumers such as; what they want, what they need, what they work and finally how they want to spend their money and time.

Many factors influence consumers in his/her decision-making process, purchasing behavior and the selection of specific brand or merchant.

Abstract

This paper reviews how social media has impacted e-commerce and marketing. Social media has a big role today for companies and consumers.

Businesses use it for communication, marketing, and other ways to gain profit. The youth around the world are heavy users of social media, including for online purchases.

Therefore, businesses are increasingly employing social media within their companies to compete in this digital age.

The Importance Of Digital Marketing In Building Brand Loyalty

Authors

- Hassan A.
- Zahran S.

Abstract

Digital marketing is a module of marketing that is used to promote an organisation’s products and services through the use of the internet and digital technologies.

Brand loyalty is a positive feeling of consumers that dedicates them to purchase specific products or services. This study aims to identify the importance of digital marketing in building brand loyalty in the digital era.

The results of this study indicate that building brand loyalty depends primarily on trust.

The decision of customers to purchase a product may be made consciously or unconsciously, as it arises from an emotional engagement between consumers and the brand, based on their confidence that the brand will meet their needs.

The results also reveal the importance of the customer’s perception of the quality and value of a particular product compared to its competitors.

This adds a competitive advantage to a particular brand, which is a set of consumer feelings and feelings about the benefit and quality of a particular product.

Qr Code Encryption For Improving Bank Information And Confidentiality

Authors <ul style="list-style-type: none">Malallah F.L.Abduljabbar A.I.Shareef B.T.Al-Janaby A.O.	Abstract <p>Nowadays, storing confidential documents using cloud services is getting popular due to advantages regarding security and fast processing operations. One of the major services of cloud computing is cloud storage, which is conversely raises some issues regarding information security. Storing information for cooperation such as a bank in the cloud needs a fast processing operation to avoid any bottleneck in the work procedure.</p> <p>Therefore, Quick Response (QR) code is highly required to be utilized in these operations. The advantage of the QR code is easier for reading information by just scanning using any reader available on smart devices.</p> <p>The methodology is to integrate the security with QR code to save the text bank information. This is done by converting text to the QR code as an image form, then applying a cryptography algorithm to the QR code image then upload it to the cloud storage.</p> <p>Later on, once the plaintext is required to be reconstructed, the same operations are applied exactly to the encryption phase. In which the same algorithm will be applied for decryption then a QR code reader is used to preview the target bank text.</p> <p>For security matters, a key is used to be embedded in the protection operation. The type of encryption is proposed to be a symmetric One-time-pad (OTP) cryptography algorithm.</p> <p>© 2023 IEEE</p>

On The Existence Results Of A Coupled System Of Generalized Katugampola Fractional Differential Equations

Authors

- Bagwan A.S
- Pachpatte D.B.
- Jedidi A.

Abstract

This paper is mainly devoted to investigate the existence of solutions to a coupled system of fractional differential equations involving generalized Katugampola derivative with non local initial conditions.

The existence results are carried out by using some standard fixed point theorem techniques. A suitable example is also provided to illustrate the applications on our main results.

Fast Facial Expression Recognition System: Selection Of Models

Authors

- Atymtayeva L.
- Kanatov M.
- A Musleh A.M.
- Tulemissova G.

Abstract

Facial Expression Recognition (FER) is rapidly developing field of Computer Vision and Pattern Recognition directions.

FER can be helpful for various purposes: in security systems for aggression recognition, in education for students interests recognition, in marketing for customer satisfaction and in the many other fields. Usually we can distinguish seven common facial expressions for all persons.

However, it is often important to know: whether a person is positive or negative. This paper describes the recognition system for facial expression in real time, which defines relatively fast and accurate the positive or negative emotion of the faces in the camera view and selection of the architecture of Deep CNN.

This effect is a result of the combination of facial detection algorithms and classification algorithms based on the convolutional neural networks.

We have compared different datasets (FER2013 and AffectNet) and provided the experiment results in different cases of the FER models and classes, convolutional layers, and filters.

We have found that for 8 classes of FER expressions the architecture model M2 is the best model. It has the best accuracy and works about 2 times faster on GPU and 3 times faster on CPU than M1 model.

It has been also found out that training on AffectNet dataset is significantly better than training on FER2013 dataset due to the differences in number of samples in the given datasets.

- Al-Showaikh F
- Kamel El-Sayed M.

Abstract

Cloud computing is very important for many companies in the process of progress. The main problem for any company when transferring their work to the cloud is selecting the most suitable cloud provider among the availability of different cloud service providers with different properties and different alternatives.

This paper introduces a novel framework that can be used for selecting the most suitable provider in the case of missing values in the evaluation of alternatives.

The framework is composed of two steps; the first step in the framework is about using the Modified Generative Adversarial Network (M-GAN) for data imputation of missing data.

The modified version of GAN has achieved an accuracy of nearly 0.94. The second step is the Multi-Criteria Decision-Making (MCDM) neutrosophic algorithm for selecting the most suitable provider according to different eight criteria (Availability, Throughput, Successibility, Reliability, Latency, Response time, Response Time of Customer Services, and Cost).

According to the experiments done in the paper, the Novel framework has achieved success in choosing suitable providers. the presented model achieved 0.05 (sec) computation time for 1000 providers rather than 0.057 (sec), 0.061 (sec), and 0.065 (sec) in other mentioned works.

- Akgül A.
- Farman M., Aljazzar S.M.
- Al-Showaikh F.

Abstract

In this paper, we dealt with Integral Equations (IEs). Many real-world problems are modeled in the form of IEs. Nowadays, IEs are used frequently as a replacement for Differential Equations.

There are various methods to deal with IEs such as ADM, VIM, and HPM, etc. Here in this work, we used Galerkin Method.

In this method, we considered Laguerre Polynomials (some other polynomials may also be used). In the method, the Galerkin equation is solved by using Maple Code for getting unknown constants, solutions, and Graphs.

Abstract

In this manuscript new types of fuzzy mappings namely fuzzy contra gprw-continuous mappings have been introduced & investigated.

Also we found out its relation with various other fuzzy contra mappings introduced earlier. We also introduced fuzzy contra gprw-open mappings and fuzzy contra gprw-closed mappings in this paper.

- Khan A.
- Zahran S.
- Awad W.S.

Abstract

TIn this paper, We formulate a fractional-order mathematical model for the populations of diabetic patients consist three-compartment G, X, and I.

Diabetes Model is investigated with fractal-fractional operator for normal and type-1 diabetes.

Also, the deterministic mathematical model for diabetes mellitus is investigated with the effect of the fractional parameters. Solutions are derived to investigate the influence of fractional operator which shows the impact of the disease for type-1 diabetes.

The existence and uniqueness results of the fractional-order model are derived using fixed point theory.

Simulation has been made for developed solutions of fractional order diabetes model to check the actual behavior of a normal person as well as a type-1 diabetes patient.

Abstract

In this paper, we predict the behavior of solar energy in Tulkarm city, Palestine, using Markov chains and fuzzy Markov chains.

Relying on solar radiation data in Tulkarm city during 2013–2016, two models are built that correspond to each season.

A year is divided into four seasons, each of which consists of three months. Data from the period 2013–2015 are used to build the models, whereas data from 2016 is compared with the results.

The accuracy of the models was better in the summer and winter.

Impact of COVID-19 on Knowledge Management: The Double Edged Sword of Big Data

Authors

- Al Shehab N.
- Aljazzar S.M.

Abstract

With a fluctuating status of the global market post to the spread of COVID-19 pandemic, the repeated and disoriented lockdowns lead to unexpected and harmful consequences to many firms around the world.

However several businesses try hard to cope with the disaster, they ultimately arrived to a sad conclusion by putting their fundamental projects or functions on hold since they do not acquire convenient plans to be resilient among these unanticipated events.

Leaders and successful firms take the advantage of artificial intelligence and the tsunami of data to enhance their efficiency, innovation, supply chain, knowledge management, forecasting, problem solving and decision making.

The phenomenon of Big Data has opened new horizons in the field of research and currently been used to track the nature of COVID-19 virus. In addition, Big Data is employed nowadays to capture the consumers' behavior as a result of the increased online transactions in COVID times.

Furthermore, it can be useful to make wise decisions during merge and acquisition practices where knowledge and experience are massively transferred between parties.

Artificial Intelligence Application in the Fourth Industrial Revolution

Authors

- Abdulla N.J.J.
- Hamdan A.
- Kanan M.

Abstract

In this paper the Fourth Industrial revolution meaning and history is being discussed and how artificial intelligence (AI) is part of this revolution.

The fourth industrial revolution can be divided into 3 clusters digital, biological and physical clusters and each cluster it has its own applications that are connected to AI such as 3d printings, autonomous vehicle, new materials and advanced robotics implemented in this revolution AI has advanced this technology to another level where it started to affect our society in negative or positive way where our ethical value can be put in to consideration.

Also, the impact of COVID-19 is discussed accordingly for on the Fourth Industrial Revolution.

The Impact Of Artificial Intelligence On Enhancing Human Resource Management Functionality

Authors

- Al-Jawder M.
- Hamdan A.
- Roboeey A.

Abstract

Artificial Intelligence (AI) field of research started in the 1950s, for the purpose of understanding the nature in human intelligence (Jatobá et al. 2019).

Artificial Intelligence accuracy and efficiency highly overreach the traditional management ability, AI highly beats human capabilities in accuracy and in processing data and storage, as human judgments in some cases are inaccurate and part from real situation; AI judgments are accurate and will help employees in making the right decisions and ongoing advancements can be reached (Wang and Li 2019).

Human resource management (HRM) strategy is integrated with the organizations business strategy, HRM represents the organizations' high level of decision making, HRM strategy focuses on employment policies and practices which consists of recruitment, selection, evaluation, development and retention of employees, and consultation and negotiation with individuals.

Managing Small And Medium Enterprises (SMEs) During Unexpected Situations: Strategies For Overcoming Challenges

Authors

- Mahmood A
- Hamdan A.
- Tahoo L.A.
- Akeel H.

Abstract

Crises are part of life, no one has not gone through a crisis or may go through it. Recently, it has been noticed that many crises occur globally and locally rapidly and increasingly. In this research, the focus will be on small and medium enterprises (SMEs), on the way they deal with difficult situations, in addition to the strategies and processes that they follow during crisis and post crisis.

Moreover, it will shed light on the role of innovation in reducing risks associated with crises, the effects and influences that are related to the survival of the enterprises and the main causes of success during these difficult times; in turn, the main causes of failure. It will be a comprehensive analysis of crisis management and overcoming challenges during and after crises.

The occurrence of the unexpected and unplanned situations is inevitable at any time, however the challenge is how to turn this matter into an opportunity, and what is the importance of planning and full readiness for such situations, as well as predicting and finding solutions before the problem arises, as in emergency situations often thinking becomes harder and narrower.

Introducing Artificial Intelligence To Human Resources Management

Authors

- Almaghaslah Z.
- Hamdan A.
- Tunsı W.

Abstract

Artificial intelligence can be defined as a discipline of computer science whose main purpose is to provide solutions to cognitive problems related to human aptitude and beyond.

AI makes machines think like a man and thus able to perform responsibilities, for instance, solving problems, reasoning, and understanding language. Artificial intelligence is based on two major technology approaches machine education and deep learning.

Every single day, artificial intelligence and present technology are increasing. The fast-growing technology of Artificial intelligence is crucial since it helps solve problems in institutional management.

For instance, in the human resource department of any organization, artificial intelligence has been greatly employed for efficient performance.

Mainly AI aids in the automation of the HR processes through quick and accurate data analysis. Such enhancement of HR by artificial intelligence promotes successful hiring and efficient management of the company’s employees.

Moreover, a company with competent employees that adopts Artificial Intelligence is more likely to save on the production cost and enhance talent value among employees. In addition, the firm will improve the efficiency of the worker’s team strategy.

- Hakami H.

Abstract

Companies seek for improving quality in order to survive in the competitive market. To survive, you must search for the right candidates and hire them in the best-fit position at the right time.

Due to the rapid development in the world, several methods (traditional methods) are no longer efficient. People and companies are looking forward deploying more efficient methods in recruiting candidates. Currently, the trend in recruitment is moving forward applying artificial intelligence.

This paper focus on impact of Artificial intelligence (AI) on private sectors. Since this industry is introduced recently, various companies are interested in applying AI. But the dilemma is that the advantages and disadvantages of applying AI in HR is still not commonly known for all of them.

Also, the long-term effects for this industry still not revealed.

The Impact Of Artificial Intelligence On Financial Institutes Services During Crisis: A Review Of The Literature

Authors

- Abdulla E.S.
- Hamdan A.
- Akeel H.

Abstract

Artificial Intelligence (AI) is the general field that covers everything related to importing “intelligence” to computer systems in order performing tasks which require human intelligence, this is achieved by using algorithms that can detect patterns, generate insights from the data presented to them, to apply them to future decision-making processes and predictions, Artificial intelligence is a new concept of technological innovation where different technologies, processes and methods have been combined to create alternative solutions which are precise and to the point to enhance the economies as well as the competitive edge of the organization.

The implications of the AI technology have been seen in various fields of life including medical automotive as well as financial industries.

Financial institutes with crisis face challenges to deal with during to improve it quality and efficiency, so now days the financial services are under strain and challenges due to the wake up of the Covid-19 pandemic, Therefore, many financial institutes shift to implementing AI in its services to enhance it services, satisfy their customer and increase productivity.

Impact Of Fintech On The Sustainable Development Of Bahrain During COVID-19 Pandemic

Authors

- Abdulla I.
- Khaled L.
- Mohd K.
- Hamdan A.
- Akeel H.

Abstract

Fintech involves advanced technology-based solutions for the customers while not being dependent on the banking system and rather focuses on the other virtual currency options.

The emergence of these methods especially cryptocurrencies and blockchains after the financial crisis of 2008–9 is more important for the sustainability and development of a country since Fintech is also an advancement in mediums of money flow.

The present research has explored the effect of Fintech on sustainable development (economic, society, and environment) while focusing on the existing literature.

The previous literature and theories represent that there is a significant influence of Fintech on sustainable development however, the influence differs in different countries and situations.

Based on this, the study has identified that there has been no research on the role of the Covid 19 pandemic among Fintech and sustainable development of Bahrain and suggested quantitative research for the future.

The Impact Of Artificial Intelligence On The Human Resource Industry And The Process Of Recruitment And Selection

Authors

- Aamer A.K.A.
- Hamdan A.
- Abusaq Z.

Abstract

In the contemporary world, artificial intelligence (AI) is an industry that continues to transform human lives and has a profound impact on business in almost all spheres. Organizations are searching for bright, dynamic, and potential employees to remain competitive in this digital age.

Managing the digital world and developing the business environment will require organizations to employ a suitable individual with an effective recruitment strategy. Hence, hiring skilled employees who are experienced and efficient in achieving the job objectives is a crucial part of any organization’s recruitment strategy.

Artificial Intelligence has a key role to play in recruiting, its ultimate goal is to allow computers to carry out the same work as normally performed by humans. Artificial intelligence functions and reacts as if it were a human leading with incredible speed and accuracy.

This study aims at analyzing how Artificial Intelligence (AI) impacts the Human Resource Industry. The study sheds light on the way artificial intelligence is used during the recruiting and selection process.

Artificial Intelligence (AI) In The Education Of Accounting And Auditing Profession

Authors

- Ali S.M.
- Hasan Z.J.
- Hamdan A.
- Al-Mekhlafi M.

Abstract

The study aimed to explore the impact of artificial intelligence on the performance of counting and checking operations. This work provides a review of the literature on artificial intelligence and its use in the accounting and auditing professions.

A narrative approach was used to analyze related articles and micro-research to provide a comprehensive overview of the topic. Particularly with regard to the accounting and auditing professions, artificial intelligence has lately undergone earlier breakthroughs that have caused a shift in their attention from paper to computer entries.

The goal of artificial intelligence is to demonstrate how computer technology can execute activities as effectively and efficiently as humans, if not better. The future of the accounting and auditing professions depends critically on artificial intelligence technology since it gives us the means to perform our duties more effectively and efficiently.

AI has significantly improved operations, reporting, and decision-making processes in accounting and auditing, among other fields.

Artificial Intelligence And Human Resource Management In Public Sector Of Bahrain

Authors

- Alfulaiti M.J.K.
- Hamdan A.
- Baashira R.

Abstract

The study's major goal will be understanding the importance of artificial intelligence (AI) in the human resources management, particularly in Bahrain. Also, to look into the issues that have arisen as a result of training programs launched in Bahrain's public sector.

The training and development of employees are two of the most important topics tackled. The importance of training in delivering the required knowledge and capabilities should not be overlooked. As a result, the training must be successful enough to meet these goals.

This study examines a number of contextual elements that have been discovered to have an impact on vocational training in different combinations with other previously examined effective factors.

It will enquire into their relationship. It also identifies the various types of relationships that exist between the efficiency of training and environmental elements. The Kirkpatrick training model is used to build the study's framework.

This paradigm has four stages that measure the success of training: reaction, learning, behavior, and result. This modest study project offers a glimpse into the future of employing AI to better understand HR practitioners' attitudes and perspectives across a variety of systems.

According to the study, Bahrain's public sector has been a tremendous potential in order to keep pace with the digital revolution by implementing its vision (2030 vision).

As a result, the staff mix of commercial organizations has changed. It gives men and women the opportunity to compete in a variety of occupations. As a result of the requirement for gender equality, human resource management will be burdened in new ways.

This also allows for a nice feminist component to be included. It is suggested that current artificial intelligence be used as a foundational method for firms that operate in a volatile environment.

Using Artificial Intelligence (AI) in the Management Process

Authors

- Hassan A.
- Elrahman M.G.S.A.
- Ali S.A.
- Abdulkhaleq N.M.S.
- Dahlan M.
- Shaker G.

Abstract

This study examines the use of artificial intelligence (AI) in administrative processes. The results reveal that the adoption of AI mechanisms within organizations is worth investing in, as the use of information technology benefits the management of administrative functions and relationships.

Using AI enhances decision-making at all levels within an organization, and the results demonstrate that expert systems are the embodiment of AI that can serve the quality and effectiveness of administrative management.

This study recommends the adoption of expert systems and AI models in various business organizations and public bodies to improve the decision-making process.

Artificial Intelligence For Decision Making In The Era Of Big Data

<div>Authors</div> <div><ul style="list-style-type: none">Alqadhi B.Hamdan A.Nasseif H.</div>

Abstract

This paper aims to study the impact of Artificial intelligence (AI) on decision making in the era of Big Data, and what are the main limits or challenges to this topic, and to provide a better understanding on AI in decision making.

AI history consist of attracting different level of interest through spring and winter seasons ever since the 1950's. Nowadays, number of research papers and articles discussing ways into which AI tools are incorporated in decision making is increasingly rising, all sectors and fields are involved including healthcare, gaming, weather forecasting, defense and security, construction planning and business to name a few.

Evidence highlighted by research papers show how decision-making tools through AI and Big data contributed to the prosperity of humans and the planet and attempts to solve numerous issues accompanied with each field in decision making, AI infused decision making versus human decision makers has shown several impacts on time saving, cost cuttings, creating enhanced products, and contributing to sustainability.

The Impact Of Bahrain's Adaptive Sports On Quality Of Life

<div>Authors</div> <div><ul style="list-style-type: none">Ahmed N.S.J.I.Moosa A.Hamdan A.Zahran S.</div>

Abstract

The importance of research and review of the advantages of physical exercise for humans and the importance of sports and the extent of its impact on the lives of individuals in various aspects.

Bahrain Economic Vision 2030 consider sport is one of the most important factors to increase immunity in the human body, and that sport is important to confront COVID-19 and all diseases, so there are positives to the need to adhere to sports practices.

Literature Review shows Public sector support for sport and physical activity unleash promote wellbeing and health, pursue positive social goals and promoting genders equality (Giulianotti et al. 2019) and how Physical activities enhance quality of life as exercise are very great for the general health and physical and psychological health of those who exercise regularly. (Shen et al. 2020).

The method of the research is systematically literature review the articles related how sport enhancing quality of life, global initiatives regarding sport as social innovation and Bahrain overview about physical activity.

In the Conclusion, Sport is one of the main things in a healthy person's life, which maintains public health and prevents diseases.

Also, Bahrain 2030 vision improve health system by promoting and encouraging a healthy lifestyle by offering more attractive public spaces and modern facilities to boost sports activities.

A User-Priorities-Based Strategy For Three-Phase Intelligent Recommendation And Negotiating Agents For Cloud Services

Authors <ul style="list-style-type: none">Kumar R.Hassan M.F.Adnan M.H.M.Shukla S.Safdar S.Qureshi M.A.Abdel-Aty A.-H.	Abstract <p>As the field of information technology expands, there is a huge need for cloud service providers (CSP). CSP's vast solutions and services support Cloud, IoT, Fog, and Edge computing.</p> <p>In today's competitive cloud market, customer satisfaction is critical more than ever. CSP and consumer satisfaction with service level agreement (SLA) fulfillment have always been given more attention.</p> <p>As a result of signing SLA and CSP agreements to supply resources in high demand, customers are now experiencing issues with resource delivery.</p> <p>Cloud and heterogeneous environments necessitate an intelligent recommender and negotiation agent model (IRNAM) to handle responsibilities in the current system.</p> <p>The Recommender system recommends CSP as per users' priorities, which eases the filtration process.</p> <p>The negotiation process provided by IRNAM ensures that users' choices are prioritized with maximum jobs to CSP.</p> <p>IRNAM keeps track of the most critical metrics and can reach decisions quickly and for the best possible deal.</p> <p>It uses an analytical concession algorithm that analyzes consumer and CSP choices to find a reliable, secure server with the simplest solution.</p>

New Prospective On Information Entropy Using Different Initial States Of The Atom-Field Interaction

Authors <ul style="list-style-type: none">Barakat E.El-Kalla I.L.Abdel-Aty M.	Abstract <p>We propose a new approach for introducing the long-life information entropy of the interaction between atom and electromagnetic field.</p> <p>Our approach is based on a comparison of the initial state of the field. The field is initialized in Pólya state, negative hypergeometric state, generalized nonclassical state, phase-like state and generalized hypergeometric state.</p> <p>Dynamics of entropy squeezing are examined. It is shown that a long-time approximately steady nonclassical behavior of the system can be obtained using specific values of the parameters associated with the initial state of system.</p> <p>An application of the developed method to obtain the long-lived information from different models is given.</p> <p>© 2023 World Scientific Publishing Company</p>

Fintech Up-Coming In Saudi Arabia: Study, Analysis, And Recommendations

Authors <ul style="list-style-type: none">Frad H.Jedidi A.	Abstract <p>Fintech is the new IT solution for the financial sector which it uses artificial intelligence, machine learning, security, etc.</p> <p>Moreover, different governments encourage the implementation of Fintech to improve their economics in the future. However, the crisis of the oil sector busts the GCC governments to change the types of their economic sectors to be more varied.</p> <p>Fintech is one of the major players in new GCC economics. Therefore, Fintech is one of the promote solutions that lines with the vision 2030 in Saudi Arabia.</p> <p>In this fact, this paper proposes a study of the Fintech implementation in Saudi Arabia, in which it analyses the different metrics involve in the process of implementation. Precisely, it focuses on three levels of implementation: Fintech initiative, Fintech regulation and Fintech in society.</p> <p>Finally, the paper presents a strategy recommendation to improve the implementation of Fintech in Saudi Arabia. Dual-Tier Cluster-Based Routing In Mobile Wireless Sensor Network For IOT Application

Authors <ul style="list-style-type: none">Al-Sadoon M.E.Jedidi A.Al-Raweshidy H.	Abstract <p>Mobile wireless sensor network (MWSN) technology is a fundamental element of the Internet of Things (IoT) in which hundreds to thousands of sensor nodes (SNs) are connected via wireless channels capable of providing a digital interface to real-life objects.</p> <p>Energy consumption, connectivity, scalability, and security are the main challenges in MWSN, and mobility increases the effort required to find an efficient routing protocol to improve the MWSN performance.</p> <p>In this paper, we propose a novel routing protocol based on the dual-tier clustering concept and virtual network zones to improve MWSN performance.</p> <p>The proposed protocol named 'Dual Tier Cluster-Based Routing' (DTC-BR) divides the network area into virtual zones which a cluster-head mechanism selects the most appropriate SN to act as Cluster Head (CH).</p> <p>Furthermore, virtual zones are designed to cover the entire network area based on a dual-tier routing mechanism: the main connectivity zone (MCZ) and candidate cluster zone (CCZ).</p> <p>The DTC-BR protocol was deployed and assessed using MATLAB, assuming three levels: energy consumption, network lifetime, and scalability. The comparative results demonstrate the efficiency of DTC-BR, where the network lifetime increased by 6%, 21%, 25%, and 37% compared to state-of-the-art dynamic directional routing (DDR), mobility-aware centralized clustering algorithm (MCCA), low-energy adaptive clustering hierarchy-mobile energy.</p>

Emerging Technologies For Digitalized Learning In Higher Education

Authors <ul style="list-style-type: none">Janahi Y.M.AIDhaen E.Hamdan A.Nureldeen W.A.	Abstract <p>Purpose: Academic institutions, for the most part, discontinued face-to-face classes in favor of adopting and deploying online learning modalities that allowed for immediate participation. The pandemic has hastened the pace of implementation as well as the utilization of and reliance on technology. Artificial intelligence (AI) is important for higher education business continuity. Currently, some institutions are utilizing these resources to strengthen their student recruitment and retention efforts. Others use them to make the classroom more accessible or to construct tailored learning programs.</p> <p>Design/methodology/approach: The rapid spread of the deadly COVID-19 pandemic in early 2020 has compelled many countries to enact stringent measures to halt the virus's spread. The pandemic has hastened the adoption of online teaching and remote work technology. While a combination of online and face-to-face learning is the way of the future, it will necessitate additional resources to support program development and delivery, as well as increased collaboration between IT and subject matter experts.</p> <p>Findings: This successful technological integration, which includes a smooth transition from face-to-face training to digital e-courses, provides a variety of benefits, including money saved on travel expenses. Top technological developments will continue to enhance company innovation and efficiency while also improving service efficiency. The top strategic technology trends for this year fall into three categories: human centricity, location independence, and resilient delivery, and are expected to be significant for the next five to ten years. Higher Education Institutions (HEIs) will need to establish a technological ecosystem that is dependable, cloud-based, data-integrated, and learning-focused to compete successfully in this "new normal." After the epidemic, when classes resume on campus, a hybrid approach to virtual learning is likely to become the new normal. While it is unlikely that campuses would be totally virtual, they will also be unlikely to be entirely physical.</p> <p>Originality/value: A blend of actual and virtual classrooms, as well as online learning, is the long-term solution, and strategic decisions made now will be critical in preparing for a post-pandemic world. © 2023, Emerald Publishing Limited.</p>

An Exploration Into People’s Perception About The Future Of Cryptocurrencies And Its Impact On The Financial World: Evidence From An Emerging Market

Authors

- Ghuloom H.
- Sanad Z.

Abstract

Cryptocurrencies are now a popular subject of discussion. Companies and investors worldwide have already started to accept the usage of cryptocurrencies; however, others are still rejecting it.

Until now, it is not easy to ascertain the opinion of the mass population specially in the emerging markets.

Accordingly, the purpose of this study is to learn how cryptocurrencies are perceived by the mass population to better understand the possible success and usage in the emerging market.

In particular, this study digs more to discover on a personal level how people perceive the new technology, cryptocurrencies, which had yet to be understood as this market is still at an early stage specially in the emerging markets region.

Another important takeaway from this research is that it examined and expounded on people’s future trends concerning the adoption of Cryptocurrencies.

For the analysis, the research adopts a quantitative research methodology using a questionnaire.

A 5-points Likert-scale questionnaire has been designed including questions for each variable. The data was collected from 300 respondents.

Diffusing It Competence With Business Analytics Enables Data-Driven Culture For Achieving Evidence-Based Managerial Decisions For Assuring Sustained Competitive Advantage: A Literature Survey

Authors

- Razzaque A.
- Karolak M.
- Lorne F.
- Amba S.

Abstract

Globalized economies have organizations seeking ways to implement Business Analytics (BA) though ample organizations fail in such initiatives.

Hence, scholars embark on IT competence enabled BA to inspire a data-driven culture. Such is a crucial prerequisite for fostering long term organizational sustainable competitiveness.

Even though the above rationale receives widespread attention, there is scant evidence comprehending whether IT competence enabled BA to empower an organizational data-driven culture to achieve long-term sustained competitive advantage.

Current literature reviews are conducted predominantly through journals and academic conference papers.

The literature review reveals a conceptual model composed of three propositions viable for future research’s empirical confirmation.

This study defuses IT competence, business analytics, data-driven culture, and organizational competition in one model, proving through critiqued literature that business analytics.

- Almarashdah F.
- Al-Okaily A.

Abstract

This study aims at the role that the project management strategy plays in improving the performance of firms and through the companies’ adoption of the concept of strategic planning, which in turn helps in knowing the company’s plans in the short and long term.

In order to improve the company's performance and the continuity of the company's survival in the market.

The purpose of this article is to study the relationship between project management strategy and the performance of SMEs in Jordan and the mediating role of strategic planning.

The researcher used the descriptive and analytical approach to analyze and classify the data, and 291 valid questionnaires were used, and the descriptive analytical approach was used to analyze the data.

The “probability sampling method” was applied to collect the data. The main results are that the project management strategy affects the performance of companies and strategic planning.

Strategic planning as a mediator influences the performance of firms through this study.

Abstract

The study aimed to identify the usage of digital media in society and applied this usage in educational field.

The results indicated that new types of media as (digital media) or (social networks) and (citizen journalism) etc. Results showed that modern communication technology has contributed to enhancing cultural communication, revitalizing knowledge exchange between peoples, overcoming geographical in educational field and even transcending them, and brought about a radical change in quantity and quality in the content transmitted through digital media.

The Use Of Modern Technology In The Practice Of Digital Public Relations

Authors

- Hassan A.

Abstract

This study aims to know the modern techniques available to departments, the practice of public relations activities, and their reflection on the performance of public relations practitioners in addition to monitoring, and the level of their use and areas of employment in the field of public relations.

The results indicated that technological development during the last decade has led to shifts in the field of public relations practice, which has faced great challenges since the emergence of applications and tools for interactive means of communication and the expansion of their use, foremost of which are websites that enable their users to exchange information.

A Broader Perspective On Extensible Business Reporting Language (Xbrl) In Earnings Management Research

Authors

- Sanad Z.
- Al-Sartawi A.

Abstract

The literature on earnings management is vast. Surprisingly, far too little attention has been paid to investigating the impact of adopting eXtensible Business Reporting Language (XBRL) on earnings management practices.

The current study reviews and discusses the previous studies that investigated the impact of adopting XBRL disclosure on earnings management practices.

The study also highlights the gap in the literature and revealed that most of the studies agreed so far that XBRL could lead to a reduction in accrual-based earnings management, however, the real activities are more likely to be increased instead.

The current findings ring a bell regarding the need to dig more in depth regarding the factors that could lead to managing real earnings management as well as the other types of earnings management (i.e., classification shifting) as these methods could lead to severe unpreferable consequences in the long run.

This research will serve as a base for further studies as it suggests several future research topics. The results of this study can inform regulators, investors, and corporate management on how XBRL adoption is associated with corporate financial reporting.

Abstract

The study aims to identify the future of e-learning in the post-Corona crisis, and study the most prominent future directions for the future of education during and after the Corona pandemic, which will chart the future of education and determine its identity, as the success of our educational systems in the future depends heavily on reading the future carefully and anticipating its features, The study reached many results, the most important of which are: The awakening of many educational systems in the world towards e-learning began after this pandemic, and even increased its conviction in it and took the direction towards it with full force during the crisis, and it is expected that interest in it and the expansion of its use even after the crisis, and in the near and far future, the results revealed that the outbreak of the Corona virus accelerated the movement of many education systems in the world to take many quick steps towards using and employing e-learning and spending on it, which will lead to its simplification and speed of use and the removal of many challenges and obstacles that stand in front of it.

Abstract

The study aims to identify the uses of artificial intelligence in exams with the aim of conducting exams in an effective manner and preventing cheating in these exams by using artificial intelligence applications.

Errors that may occur and correction of the test electronically, and the results also showed that this technology is a faculty member of the university to carry out the process of monitoring and monitoring the performance of students during the performance of their tests with high accuracy, using modern digital means and artificial intelligence that can distinguish between natural and suspicious movements, so that every movement is monitored The student performs it during the test and analyzes and categorizes it.

The Usage Of Technology In Mass Communication And Its Applications

Authors

- Hassan A.
- Ali S.A.
- Abdulkhaleq N.M.S.

Abstract

The study aims to identify the role of modern technology in influencing the media fields by applying to the press, radio and television sectors.

Which strengthens the broadcast, which made it possible to transfer information from the most remote places, as it was relied on satellites to transmit information, and it became possible to transmit and receive information from within the event, due to the development of means of communication and the presence of the Internet, which was able to link the regions of the world together.

Direct interaction options were also introduced by viewers and listeners, and the results revealed that the entry of newspapers into the era of electronic publishing made it imperative to find advanced, fast and unconventional means to store information that is received by the newspaper on an ongoing basis, and leaving this huge amount of information undocumented or stored represents a waste A real wealth of information for press publications and publishing houses that are now working in the most important global trade, which is the information trade.

Knowledge Management Capabilities Excel The Long-Term Corporate Sustainable Development: A Literature Review

Authors

- Razzaque A.
- Razzaque N.
- Ali M.
- Al-Arayed H.M.

Abstract

The knowledge era has become critical for enabling organizational value. Though knowledge is critical for organizational efficiency, leveraging the intangible form of knowledge is a challenging endeavor.

Even though there exist ample studies assessing the role of social networks or virtual communities like knowledge management tools on operational efficiency, there is no clear empirical evidence how the knowledge management processes of a knowledge management system enable an organization in various contexts.

The issue is that though such knowledge management tools inspire operational efficiency through the facilitation of quality decision-making, how actually the knowledge management capabilities (i.e., through the application of knowledge management processes: knowledge acquisition, knowledge creation, knowledge sharing, and knowledge storage, knowledge retrieval, and knowledge application) improve organization operation efficiency is yet empirically unknown.

There is a need for literature review to shed light on how knowledge management capabilities support the organizational managerial strategies. he knowledge era becomes critical for enabling organizational value.

The Need For Environmental Governance: A Literature Review Paper

Authors

- Qarooni N.
- Al-Sartawi A.

Abstract

This paper was accomplished to show the need for and importance of Environmental Governance in the current period.

Additionally, it showed the main aim behind having environmental governance inside organizations and within each country. Also, addressed the impact of the environmental governance on governments, sustainability, and performance of different companies.

Based on the literature conducted, it was proven that having a good environmental governance will improve economic growth for countries, enhance the financial performance of companies and will boost the sustainability programs to reach to higher levels of environmental protection and natural resource protection.

Artificial Intelligence And Its Impact On Accounting Systems

Authors

- Khaled AlKoheji A.
- Al-Sartawi A.

Abstract

Artificial intelligence is called as forth industrial revolution. The concept of artificial intelligence is to help humans in doing tasks and taking decisions by using machines.

Nowadays technologies and artificial intelligence impacting our lives in many fields, and it keeps developing and changing in a rapid pace.

People and companies are trying to cope with this advanced technology and apply it in ease their live in many areas.

This literature review is important for business and organizations. It is essential for organization's business owner's and top managements to under- stand the power of artificial intelligence on business, how artificial intelligence improve their businesses sales, reduce costs, and enhance performance in many tasks in the firms the challenges that can face companies who is investing in artificial intelligence.

Moreover, this literature review can be important to accountants also to understand the future of the profession and how AI can affect their career. Also, how to develop their skills.

This literature review explained what artificial intelligence is and how it started. Examples of artificial intelligence applications in different fields like health, education, and business and the application in accounting in specific the big 4 accounting firms in the world.

Augmented Press And Robot Journalists Who Determines The Ethics Of Journalistic Coverage?!

Authors

- Mseer I.N.

Abstract

The focus is on researching the relationship between the journalist and the technician and considering that the current reality has come to refer with complete clarity to the aspiration of journalistic work to rely on algorithms, data processing, and linguistic engineering applications.

This shows the importance of examining the symbolic message on which the press is based instead of the cold and direct logic on which digital applications are based. The matter remains dependent on the initiative issued by the press sector, given the responsibility related to the importance of reconsidering the media content industry.

And directing attention to the extent of (the world's vision) for the journalist. The mission and moral responsibility are involved in the entire journalistic work; the journalist's job is not limited to writing texts or following up and editing the news. Still, the matter goes far beyond this reality.

Artificial intelligence and its algorithms may help journalists produce 100 articles in five minutes. But the question remains about the feasibility, meaning, value, and importance of this amount of production.

Let us agree that the articles produced based on the existing cooperation between (digital and human) have reached accuracy and skill and rely on a vast amount of data and information.

- Momany M.T.
- Al-Okaily M.

Abstract

Accounting information system has become an essential tool in any firm. In this study, the researchers investigated whether accounting information system has an impact on Islamic banks' organizational performance in Bahrain.

The study focuses on testing three main elements of the accounting information system including human and physical resources and financial data.

A questionnaire was designed to collect the study data. The population of the present research includes all the accountants, financial managers, and board members of the Islamic banks in Bahrain.

The results revealed that there is a significant impact of human resources on Islamic banks organizational performance in Bahrain.

The results of the research are significant for the banking sector, regulators, and other stakeholders in Bahrain as they reflect the extent to which the accounting information systems in the Islamic banks are effective.

Transformation Of Managerial Accounting Trends In The Era Of Digitalization

<div>Authors</div> <div><div><ul style="list-style-type: none">Mansoor M.A.Salmanand E.M.Al-Sartawi A.</div></div>
--

Abstract

Digitalization can be termed as the use of different digital technologies within the business model which allow a business to have different types of value producing opportunities within the firm.

Further, with the help of digitalization, the domain of management accounting has seen significant amount of change with which it has been able to improve to significant extent.

Further, it is evident that the business models within an organization can be also affected by the digitalization and with the help of digitalization, management accounting within a business environment can be improved significantly. The finance function as well as the management accounting function can be greatly improved with the help of robotization and automation.

Management accounting process can be denoted as the branch of accounting that delivers information as well as assists in understanding business transactions.

With the help of management accounting function, the internal as well as external users of the company can understand the current business situation as well as improve decision making within the organization.

It is essential for managers to execute different financial activities related to organization. Without help of management accounting, it is not possible for a business to improve significantly.

The Impact Of Accounting Information System On The Organizations Financial Performance

Authors

- AlBastaki T.Y.
- Hamdan A.

Abstract

In the face of fast technological progress, increasing knowledge, and difficult demands from businesses and customers, an accounting information system is an essential instrument in the hands of managers seeking to sustainable competitive advantage.

The impact of accounting information systems on organizations financial performance is investigated in this study.

The primary goal of this paper is to review the theoretical and conceptual basis as well as research findings on accounting information systems and company financial performance.

According to the findings of the review, previous studies on the impact of accounting information on financial performance focused on the cost implications of accounting information systems as they relate to corporate financial performance.

The vast majority of studies used a survey study methodology to investigate this link, and the rest of the researches were conducted in industrialized economies where accounting information systems technologies have been extensively adopted.

As a result, this study suggests that further research should done in this area to close this research gap.

The Impact Of Digital Banking On The Bank Operation And Financial Performance

Authors

- Isa A.A.
- Hamdan A.
- Alareeni B.

Abstract

In this chapter, the researcher explored the available literature about the two variables of the study which are digital banking as the independent variable and bank performance as the dependent variable.

Previous research indicates that though digital banking is a new trend in the world of banking, it has been a significant issue and due attention is given to it since it significantly contributes to enhancing the image of the banks as well as satisfying the changing requirements of the consumers.

Though bank performance can be measured by different indicators, prior research ensure that operational performance and financial performance are the most outstanding.

The relationship between applying digital banking and improving bank performance has been proved in many of the studies that were reviewed while a few proved there was no relationship.

E-Learning And Understanding Of Accounting During COVID-19 Pandemic: Literature Review

Authors
<ul style="list-style-type: none">Isa A.A.AlYaqoot F.J.Ahmed T.S.AlArabi Y.T.Hamdan A.Alareeni B.

Abstract

E-Learning has been introduced in the economy after the revolution of technologies that increased in many sectors and that has become a necessity in the current period of life specially during the COVID-19 pandemic.

E-learning is illustrated in using the electronic communication to deliver education between educators and learners which helped institutions and universities to implement innovative features and techniques in order to enhance interactions between students and educators and make it more flexible in time and place for both.

In this research paper, we have examined and investigated the implementation of E-learning during the COVID-19 pandemic and how that has affected the E-learning process, explaining the significance of E-learning and specially in understanding accounting.

Furthermore, this research study obtained to one more objective that is identifying some of the major challenges while understanding accounting through E-learning particularly during COVID-19 crisis.

This study's design was to adopt the examination of the implementation of E-learning during COVID-19 on the dependent variable which is understanding and studying accounting.

The Use of Facebook and Technology in E-Learning Process

Authors

- Hassan A.

Abstract

This study aimed to reveal the reality of using social networks for educational purposes.

The results of the study revealed that the increasing use of social networks and their entry into various fields, including education, led to a change in educational philosophy; So, what is known as education through social networks officially appeared, and many faculty members in international and Arab universities and schools began using education through social networks as a method to create an interactive learning environment in which the student is an active element participating in educational responsibility, and the results revealed that Facebook is one of the alternative means for shy students to be able to express their ideas inside and outside the classroom and allows students to collect and express their ideas in writing before committing in their own words.

- Alshurafat H.
- Ananzeh H.
- Mansour E.
- Hamdan A.

Abstract

During the COVID-19 pandemic period, external auditors have used technological solutions to complete their job tasks due to the lockdown ramifications. Therefore, many external auditors have opted to work remotely.

Nevertheless, the abrupt adoption of remote auditing received mixed feedback from those auditors due to different determining factors.

Therefore, this article intends to examine these factors in the Jordanian external auditor context. To do so, a model combining the critical factors from the diffusion of innovation model and technology acceptance model has been utilized.

The model was tested using data collected from 109 external auditors from public accounting firms working in Jordan.

The results expand our understanding of remote auditing adoption decisions, providing empirical support that perceived usefulness, perceived ease of use, and trialability are the important determinants to adopt remote auditing systems. Based on these results, further discussion, implications, and recommendations have been provided.

Women On Boards Of Directors: The Moderation Role Of Female Labour Force Participation

Authors

- Hamdan R.
- Hamdan A.
- Alareeni B.
- Atayah O.F.
- Alhalwachi L.F.

Abstract

Purpose: This study aims to investigate the moderation role of the percentage of women in the country labour force in the relationship between firm-level governance factors (board size, institutional ownership, ownership concentration, board independence, performance, firm size, firm's risk and sector) and women on boards (WOBs) in publicly listed firms in Gulf Cooperation Council (GCC) countries.

Design/methodology/approach: The study relied on a sample of 436 publicly listed firms in 2018 in six GCC countries (Bahrain, Kuwait, Saudi Arabia, Oman, Qatar and the United Arab Emirates).

Findings: The study concluded that the percentage of women in the country's labour force has a moderation role in the relationship between board size and WOB, as well as firm market performance and WOBs. However, ownership concentration, firm size, firm risk and firm sector do not affect the percentage of WOB; consequently, the percentage of women in the country's labour force did not have a moderation role in the relationship between these variables and the percentage of WOBs.

Board Gender Diversity And Environmental Disclosure: Evidence From The Banking Sector

Authors

- Buallay A.
- Alhalwachi L.

Abstract

Purpose: This study aims to examine the relationship between board gender diversity and environmental disclosure (ED) in the banking sector.

Design/methodology/approach: Data pooled from Bloomberg database on 2,116 banks from the period of 2007 to 2016 ends up with 7,951 observations. Panel regression model that include random effects was used to test study hypothesis.

Findings: The findings showed that when female board members were between 21% and 50%, it had a significant positive effect on the ED disclosure. Furthermore, the results showed that bank located in non-OPEC countries have better gender diversity in their board and greater ED than non-OPEC countries. Moreover, the results demonstrated that the board diversity and ED are better in banks that are located in countries that ranked 26-50 in oil production.

Originality/value: Although findings of this research clearly discussed the importance of board diversity in enhancing ED, the results of this study give us a crucial signal as a wake-up call for regulators to start considering women quota on board for higher ED.

Risk Management And Corporate Governance Of Islamic Banks: Evidence From GCC Countries

Authors <ul style="list-style-type: none">Reyad S.Chinnasamy G.Madbouly A.	Abstract <p>Purpose: The purpose of this study is to identify the effectiveness of risk management and corporate governance (CG) practices followed in Islamic banks (IBs) of Gulf Cooperation Council (GCC) countries. Hence, they are considered as critical performance indicators for financial institutions and IBs. Though the IBs are growing, there are still challenges associated with their operations because of Shariah noncompliance risks, governance, capital adequacy ratio and other risks.</p> <p>Design/methodology/approach: This study uses a mixed-method approach, gathering qualitative data from senior risk managers of chosen IBs via semi-structured interviews and quantitative data from selected IBs financial reports using capital IQ resources. The information was gathered for a considerable time (2013–2019), and the CAMELS rating system was used to analyze it.</p> <p>Findings: The results showed that GCC IBs manage their business risks well through effective CG except in certain areas like asset quality management and liquidity.</p> <p>Practical implications: The result of this study can provide support to the banks’ top management, chief executives, regulators and government, in all practices related to risk assessment, management and mitigation.</p>

Adaptive QoS-Aware Multi-Metrics Gateway Selection Scheme For Heterogenous Vehicular Network

Authors

- Alawi M.
- Alsaqour R.
- Abdelhaq M.
- Alkanhel R.
- Sharef B.
- Sundararajan E.
- Ismail M.

Abstract

A heterogeneous vehicular network (HetVNET) is a promising network architecture that combines multiple network technologies such as IEEE 802.11p, dedicated short-range communication (DSRC), and third/fourth generation cellular networks (3G/4G).

In this network area, vehicle users can use wireless fidelity access points (Wi-Fi APs) to offload 4G long-term evolution (4G-LTE) networks.

However, when using Wi-Fi APs, the vehicles must organize themselves and select an appropriate mobile gateway (MGW) to communicate to the cellular infrastructure.

Researchers are facing the problem of selecting the best MGW vehicle to aggregate vehicle traffic and reduce LTE load in HetVNETs when the Wi-Fi APs are unavailable for offloading.

The selection process utilizes extra network overhead and complexity due to the frequent formation of clusters in this highly dynamic environment.

In this study, we proposed a non-cluster adaptive QoS-aware gateway selection (AQAGS) scheme that autonomously picks a limited number of vehicles to act as LTE gateways based on the LTE network’s load status and vehicular ad hoc network (VANET) application’s QoS requirements.

Micro-Level CSR As A New Organizational Value For Social Sustainability Formation: A Study Of Healthcare Sector In Gcc Region

Authors

- AIDhaen E.

Abstract

Purpose: The purpose of the research work is to investigate whether micro-level corporate social responsibility (MCSR) plays a positive role in forming and promoting organizational social sustainability (SOS). It further investigates how each of the four dimensions of MCSR are linked with organizational social sustainability. Additionally, the study aims at studying MSCR and SOS within a context where such kinds of studies are scant.

Methodology: A quantitative, cross sectional, and explanatory design was used to conduct the study. A sample 516 respondents were drawn from five hospitals in Bahrain through random sampling technique, and 441 questionnaires complete from all aspects were included for analysis. Different reliability and validity tests were carried out to check the goodness of the data. Inferential statistics, including regression analysis, were applied to test the hypotheses.

Findings: Data analysis showed a significant relationship between micro-level CSR and organizational social sustainability. Ethical dimensions of MCSR proved to be the most dominant influencer of SOS, followed by environmental dimension of MCSR. However, the relationships of philanthropic and economic MCSR with SOS were statistically significant, but the intensity of relationships was weak.

Originality: It is the seminal work in terms of investigating the relationship between MSCR and SOS which, to the best of the researcher’s knowledge, has not been investigated before.

Security And Privacy Recommendation Of Mobile App For Arabic Speaking

Authors

- Almubarak H.H.
- Khouja M.K.
- Jedidi A.

Abstract

There is an enormous number of mobile apps, leading users to be concerned about the security and privacy of their data. But few users are aware of what is meant by app permissions, which sometimes do not illustrate what kind of data is gathered.

Therefore, users are still concerned about security risks and privacy, with little knowledge and experience of what security and privacy awareness. Users depend on ratings, which may be fake, or keep track of their sense to install an app, and an enormous number of users do not like to read reviews.

To solve this issue, we propose a recommender system that reads users' reviews, and which exposes flaws, violations and third-party policies or the quality of a user's experience. In order to design and implement our recommender, we conduct a survey which supports two significant points: to detect the level of security and privacy awareness between users, and to gather new words into a dictionary of a recommender system, which assists to classify each review on the correct level, which can indeed reveal the scale of security and privacy in an app.

Sustainability Disclosure And Its Impact On Telecommunication And Information Technology Sectors' Performance: Worldwide Evidence

Authors

- Buallay A.
- Al Marri M.

Abstract

Purpose: This study investigates the relationship between the level of sustainability disclosure and telecommunication and information technology (IT) sectors' performance (operational, financial and market).

Design/methodology/approach: Using data culled from 4,458 observations from 60 different countries for 10 years (2008–2017), an independent variable derived from environmental, social and governance (ESG) score are regressed against dependent manufacture performance indicator variables [return on assets (ROA), return on equity (ROE) and Tobin's Q (TQ)]. Two types of control variables complete the regression analysis in this study: firm-specific and macroeconomic.

Findings: The findings elicited from the empirical results demonstrate that there is a significant negative relationship between ESG and market performance (TQ). However, there is no significant effect of ESG on both operational (ROA) and financial performance (ROE). Moreover, the findings elicited from the partial least square structural equation modeling the relationship between ESG and ROA is stronger in emerging than in developed economies.

Practical implications: The authors' opinion for policy makers is that it is essential to promote and implement the appropriate legislative framework for sustainability reporting, which should enhance both the sustainability practices as well the profitability of IT firms.

Originality/value: The model in this study presents a valuable analytical framework for exploring sustainability disclosure as a driver of performance in telecommunication and IT sectors' economies. In addition, this study highlights telecommunication and IT sectors' management lacunae manifesting in terms of the weak nexus between each component of ESG and IT sectors' performance.

International Perspectives On Sustainability Reporting

Authors

- Buallay A.M.

Abstract

As global concerns around the environment, climate, and sustainability are moving to the forefront of consumer choices and business values, how organizations report on sustainability has become more crucial than ever before.

Business sustainability issues are a major concern, with many firms seeking to contribute positively when serving their local communities and enhancing their corporate responsibility practices socially and environmentally.

International Perspectives on Sustainability Reporting presents business case studies from different sectors across different regions, highlighting the changing institutional contexts and laws in each country regarding sustainability reporting: for some, reporting is mandatory and for others it is voluntary.

Taking not only the historical but also the firm level, sectoral, regional, political, and economic perspective, Buallay's work is far-reaching and comprehensive, spanning from the history of environmental reporting to sustainable reporting in the tourism industry.

Tackling multidisciplinary topics that include finance, economics, sociology, law, governance, and organizational management, the methods deployed here are both qualitative and quantitative. International Perspectives on Sustainability Reporting is essential reading for both scholars and practitioners in all of these sectors as sustainability increases in importance across the board.

Awareness Of Occupational Health Hazards And Occupational Stress Among Dental Care Professionals: Evidence From The GCC Region

Authors

- AIDhaen E.

Abstract

A hazardous work environment creates critical concerns, and resultantly, workers may suffer from job-related stress.

So, this study aimed at identifying the nature of hazards prevailing in dental hospitals and their role in increasing job-related stress.

The study also assumes that awareness of the existence of health hazards and their possible risk will originate the stress.

To conduct the study, close-ended questionnaires were administered to 300 workers having more than 1 year of experience in Oral and Dental Health Services provided by the Kingdom of Bahrain.

In total, 222 responses with an acceptable level of accuracy were included for statistical treatment. Results confirmed the prevalence of ergonomic, biological, physical, and, to some extent, chemical hazards in the workplace.

Results revealed that stress befalls the employees as they know their exposure to these hazards.

Ergonomic hazards have the highest prevalence, chemical hazards are the least prevalent, while biological and physical hazards fall in between.

This study enriches the related bank of literature by tapping the hazards specifically in the dental hospitals' environment with the degree of intensity of their prevalence within the context at hand.

Toward Efficient Intrusion Detection System Using Hybrid Deep Learning Approach

Authors

- Aldallal A.

Abstract

The increased adoption of cloud computing resources produces major loopholes in cloud computing for cybersecurity attacks. An intrusion detection system (IDS) is one of the vital defenses against threats and attacks to cloud computing.

Current IDSs encounter two challenges, namely, low accuracy and a high false alarm rate. Due to these challenges, additional efforts are required by network experts to respond to abnormal traffic alerts.

To improve IDS efficiency in detecting abnormal network traffic, this work develops an IDS using a recurrent neural network based on gated recurrent units (GRUs) and improved long short-term memory (LSTM) through a computing unit to form Cu-LSTMGRU. The proposed system efficiently classifies the network flow instances as benign or malevolent.

This system is examined using the most up-to-date dataset CICIDS2018. To further optimize computational complexity, the dataset is optimized through the Pearson correlation feature selection algorithm. The proposed model is evaluated using several metrics. The results show that the proposed model remarkably outperforms benchmarks by up to 12.045%.

Therefore, the Cu-LSTMGRU model provides a high level of symmetry between cloud computing security and the detection of intrusions and malicious attacks.

Shariah, Presentation And Content Dimensions Of Web 2.0 Applications And The Firm Value Of Islamic Financial Institutions In The GCC Countries

Authors

- Musleh Alsartawi A.
- Reyad S.
- Madbouly A.

Abstract

Purpose: This study aims to examine the relationship between the three dimensions of Web 2.0 disclosure (Shariah, content and presentation) and the firm value of listed Islamic financial institutions (IFIs) in the Gulf Cooperation Council (GCC) stock exchanges.

Design/methodology/approach: A checklist of 118 items was used to measure the level of Web 2.0 disclosure for the IFIs that are listed on the GCC stock exchanges. Data were gathered from the websites of the IFI samples, where researchers looked for annual reports, RSS, widgets, web-casting and the layout and design of the websites.

Findings: Based on the results, the level of the Shariah dimension by GCC IFIs was 74.93%, the level of the content dimension was 76.33%, the level of the presentation dimension was 78.03% and the level of the overall Web 2.0 disclosure was 75.73%, and a positive and significant relationship between the content dimension and Tobin's Q.

Practical implications: In addition to other reforms, this study recommends IFIs to improve their regulations, risk management and standardization.

An Empirical Study On Company’s Perception Of Integrated Reporting In India

<div>Authors</div> <div><ul style="list-style-type: none">Mishra N.Nurullah M.Sarea A.</div>	<div>Abstract</div> <div><p>Purpose: International Integrated Reporting Council is in its 10th year of establishment and the integrated reporting (IR) framework released in 2013 was under revision in the year, 2020. Despite some significant developments in the past 10 years, the authors know very little about the perception of preparers towards IR. This paper aims to study the perception of the preparers and to understand the current status of the adoption of IR in India.</p><p>Design/methodology/approach: The top 500 companies from ET 500 list have been analysed. Banks and financial institutions (a total of 69) have been excluded for the study. Out of 431 companies, the status of IR has been checked by the questionnaire-based survey.</p><p>Principle component analysis, a dimensionality reduction technique was performed on the responses to understand the important components impacting the perception of companies. Also, a case study methodology has been adopted to compare and analyse the IR trends in the manufacturing and industrial sector.</p><p>Findings: The result shows that the majority of companies have a positive opinion about IR and the three major components impacting their perception are – concise reporting, effective and transparent reporting and finally, better decision-making.</p></div>

Advanced Feature-Selection-Based Hybrid Ensemble Learning Algorithms For Network Intrusion Detection Systems

Authors

- Mhawi D.N.
- Aldallal A.
- Hassan S.

Abstract

As cyber-attacks become remarkably sophisticated, effective Intrusion Detection Systems (IDSs) are needed to monitor computer resources and to provide alerts regarding unusual or suspicious behavior.

Despite using several machine learning (ML) and data mining methods to achieve high effectiveness, these systems have not proven ideal. Current intrusion detection algorithms suffer from high dimensionality, redundancy, meaningless data, high error rate, false alarm rate, and false-negative rate. This paper proposes a novel Ensemble Learning (EL) algorithm-based network IDS model.

The efficient feature selection is attained via a hybrid of Correlation Feature Selection coupled with Forest Panelized Attributes (CFS-FPA). The improved intrusion detection involves exploiting AdaBoosting and bagging ensemble learning algorithms to modify four classifiers: Support Vector Machine, Random Forest, Naïve Bayes, and K-Nearest Neighbor.

These four enhanced classifiers have been applied first as AdaBoosting and then as bagging, using the aggregation technique through the voting average technique. To provide better benchmarking, both binary and multi-class classification forms are used to evaluate the model.

A CSR Perspective To Foster Employee Creativity In The Banking Sector: The Role Of Work Engagement And Psychological Safety

Authors

- Ahmad N.
- Ullah Z.
- AIDhaen E.
- Han H.
- Scholz M.

Abstract

The entire service sector has acknowledged the importance of employee creativity. However, the underlying mechanism due to which employees are engaged in creativity has been relatively unexplored.

Moreover, where the banking service sector in advanced countries has realized the potential role of employee creativity for a bank’s success, the same was not fully realized in the context of a developing country, especially in Pakistan.

Against this backdrop, the current study is an effort to explore the underlying mechanism of employee creativity as an outcome of corporate social responsibility (CSR) with the mediating effects of work engagement (WE) and psychological safety (PS) in the banking sector of Pakistan.

Data were collected (n = 483) from banking employees through a self-administered questionnaire, which used the paper and pencil method. The hypotheses of the current survey were validated by employing structural equation modeling (SEM) in AMOS software.

The results confirmed that employee creativity, as an outcome of CSR, was significantly influenced by the CSR orientation of a bank. Furthermore, PS and WE produced a significant mediation effect (41%) between the relationship of CSR and employee creativity.

- Abdelsalam M.K.

Abstract

This research explores the intrinsic and extrinsic motivations driving donors to engage in fundraising appeals launched through social networking sites (SNSs) to mitigate COVID-19’s impact on vulnerable communities from a cross-national perspective.

The research adopted a quanti-tative approach through a web-based survey; a total of 801 donors were obtained from Kuwait and Bahrain and were useable for the analysis.

Smart PLS structural equation modelling was used to validate the research model and derive significant insights. In the Kuwaiti sample, we found that humanitarian projects, internet technology, SNSs and religiosity significantly drive donor attitudes towards online donation.

All these relationships are indirectly related to the intention to give via SNS through the mediating role of attitudes. As for the Bahraini sample, humanitarian projects, non-profit organizations (NPOs), SNSs, and religiosity significantly influence donors’ attitudes.

At-titudes, on the other hand, have a visible mediating role in the relationships between these predic-tors and behavioral intentions. The findings could be useful for the development of appropriate policies that boost online monetary donations to support emergency aid for communities crushed by the pandemic.

Sustainability Reporting In Food Industry: An Innovative Tool For Enhancing Financial Performance

Authors

- Buallay A.

Abstract

Purpose: This study investigates the relationship between the level of sustainability reporting and Food Industry Performance (operational, financial and market).

Design/methodology/approach: Using data culled from 1426 observations from 31 different countries for ten years (2008–2017), an independent variable derived from environmental, social, and corporate governance (ESG) score is regressed against dependent manufacture performance indicator variables [return on assets (ROA), Return on Equity (ROE) and Tobin’s Q (TQ)]. Two types of control variables complete the regression analysis in this study: firm-specific and macroeconomic.

Findings: The findings elicited from the empirical results demonstrate that there is a significant relationship between ESG and financial performance (ROE). However, there is no significant relationship between ESG and operational performance (ROA) and market performance (TQ).

Originality/value: This paper presents a new framework that considers sustainability reporting as an innovation tool, examining innovation in terms of its positive or negative impact on financial performance.

Investigating The Combination Of Deep Learning For Channel Estimation And Power Optimization In A Non-Orthogonal Multiple Access System

Authors

- Gaballa M.
- Abbod M.
- Aldallal A.

Abstract

In a non-orthogonal multiple access (NOMA) system, the successive interference cancellation (SIC) procedure is typically employed at the receiver side, where several user's signals are decoded in a subsequent manner.

Fading channels may disperse the transmitted signal and originate dependencies among its samples, which may affect the channel estimation procedure and consequently affect the SIC process and signal detection accuracy.

In this work, the impact of Deep Neural Network (DNN) in explicitly estimating the channel coefficients for each user in NOMA cell is investigated in both Rayleigh and Rician fading channels.

The proposed approach integrates the Long Short-Term Memory (LSTM) network into the NOMA system where this LSTM network is utilized to predict the channel coefficients.

DNN is trained using different channel statistics and then utilized to predict the desired channel parameters that will be exploited by the receiver to retrieve the original data.

Furthermore, this work examines how the channel estimation based on Deep Learning (DL) and power optimization scheme are jointly utilized for multiuser (MU) recognition in downlink Power Domain Non-Orthogonal Multiple Access (PD-NOMA) system.

Power factors are optimized with a view to maximize the sum rate of the users on the basis of entire power transmitted and Quality of service (QoS) constraints.

The Psychological Well-Being Of University Students Amidst COVID-19 Pandemic Scoping Review, Systematic Review And Meta-Analysis

Authors

- Ebrahim A.H.
- Dhahi A.
- Husain M.A.
- Jahrami H.

Abstract

This review aimed to summarise the current evidence relating to university students' psychological well-being amidst the COVID-19 pandemic.

A scoping review, using the Preferred Reporting Items for Systematic Reviews and Meta-Analyses extension for Scoping Reviews guidelines, was first conducted to determine if the evidence can be systematically reviewed and meta-analysed.

The search was performed via Google Scholar, MEDLINE/PubMed, Science Direct, Scopus and Web of Science.

A total of 90 original articles were selected for the scoping review. Meta-analysis of a total of 46,284 cases revealed an overall pooled prevalence rate of 29.1% (95% confidence interval [CI]: 20.9–39.0; K = 9, N = 22357) for anxiety symptoms and 23.2% (95% CI: 15.7–32.9; K = 12, N = 23927) for depression symptoms.

This data revealed that COVID-19 had a significant impact on university students' psychological well-being.

Evaluation Of Descriptive Type Answer Using Transformed Weight And Cosine-SVM

<div>Authors</div> <div><ul style="list-style-type: none">Meena K.Lawrance R.Suresh S.Ahmad Khder M.</div>	<div>Abstract</div> <div><p>Text Mining is the technique of obtaining high characteristic information from text. In recent years, applications of text mining are broadly used in the fields of multimedia, biomedical, patent analysis, anti-spam filtering of emails, linguistic profiling and opinion mining etc. To extract useful patterns from text, various tasks such as text preprocessing, feature extraction, pattern discovery and evaluation are performed on it. The proposed work has been developed as an efficient and effective classification algorithm for textual data base.</p><p>This algorithm helps to evaluate the descriptive type answers collected from the learners and also eliminate the discrepancy in manual evaluation. The implemented framework preprocesses the documents in two steps. Initially, the documents have been pruned and stemmed to moderate the size of the documents. Also, some of the feature extraction methods have been analyzed and implemented for feature extraction.</p><p>The existing feature extraction method Term-Frequency-Inverse Document Frequency (TF-IDF) assigns weight to the term, based on the occurrence. But the modified TF-IDF (M-TF-IDF) assigns weight to the term based on the occurrence and importance of the terms in the document. This weighting scheme is used to increase the accuracy of the classification algorithm. But this method does not consider semantic similarity of the term. Hence Latent Semantic Analysis (LSA) method is discussed to select the terms based on the semantic similarity.</p><p>The combination of M-TF-IDF and LSA has assigned weight to the terms based on the importance and semantic similarity between the terms. The Support Vector Machine (SVM) algorithm classifies the text document which depends on the kernel functions and cost parameter. The proposed work has introduced cosine similarity function as decision making function. The implemented framework Cosine-SVM (CSVM) classifies the new test data in three steps.</p><p>First, the cosine similarity value has been calculated between each group support vectors and the new test data. Then, the average is calculated between them and the similarity value has been checked. If the new test data has the highest similarity with any one group of support vectors, then the label of that group has been assigned to the test data.</p><p>The present work effectively and efficiently classifies the bench mark data set and hence it has also been used to evaluate the descriptive type answer written by the learners. This method has a number of benefits like increased reliability of results, reduced time and effort, reduced burden on the faculty and efficient use of resources.</p><p>© 2022 NSP Natural Sciences Publishing Cor</p></div>

Fostering Advocacy Behavior Of Employees: A Corporate Social Responsibility Perspective From The Hospitality Sector

Authors

- Ahmad N.
- Ullah Z.
- AIDhaen E.
- Han H.
- Ariza-Montes A.
- Vega-Muñoz A.

Abstract

Considering the stiff competitiveness situation in every sector, promoting the advocacy behavior of employees is of seminal importance for an organization.

With this regard, the hospitality sector has no exceptions, however, a review of the prior literature uncovers that most of the prior studies on advocacy behavior were conducted from the standpoint of consumers, and the role of employees' advocacy behavior, especially in the context of the hospitality sector, remained an understudied area.

Research also shows that the corporate social responsibility (CSR) efforts of an organization can significantly influence employees' behavior but the relationship of CSR to spur employees' advocacy behavior was not discussed earlier.

Against this knowledge gap, the current work aims to investigate the relationship between CSR and employees' advocacy behavior in the hotel sector of a developing economy with the mediating effect of employees' engagement.

A hypothesized model was developed, which was validated by collecting data from different hotel employees through a self-administered questionnaire.

Arduino Based Obstacle Awareness Vest For Blind People

Authors

- El-Alfy Y.E.
- Al-Goud A.A.
- Aldallal A.S.

Abstract

Problems and challenges in many different daily tasks including the mobility, navigation, obstacle detection, and basic orientation. This work proposes a system that uses affordable, lightweight, easy to handle and programmable vest that can help them navigate their surroundings and live their lives normally like other people and safe from injuries.

This system first uses the securely mounted ultrasonic sensors and servo to measure the distances of multiple different points. Then the Arduino microcontroller compares the measured distances with a pre-set threshold distance.

Finally, the vibrators are turned on if an obstacle is detected closer than the set threshold. We were able to test a prototype on some blind folded subjects to mimic blindness and it showed successful and promising results in detecting the obstacles position and alerting the user.

Once utilized by blind and impaired people, this system will provide them comfortable and safe from injuries movement.

Intellectual Structure Of Knowledge Management: A Bibliometric Analysis
Of The Journal Of Information And Knowledge Management

Authors

- Nasrallah N.
- Atayah O.F.
- El Khoury R.
- Hamdan A.
- Obaid S.

Abstract

The Journal of Information and Knowledge Management (JIKM) published its first issue in 2002 and celebrated its 19th birthday in 2020.

This study aims to assess JIKM performance over its lifetime between 2002 and 2020 by extracting data from the Scopus database and using a combined approach of bibliometric and content analysis.

More specifically, we evaluate JIKM's productivity and stature, discuss its performance compared to other journals, and identify key contributing (authors, institutions, and countries), citation pattern, and conceptual structure.

The results highlight JIKM's growing presence, which is reflected in the dual rise of publication activity and accumulated citation.

JIKM becomes one of the preeminent journals in the area of knowledge management, with a broad range of scientific actors' contributions (authors, institutions and countries) from all over the world.

Furthermore, using a bibliographic coupling, keywords' analysis, and co-authorship analysis, we analyse JIKM's content and identify the most frequent themes discussed.

The analysis reveals that JIKM has expanded its scope from knowledge management to a new array of emerging technologies' topics such as artificial intelligence and data mining.....

Abstract

Opportunities for children with disabilities to attend school n an equal footing with their peers are frequently emphasized, despite the fact that many children with disabilities remain segregated.

For children with impairments, information and communication technology (ICT) has been recognized as a tool for communication and inclusion. ICT (Information and Communication Technologies) has generated the so-called "digital gap" as a result of technological advancement.

Some people are unable to respond to advancement on an individual basis, but with the right use of ICT, they can overcome this handicap. Higher education is becoming more accessible to students with disabilities.

In this study, we have discussed the benefits that ICT are providing to these students and the people with normal life as well. ICT have revolutionized the world and are serving in a better way.

Further, we have discussed a study to compare the usage of ICT in school activities of two groups of students with physical disabilities, those who used and those who did not use a computer-based assistive technology device (ATD), and students from the general population.

We present a study about main problems reported in a survey in some latinamerican countries in the use of ICT supporting teaching-learning process for disabled children. © 2022 CEUR-WS. All rights reserved.

The Acceptance And Practicality Of Digital HRM In Nigeria

Authors

- Adisa T.A.
- Adekoya O.D.
- Abdulraheem I.
- Mordi C.

Abstract

Despite the prominence and the exponential number of research undertaken on digital human resource management and related concepts such as the digitisation of human resource management, the digital transformation of human resource management, and the digital disruption of human resource management, especially in the global north, the concept has still not been well established and researched in Africa.

This chapter, therefore, examines the acceptability and practicability of digital HRM in Nigeria. Drawing on 31 semi-structured interviews with human resource managers, the article found that the acceptability and practicability of digital HRM in Nigeria are still far-off and almost hypothetical at the moment. We found that organisations and human resource managers are affixed to the old methods of delivering human resource functions, lack of required skills to go digital, and lack digital mindsets.

We thus suggest that a ‘growth mindset’ rather than a ‘fixed mindset’ will enhance acceptability and adaptability of digital HRM, employee potentials, and organisational outcomes in Nigeria.

Introduction: Context Matters In Human Resource Management

Authors

- Adisa T.A.
- Mordi C.
- Gbadamosi G.

Abstract

Human resource management (HRM) relates to all aspects of people management—from identifying, attracting, recruiting, and selecting people to managing them while in the organisation, to developing and enhancing their competence, evaluating their performance and finally managing their exit from the organisation.

For some scholars (e.g., Guest, 2017; Kochan, 1994), HRM also include evaluations of processes and systems for everyday management of people including longer-term HR planning, well-being, and the management of the interface between production process and technologies, as well as the administration of the employment contract and reward systems. In essence, HRM is about employment relations and the management operational approach, and how these affect the existing and prospective workers (Wood & Budhwar, 2021).

E-Readiness Of The Universities During The COVID-19 Pandemic: Evidence From Bahrain

Authors

- Sarea A.
- Taufiq-Hail G.A.-M.

Abstract

This study examines the E-readiness of the Universities during the Covid-19 pandemic in the kingdom of Bahrain. The study uses quantitative methods and purposive techniques in collecting data during the Covid-19 pandemic.

The data were collected from public and private universities in Bahrain during the Covid-19 pandemic. The public and private universities in Bahrain turned to remote learning during the Covid-19 pandemic.

The main results revealed the influential role of Covid-19 on teaching methods and the readiness of the Academic staff during the Covid-19 outbreak. This study highlights the impact of Covid-19 on the Academic staff's readiness in using and learning new skills to disseminate the courses' contents among students.

The need of significant investment and IT governance infrastructure is essential for the digital transition in public and private universities in Bahrain.

Ensemble Learning For Sentiment Analysis Of Translation-Based Textual Data

Authors

- Omran T.
- Sharef B.
- Grosan C.
- Li Y.

Abstract

Ensemble learning is a technique that combines several learners to generate a model characterized by more generalized predictions than the constituent learners.

Despite the number of conducted studies about ensemble learning of sentiment analysis and the ones that studied the impact of translation on sentiment analysis, the studies that consider ensemble learning on translated text are limited.

Here different techniques of ensemble learning such as bagging, boosting, and stacking were applied to classify an English dataset that was translated to modern standard Arabic, which in turn translated manually to Bahraini dialects.

Interestingly, this study revealed the outperformance of stacking ensemble based on LSTM as base-learners and decision tree as meta-learner over the other ensemble techniques by achieving 99.52%, 99.25%, and 98.52% of mean accuracy in English, modern standard Arabic, and Bahraini dialects, respectively.

Marketing And Entrepreneurship: Challenges And Opportunities

Authors

- Alareeni B.
- Hamdan A.
- Hamdan R.
- Shoaib H.M.

Abstract

In the current special issue, we emphasize that entrepreneurial marketing is influential for enterprises to endure competitive, customer inspiration, relevant, satisfaction and loyalty in the market environment.

The aim of the special issue is to generate academic debate about the importance of marketing to entrepreneurship. The best research papers were selected from International Conference on Business and Technology ICBT’2021 conference, which were evaluated by the guest editors, and all were subject to double blind peer review.

The conduction of quantitative, qualitative, or mixed-method research is essential to expand theories and discover opportunities and challenges facing Small and medium-sized enterprises SMEs while formulating entrepreneurial marketing strategies.

Concerning the existing contextual gap, even though social entrepreneurship varies in different countries from legitimate and conceptual perspectives, it is clear that it has received less attention in some contexts.

Therefore, we highlighted many of these topics within the papers selected to be published in this special issue.

- Hamdan A.
- Albastaki Y.
- Bakir A.

Abstract

Purpose: Consumers frequently use electronic payments (e-payment) as their first step into formal financial services. The advancement of information and communication technology, on the other hand, has resulted in several achievements for human civilization, altering people’s lives, behaviors and societal measures. This study’s main aim is to investigate issues and identify the factors that are likely to influence customers’ acceptance of implementing e-payment in the Kingdom of Bahrain.

Design/methodology/approach: A quantitative research approach was adopted to test the influence of e-payment data security, trust, ease of use, usefulness and accessibility on customers’ acceptance of the service. A questionnaire survey was electronically administered to a purposive sample, and 531 responses were returned, achieving the required sample size for the study. Descriptive statistics analysis was used to ascertain data validity and consistency, and regression analysis was used to test the model's hypotheses.

Findings: The findings of this study demonstrated a high influence of the mentioned factors on the e-payment acceptance of the customers in the Kingdom of Bahrain...

The Usage Of Internet Of Things In Agriculture: The Role Of Size And Perceived Value

Authors

- Sharef B.T.

Abstract

The application of internet of things (IoT) has reached all fields and industries with variation among countries.

One of the industries that received less attention is the agriculture. This research intended to identify the factors that affect the intention to use IoT (IUIoT) among farmers in developing countries such as Iraq.

Based on technology acceptance model (TAM) and theory of planned behavior (TPB), this study proposed that perceived usefulness (PU), perceived complexity (PC), subjective norms (SN), reliability (RE) and cost saving (CS) will affect the IUIoT.

Perceived value (PV) is proposed as a mediator while land size is proposed as a moderator. The data of this study was collected from 223 farmers in Iraq using purposive sampling.

The analysis of Smart PLS showed that the effect of PU, PC, RE, SN, and CS on IUIoT are significant.

PV mediated fully the effect of PC and partially the effect of other variables on IUIoT. Land size did not moderate the effect of PV on IUIoT.

Decision makers are recommended to ease the process of using the IoT and to enlighten farmers about the benefits of using the IoT.

Developing A Model Of Smart Home Usage Among It Specialists: The Role Of Machine Learning

Authors <ul style="list-style-type: none">Sharef B.	Abstract <p>Models of smart home usage dominate in developed countries, while in developing countries, they are still lacking.</p> <p>Technology Acceptance Model (TAM) is widely used in the context of smart home, and few studies examined other technology acceptance theories. The purpose of this study is to examine the experience of using smart home by Information Technology (IT) specialists in the Gulf Cooperation Council (GCC).</p> <p>The study deploys existence theories and proposes that the effect of relative advantage, convenience, accessibility, and cost on the intention to use smart home is positive. In addition, it was suggested that intention to use, as well as facilitating condition, directly affects the actual use of smart home.</p> <p>The knowledge of machine learning was proposed as a moderator between intention to use and actual use. The data were collected from IT specialists in the GCC using purposive sampling.</p> <p>The analysis was conducted using the Analysis of moment structures (AMOS). The findings showed that convenience, accessibility, and relative advantage have a positive effect, while cost has a negative effect on the intention to use smart home.</p>

Intelligent Traffic Management System For Smart Cities Utilizing Reinforcement Learning Algorithm

Authors

- Rajan K.

- Kannapiran T.
- Khan S.
- Al-Dmour A.
- Sharef B.T.

Abstract

Traffic congestion on roadways or at intersections can occur for a variety of reasons, including increased vehicle queues, slow driving, and so on. When multiple emergencies occur at the same time, traffic gridlock may occur.

An adaptive traffic control system is a traffic management method that allows signals to adapt to the current traffic demand in real time. Adaptive traffic signals work by synchronizing software and hardware.

Q-learning necessitates the creation of accurate natural environment forms prior to taking action. Instead, a dynamic communication system was developed to explore the interplay between state, action, and rewards in that particular setting.

The current traffic signal functions are based on predetermined traffic flow information to extract short time expectations, making it easier to calculate the signal management system's conclusion.

If a certain model is used, then customizable traffic light management agents will have to collect photos of the current traffic situation and generate control signals at regular intervals. To improve the algorithm's stability, replay, occurrence, and ideal techniques have been implemented.

Immersive Technology Systematic Review And Challenges

Authors

- Fujo S.W.
- Khder M.A.
- Safdar S.

Abstract

Since the starting of Immersive technologies field a rapid and continues research done and linked strongly to different areas of immersive technologies. An immersive technology systematic literature review (SLR) is done in this research in variant settings: Tele-immersive, 3D, gaming, virtual reality, augmented reality, etc.

To address the immersive technologies issues a wide range of articles had been studied ACM publications in the period 2008 - 2021 to cover the latest issues in immersive technologies.

Based on exclusion and inclusion conditions, ninety-three studies were chosen for the final investigation. This SLR analyzed the information from the specified research, their hypothetical, challenges that had been address, limitations and future work of the studies.

Therefore, this paper specifies the constraints of recent research and future domain in the field of immersive technologies.

COVID-19 Exposure: A Risk-Averse Firms' Response

<div>Authors</div> <div><div><ul style="list-style-type: none">Nasih M.Wardani D.A.K.Harymawan I.Putra F.K.G.Sarea A.</div></div>	<div>Abstract</div> <div><p>Purpose: Without a doubt, COVID-19 is a disruptive event that one may not consider before it becomes a global pandemic. This study aims to examine the firm's risk preference, represented as board characteristics towards COVID-19 exposure in Indonesia.</p><p>Design/methodology/approach: This study uses the boardroom's average value of board age and female proportion to represent board characteristics. Fixed-effect regression based on industry (Industry FE) and year (Year FE) analyses 861 firm-year observations of all firms listed on the Indonesian Stock Exchange in 2019–2020.</p><p>Findings: The result shows a positive relationship between the female board and COVID-19 exposure disclosure. Meanwhile, the age proportion does not offer a significant result. The additional analysis document that the directors mainly drove the result and were only relevant during 2020. These results are robust due to coarsened exact matching tests and Heckman's two-stage regression. This study enriches COVID-19 literature, especially from a quantitative perspective.</p><p>Originality/value: The rise of global crises makes the outputs of this study important for non-financial listed firms in Indonesia.</p><p>© 2022, Emerald Publishing Limited</p></div>

Deep Learning And Power Allocation Analysis In NOMA System

<div>Authors</div> <div><div><div></div><div></div><div></div></div><div><div>Gaballa M.</div><div>Abbod M.</div><div>Aldallal A.</div></div></div>	<div>Abstract</div> <div><p>This study shows how the channel estimation based Deep Learning (DL) and a power allocation method are together employed for multi-user detection in a Power domain Non-Orthogonal Multiple Access (PD-NOMA) network. Successive interference cancellation (SIC) procedure is typically employed at receiver side, where numerous users are decoded in a successive approach.</p><p>Fading channels may scatter transferred signal and initiate dependencies between scattered components, this might influence the channel estimation technique and therefore impact the SIC procedure and signal recognition precision.</p><p>In our proposed scheme, the influence of Deep Neural Network (DNN) in clearly approximating the channel parameters for users in NOMA cell is inspected. In our scenario, we incorporate the Long Short Term Memory (LSTM) layer with NOMA cell where the LSTM is employed for complex data management to perform training and predication.</p><p>The DNN is trained online on basis of random channel models and then the trained network is used to approximate the channel taps that will be utilized by the receiver in recovering the desired symbols.</p><p>Additionally, power factors for user's devices are optimized to maximize the sum-rate of users where whole power and Quality of service (QoS) restrictions are considered.</p></div>

The Impact Of Artificial Intelligence (AI) In The Oil And Gas Industry

Authors

- Jaara A.
- Hamdan A.
- Mushtaha S.

Abstract

Artificial Intelligence (AI) has become one of the most popular technologies and technological tools. The capabilities and use cases of AI have only increased, both in scope and complexity over the past few years.

What initially started as a simple idea in the 1950s has now grown into perhaps the most influential twenty-first century technologies.

In the industrial sector, the use of AI has become more and more common and even popular, given the unique problems the sector faces. In this paper, the potential of applying AI in the oil and gas sector is explicated.

This is as a consequence of the significant impact that AI is bound to have on advancing the oil and gas sector moving into the future. It was established that the adoption of AI will provide credible solutions to the most pressing challenges faced by the sector.

The Influence Of Cybersecurity On The Firms’ Financial Performance

Authors

- Sulaiman N.
- Hamdan A.
- Al Sartawi A.

Abstract

The acceleration of cyber-attacks in the past few years certainly has negative influences on the investors and shareholders' trustworthiness in the firms' abilities to protect their interests.

This is likely to be reflected on the firms' shares price. Thus, the influence of cybersecurity on firms' overall performance is a questionable issue. To be able to proceed through the cyber risks, firms face the challenge of enhancing their cybersecurity to avoid and combat against the endless cyber-attacks.

Further to that the studies that cast light on the relationship between cybersecurity and firms' performance from a holistic perspective are lacking.

Artificial Intelligence: Chatbot—The New Generation Of Communication

Authors

- Altarif B.
- Al Mubarak M.

Abstract

Marketing tactics have changed in response to the growth of technology and its quick conversion in order to accomplish consumers' requirements. Because of the rapid growth of artificial intelligence, companies and organizations are increasingly utilizing AI-guided chatbots to improve service on their portals (AI). The decline in face-to-face services as a result of the COVID-19 epidemic has hastened this tendency.

Because of recent developments in AI and machine learning, as well as broad usage of the internet and messaging platforms, businesses are focusing on chatbots.

Chatbots are computer programs powered by artificial intelligence that can communicate with humans and engage in active dialogue. Because they are aware of human capabilities, they are sometimes known as virtual assistants. Chatbot technology is essential for famous product lines to prosper in the coming years.

The paper's major goal is to identify chatbots as an AI technology and to find the link between the two terms to determine how they contribute to various industries and marketing tactics, to create a better understanding to be used as a means of customer communication.

The paper's findings demonstrate that chatbot technology could be a beneficial technology that enables consumer to communicate.

Challenges Of The Industrial Iot (IIoT) In Higher Education In The Kingdom Of Bahrain

Authors

- Janahi Y.

Abstract

The Industrial Internet of Things (IIoT) is a fluid concept that evolves in response to shifts in digital technology, requirements, and markets. Higher education today needs to embrace and learn about the new ways that people, machines, services, and data can interact.

Transitioning from higher education to work is a challenge that could be more readily overcome if all parties involved, from individuals to organizations, businesses to governments, collaborated.

Because higher education is moving at a snail's pace, all stakeholders must work quickly to prepare for the Industrial Internet of Things. Employers expect critical thinking and analysis, as well as problem-solving and self-management skills like active learning, resilience, stress tolerance, and flexibility, to become more important in the years leading up to 2025.

Demand for trained individuals will rise as the IIoT expands. One option to narrow the skills gap is through education, which can include effective skills, re-skilling, and up-skilling programs.

Moreover, Higher education must incorporate the latest technologies to adapt to new ways in which people, machines, services, and data interact. Likewise, the training requirements in a variety of sectors must be extensively investigated in order to provide a better environment for Industrial IoT education.

Academic and High Vocational Education and Training (HVET) programs, work-based learning, educational virtual and remote laboratories, national and international educational legislation and instruments, extensions, and so on should all be investigated.

Curriculum creators and planners at HEIs are currently defying the problems brought by technological development head on. The Kingdom of Bahrain is working hard to develop a knowledge-based, diverse economy in order to provide all citizens with a fair and complete education and to increase lifetime learning possibilities.

This aligns with Bahrain's Economic Vision 2030 objectives.

The Impact Of Digitizing Business Education On The Quality Of Education During COVID-19 Pandemic: The Role Of International Accreditation Bodies

Authors

- Alromaihi A.A.
- Hamdan A.

Abstract

The role of business schools in delivering social and economic value for a nation is now more important than ever. After completion of the degree requirements, business schools graduate their students to join the labor market accordingly to fuel the economy.

Further, this underlines the importance of business education. At the end of 2019, COVID-19 erupted the educational sector as well as it erupted other major sectors in the world. This forced higher educational institutions (HEIs) to switch to digital learning which was accompanied with many challenges.

Learning Management Systems (LMS), evaluation and interaction have an impact of the quality of education in a digital setting classroom. Therefore, international accreditation bodies are responsible during the time of the pandemic to ensure that HEIs provide education of quality as it was pre-pandemic and to provide full support to HEIs to overcome challenges accompanied with ensuring quality in digital learning.

Future research needs to conducted to assess to what extent business tertiary education programs graduates reflected the learning outcomes and skills acquired at their workplaces.

The Challenges And Factors Influencing The E-Learning System Usage During COVID-19 Pandemic

Authors

- Hassan A.

Abstract

This study aims to assess the experience of e-learning, especially in the post-Coronavirus period, and the challenges facing this experience.

The study evaluated this experience depends on the review and analysis of all documents related to e-learning and the various experiments applied.

The results revealed the challenges facing the electronic transformation process and how to overcome.

And the evaluation of this experience in e-learning in the period of Corona and the future of this type of education in the post-Corona period.

The Role Of Artificial Intelligence In Human Resources

Authors

- Hassan A.

Abstract

The study aims to identify the Role of Artificial Intelligence (AI) in human resources (HR) especially after Corona Virus (19) pandemic.

The study showed that human resources have become part of the heart of the organization, linking all parties together, relying on artificial intelligence has become a must in the era of transformation we are witnessing.

The study also showed that examples include looking at the candidate's experiences for the job and reading all the resumes submitted to choose the most suitable candidate, because recruitment is a long-term process, and it is not easy to undo, and the HR staff is united and their knowledge, where artificial intelligence provides a common summary that avoids them focusing on different and contradictory matters.

In Influencers We Trust? A Model Of Trust Transfer In Social Media Influencer Marketing

Authors

- Almahdi M.H.
- Alsayed N.
- Alabbas A.

Abstract

This study is designed to investigate whether customers' trust in social media influencers translates to them trusting the brands endorsed by said influencers. It, additionally, explores the role of brand liking and ad enjoyment in this model of trust transfer.

Data was collected from 354 respondents who were asked to complete online survey questions after watching video adverts featuring social media influencers endorsing different brands. The dataset was then analyzed using PLS-SEM techniques. Based on the analysis, influencer trust was found to positively affect brand trust, brand liking, and ad enjoyment. Brand liking was also found to positively affect customers' brand trust.

However, there was no support of ad enjoyment's effect on customers' brand trust. The results lend support to the theory of trust transfer in the context of social media influencer marketing. The findings from this study are useful for social media influencers, as they highlight the importance of nurturing a trusting relationship between them and their audience.

This trust is expected to transfer to customers' trusting in and liking of endorsed brands and therefore contribute to the success of the social media influencer business model.

The Role Of Artificial Intelligence In Knowledge Management

Authors

- Alghanemi J.
- Al Mubarak M.

Abstract

Until the introduction of artificial intelligence, knowledge in organizations was a unique ability of humans. Since the revolutionary development of AI, the impact of data system and businesses developed significantly, such as collecting, storing, processing, maintaining, transmitting, and making content accessible.

Humans are no longer the sole sources of knowledge. Artificial intelligence is becoming a key element in knowledge generation processes in enterprises. The purpose of this research paper is to investigate how knowledge practices can benefit from AI technology and understand the role of applying artificial intelligence in terms of knowledge management area and its impact on organization.

This article discusses concepts and classifications related to the application of artificial intelligence in knowledge processes in businesses, based on a review of scientific literature.

The outcomes can operate as a platform for future studies on the fundamental effect of applying artificial intelligence in knowledge innovation process on employees and businesses.

Interns’ Self-Efficacy, Internet Addiction, Wellbeing, And Online Learning Experiences: A Descriptive-Correlational Study

Authors

- Ebrahim A.H.
- Helmy M., Engel E.
- AlQoud K.
- AlShakoori H.

Abstract

The ramifications of Internet addiction on psychological and social wellbeing have been extensively demonstrated in previous studies involving college students, but examining the mediating role of Internet addiction between self-efficacy and overall wellbeing has not been well-investigated, particularly among interns.

This study first assessed the online learning experiences of a sample of interns during the COVID-19 pandemic and then explored the association between three constructs: self-efficacy, Internet addiction, and overall wellbeing.

Fresh graduates engaging in an online internship program were recruited to participate in a cross-sectional online survey during the outbreak of COVID-19 in Bahrain.

Self-administered scales of General Self-Efficacy (GSE), Internet Addiction Test (IAT), and PERMA Profiler were used to collect data about self-efficacy, Internet addiction, and overall wellbeing.

Pearson’s correlation coefficient was used to measure the strength of the hypothesized relationships between these three constructs. A structural equation model was used to analyze the mediating role of Internet addiction.

Overall, the higher the self-efficacy the participants perceived, the lesser Internet addiction they exhibited (r = −0.23, p = 0.02), and the more wellbeing they felt (r = 0.45, p < 0.01). Internet addiction has been found as a mediating factor between self-efficacy and overall wellbeing (b = 0.12, p < 0.001). 61.5% of the participants had mild to moderate levels of Internet addiction.

Experiencing less communication with colleagues because of online learning was one of the top-rated online experiences and consistently, enjoying positive relationships was the lowest-rated pillar of PERMA.

Therefore, problematic Internet use that negatively affects individuals’ health should be managed through self-efficacy-boosting strategies. Further, fostering communications and social connectedness disrupted with excessive reliance on virtual environments demands special attention by counseling psychologists and e-education providers/developers.

Societal Partnership In The Fourth Era Of Industrial Revolution Between The Media And Civil Society Institutions Aiming To Reducing The Demand For Drugs

Authors

- Dhaif Z.H.

Abstract

In an initial exploratory attempt, the study sought to identify the features of the work of the media and civil society institutions within the limits of their capabilities in community participation in light of the Fourth Industrial Revolution, aiming to reduce the phenomenon of drug abuse as well as to develop appropriate solutions to combine the efforts of civil society organizations and the media, to deal with the issue as a social issue related to community security.

This issue needs urgent solutions as civil society gains its strength from the fact that it includes a group of institutions that can create an atmosphere for cooperation and effective participation with the media in light of the cultural, economic and technological changes that the world is witnessing and the reflection of drug dangers on the social system of local communities.

The Impact Of Artificial Intelligence On The Banking Industry Performance

Authors

- Husain A.R.A.M.
- Hamdan A.
- Fadhul S.M.

Abstract

Artificial intelligence (AI) is an advance technology which has positioned itself as one of the revolutionary technology. As a result of increased adoption of new technical advancements, the artificial intelligence industry has grown at an unprecedented rate and is now being implemented in a wide variety of fields.

Artificial intelligence systems have the potential to alter the banking industry's whole operations and to enhance the banks' performance. They are referred to as (AI) and are met with excitement owing to their capacity to make human-like judgments and avoid human-like mistakes.

While artificial intelligence has been implemented more broadly in certain sectors than others, the banking industry is one of the few that has shown a reasonable degree of acceptance and implementation of this technology. This literature review defines artificial intelligence, explains how it is being used in banks and specifies the impact of it on banks' performance.

The Relationship Between Food E-Advertising And Children’s Obesity In Bahrain

Authors

- Affooni A.
- Hamdan A.

Abstract

E-advertising has become an indispensable tool for companies to advertise their goods and services since social media networks started consuming a substantial portion of people's time.

Unfortunately, with the increasing time spent by people on the internet and the lack of movement in general obesity rates in Bahrain are skyrocketing. This paper studies the relationship between food E-advertising and children’s obesity and clarifies the effect that advertising can have on consumer behavior.

Throughout the related literature, the definition, and reasons of obesity in Bahrain will be established, put forward the history and effect of advertising in general and food advertising in specific.

Technological Sustainability In The Twenty-First Century

Authors

- Hamid H.
- Al Mubarak M.

Abstract

Sustainability is all about saving the planet for future generations, and technology has become an integral part of its assistance. For the researchers, the use of legitimate secondary sources has reduced the study time and allowed them to analyze data from many authentic secondary sources.

The researcher in this study has decided to employ qualitative data to perform the investigation and reached the conclusion that the world needs both scientific know-how and creative thinking to combat today’s global challenges.

For example, textiles’ future growth and use will be profoundly impacted by nanotechnology. Ideas and information must be disseminated by using social media.

Nursing education and practice should make use of this potential. Blockchain technology may be used to improve the internet's centralization, transparency, egalitarianism, and accountability.

Future emissions and energy usage may be reduced by using electric vehicles in the transportation industry. There are many more dangers and risks linked with artificial intelligence than there are with our existing conveniences.

Data transparency may be improved by using the blockchain in an area where sharing information is required. Thus, technological sustainability is not merely a phrase but a purpose to improve the economy, society, and the environment.

The Usage Of Financial Technology Payments During The Pandemic Of COVID-19

Authors

- Alchuban M.
- Hamdan A.
- Fadhul S.M.

Abstract

Financial Technology (Fintech) is the implementation of the latest technology advancement to enhance financial operations.

It is used to automate these operations and make them more simple, improve their productivity and quality and reduce human interactions. Fintech payment is used widely to perform financial transactions electronically through many channels and products.

Fintech is used to advance payments by implementing technology in Credit and Debit Cards, constantly improving mobile and online payments and banking, attaching new features in ATMs, and allowing customers to initialize digital wallets. During the pandemic of Covid-19, there has been an increase in the usage of Fintech payments technologies.

In addition, many payment services have been introduced to help with the procedures implemented to reduce the spread of the virus. This literature review concentrates on Fintech payments and focuses on factors affecting the usage of these payments.

The factors which will be focused on are Covid-19, Regulations, Customer Experience, and Quality of payments products and services.

The Impact Of Artificial Intelligence On Accounting And Auditing In Light Of The COVID-19 Pandemic

Authors

- Alareeni B.
- Hamdan A.

Abstract

The relationship between Accounting, Audit activities, and Artificial Intelligence (AI) is extensive and continues to grow, especially now, in the time of the COVID-19 pandemic.

All activities in these fields have now used online tools amid COVID-19 pandemic and many activities and practices are carried out taking the pandemic safety measures. The COVID-19 pandemic has impacted human behavior in many aspects and governments all over the world try to decrease the impact of it on businesses and economies.

Thus, many efforts have been made to impose the COVID-19 safety measures that use modern technologies. This shows us that there is a need for efforts and extensive research to overcome this problem.

AI is a technology used to better efficiency, quality, safety, and solve many problems, quicker than the traditional workers. In this paper, we will direct the researchers' attention to the problems that arise in the field of accounting and auditing because of the ongoing pandemic and suggest some topics to researchers to work on them and help to discover the impact of AI on Accounting and Auditing professions amid and post COVID-19 pandemic.

The Adoption Of Technology Management Principles And Artificial Intelligence For A Sustainable Lean Construction Industry In The Case Of Bahrain

<div>Authors</div> <div><div><div></div></div><div><div>Aljawder A.</div><div>Al-Karaghoulí W.</div></div></div>	<div>Abstract</div> <div><p>The concept of lean management has been of interest to researchers and practitioners in the construction industry and is implemented in most countries. While achieving waste mitigation in developed countries, lean is still in its elementary stages in the Middle East.</p><p>Moreover, the implementation in the Middle East poses more challenges than benefit when choosing the right lean tools and techniques for projects. This study will critically investigate the factors affecting the process of adopting lean tools and techniques, which are directed towards technology, artificial intelligence and IoT in the construction industry in the public sector in the four governates of the Kingdom of Bahrain.</p><p>Thereafter, the investigation will determine the level of lean construction management implementation and consequently its effect on sustainability using a quantitative method. The result from the questionnaire is hoped to shed a light on the poorly researched topic in Bahrain and benefit academics and practitioners.</p><p>© 2022 Informa UK Limited, trading as Taylor & Francis Group</p></div>

Under The COVID Pandemic: Is It The Springtime For Forensic Accounting Field To Blossom?

Authors	Abstract
<div><div></div><div>Al Shehab N.A.</div></div>	<p>While the principle of financial fraud remains the same, new methods and means have been developed as a result of the advanced technology. Due to the large financial scandals which have been recorded throughout the history, the need for “Forensic Accounting” has dramatically increased within business sphere.</p> <p>The pandemic of COVID-19 breeds several challenges for both governments and business firms in alleviating corporate scams, corruption, bankruptcy, money laundering, cybercrimes, and the like. The impact of such illegal practices hits the financial reporting and ultimately leads to misleading decisions. In fact, the internal and external auditors play different roles than the forensic accountants do.</p> <p>Seemingly, auditing and forensic accounting function in one area, but each drives its own way. Therefore, it is vital nowadays to assign forensic accountant who is well equipped with adequate knowledge, skills, and experience. Equally, it is essential to introduce forensic accounting education to meet the existed marketplace demands.</p> <p>This chapter is devoted to provide an overview about the concept of forensic accounting and how the entire world has significantly affected by the white-collar crimes especially during the global lockdown. In addition, it will clear the misunderstanding between forensic accounting and auditing.</p>

Assessing The Perceived Usability Of An Intelligent Contact Tracing App To Prevent The Spread Of Covid-19 Using SUS And TAM: Be Aware Bahrain

Authors

- Albastaki Y.

Abstract

Contact tracing apps are critical public health precaution and a key component of COVID-19 control initiatives.

For a contact tracing app to be successful, it must be adopted and used by the public, and a low adaptation rate has become a key to preventing many apps from reaching their full potential.

Bahrain, like many other countries, developed a contact tracing app named ‘BeAware’ Bahrain. This article presents a survey experiment (N= 405) Bahrain to investigate ‘BeAware’ Bahrain contact tracing app acceptanc through the concept of usability.

The study utilizes HCI technique through the usage of the SUS and it also utilizes an IS technique through the usage of TAM to evaluate the ‘BAware’ Bahrain contact tracing app usability.

The survey findings of citizens and residents of Bahrain demonstrate that both SUS and TAM techniques demonstrated similarity and equivalency, with the TAM’s PEOU showing high similarity with SUS.

Managers As Autonomous Action Researchers: A Practice-Centric Framework

Authors

- Ebrahim A.H.
- Ganguli S.

Abstract

Although action research (AR) has been extensively acknowledged in the literature as an exclusive work-based learning project majorly carried out through higher education, no studies -to our best knowledge- proposed AR to be applied as a typical role at the professional management practice level.

Therefore, this study sheds light on that existing gap using the literature to support the argument that managers need to practice AR as a key managerial role for learning and change without being necessarily affiliated to an academic program.

By reviewing evidence related to AR attributes, approach, application in different managerial roles and its early practice, the study offers a pragmatic and practice-centric framework of AR to support managers in undertaking the role of action researchers autonomously and within the scope of their work.

Explicitly, this framework is composed of six building blocks; namely, AR cyclic process, data collection and analysis, experimentation activities, applied knowledge, evidence-based change/improvement and development of executive scholars.

These blocks are significantly influenced by three dynamic forces: researching managerial behavior, participation and workgroup and research-driven management culture.

The Role Of Artificial Intelligence In Sustainable Finance

Authors

- Musleh Al-Sartawi A.M.A.
- Hussainey K.
- Razzaque A.

Abstract

This Special Issue includes several articles on a variety of issues related to sustainable development, ESG investing and the role of Artificial Intelligence in helping creditors, investors and business managers in making optimal decisions to ensure long-term financial sustainability.

In this context, it can be argued that it is necessary to consider the challenges and opportunities presented by AI in providing solutions to sustainability issues. In addition to outlining the articles in this Issue, this Editorial provides new insights from the literature on the importance of AI applications and models, for sustainable investments and understanding the value of AI beyond a problem-solving tool.

Deep Learning-Based Iraqi Banknotes Classification System For Blind People

<div>Authors</div> <div><ul style="list-style-type: none">Awad S.R.Sharef B.T.Saiih A.M.Malallah F.L.</div>	<div>Abstract</div> <div><p>Modern systems have been focusing on improving the quality of life for people. Hence, new technologies and systems are currently utilized extensively in different sectors of our societies, such as education and medicine.</p><p>One of the medical applications is using computer vision technology to help blind people in their daily endeavors and reduce their frequent dependence on their close people and also create a state of independence for visually impaired people in conducting daily financial operations.</p><p>Motivated by this fact, the work concentrates on assisting the visually impaired to distinguish among Iraqi banknotes. In essence, we employ computer vision in conjunction with Deep Learning algorithms to build a multiclass classification model for classifying the banknotes.</p><p>This system will produce specific vocal commands that are equivalent to the categorized banknote image, and then inform the visually impaired people of the denomination of each banknote. To classify the Iraqi banknotes, it is important to know that they have two sides: the Arabic side and the English side.</p></div>

- Hassan M.F.
- Abid A.
- Kamal A.
- Safdar S.
- Akber R.

Abstract

Opinion Mining from user reviews is an emerging field. Sentiment Analysis of Natural Language helps us in finding the opinion of the customers.

These reviews can be in any language e.g. English, Chinese, Arabic, Japanese, Urdu, and Hindi. This research presents a model to classify the polarity of the review(s) in Roman Urdu (reviews).

For the purpose, raw data was scraped from the reviews of 20 songs from Indo-Pak Music Industry. In this research a new dataset of 24000 reviews of Roman Urdu is created.

Nine Machine Learning algorithms - Naïve Bayes, Support Vector Machine, Logistic Regression, K-Nearest Neighbors, Artificial Neural Networks, Convolutional Neural Network, Recurrent Neural Networks, ID3 and Gradient Boost Tree, are attempted. Logistic Regression outperformed the rest, based on testing and cross validation accuracies that are 92.25% and 91.47% respectively.

Blockchain Evaluation Framework For Supply Chain Management: A Decision-Making Approach

Authors

- Alawi B.
- Al Mubarak M.M.S.
- Hamdan A.

Abstract

The purpose of this research is to evaluate the application of Blockchain technology for Supply Chain Management.

The research approach includes a Multi-Criteria Decision-Making framework based on Fuzzy Analytical Hierarchy Process. The framework analyses a set of Blockchain implementation criteria and their importance ranking for achieving Supply Chain Management.

The findings suggest that, to implement Blockchain technology for Supply Chain Management, the most important criterion is Traceability followed by Security and Smart Contact.

Decision makers can make use of the developed framework in the supply chain section to evaluate readiness of Blockchain technology and its benefits for Supply Chain frameworks.

This will lead to effective allocations for resources and budgets in their planning for various Blockchain deployment.

Factor Affecting Environmental Enforcement Effectiveness: A Critical Review

Authors

- Al-Qassim M
- Chen W.
- Al-Sartawi A.

Abstract

The study aims to review the existing challenges and shortcoming of environmental compliance and enforcement systems and identify the factors hindering their effectiveness.

Various factors were identified from the literature that hinder the effectiveness of environmental compliance and enforcement systems. The weak institutional capacity and commitment, lack of clear authority, inadequate collaboration and coordination including civic engagement, weakened understanding of environmental laws and regulations.

Some of the previously identified factors affecting the effectiveness of environmental compliance and enforcement systems were either incorporated in the 5 discussed issues or excluded from the discussion.

Crowdsourced Technology As A Collaborative Tool For Environmental Enforcement: A Critical Review Of Current Applications

Authors

- Al-Qassim M.
- Chen W.
- Al-Sartawi A.

Abstract

The systems in which law enforcement systems operate undergoing constant changes, such as the increase in demands for effectiveness which has led to the appreciation of IT as innovative, effective, and crucial addition to the law enforcement system.

The study aims to review the existing crowdsourced technology in environmental compliance and enforcement and other relevant fields. The study recommended that the Future research is required to further understand and explore the potential and efficiency of crowdsourced application in environmental enforcement.

Blockchain In Environmental Compliance And Enforcement

Authors

- Al-Qassim M.
- Chen W.
- Al-Sartawi A.

Abstract

The blockchain applications are a relatively new innovation, especially in the field of envirinmental law enforcement.

The review of the existing literature on blockchain applications seems to point out the availability of great potential for these application in the field of environmental compliance and enforcement.

The study aims to review the existing blockchain technologies in environmental compliance and enforcement and other relevant fields.

The study recommend that Future research is required to further investigate the potential and impact of blockchain application on environmental enforcement.

Digital Innovation In The Fourth Industrial Revolution Era

Authors

- Altaei S.
- Al-Roubaie A.
- Alkhaldi F.K.

Abstract

At present, competition and competitiveness have become progressively imperative for all countries around the world.

Competitiveness is vital to top management in government and private sectors and can found through plans, policies, approaches, measurement indicators, and statements.

The study highlights the concept of innovation as a main pillar of knowledge-based economy in the renaissance and competitiveness.

Therefore, the importance of this study is to explain how innovation contributes to the transformation into a knowledge-based economy, and how innovation is supporting the technology and boosting artificial intelligence.

The study is a literature review in nature and indicates that training and education are the most proper way to enhance the level of investment in ICT.

Gender Diversity On Corporate Boards And Earnings Management: A Review

Authors

- Sanad Z.
- Shiwakoti R.
- Al-Sartawi A.

Abstract

An increasing number of researchers were motivated by the enormous actions toward increasing the representation of women on corporate boards to test the relationship between gender diversity and Earnings management as it is considered a major ethical and risky dilemma.

However, due to the inconclusive findings of the extant literature, the impact of gender diversity on earnings management is still vague.

The aim of this paper is to critically review the previous studies that tested the relationship between female directors and different earnings management practices (accrual-based, real activities and classification shifting).

Besides, the study highlights the gaps in the literature and suggests future studies.

Information Technology Governance And Online Banking In Bahrain

Authors

- Al-Okaily M.
- Al-Sartawi A.
- Hannon A.
- Khalid A.A.

Abstract

The aim of current study is to investigate the impact of information technology governance on the online banking used by Bharani banks during 2020.

The results indicates that the total level of applying online banking was 87% and the information technology was 82% and there is a significant and positive relationship between both.

The study recommended that the banks must incorporate more online services and use the financial technology which can be considered as an advanced model of online banking.

Financial Technology: Literature Review Paper

Authors

- Al-Sartawi A.
- Al-Okaily M.
- Hannoon A.
- Khalid A.A.

Abstract

The demand for financial technologies has increased in the last few years. The most impacted sectors are the financial institutions, which are leading the trend.

However, due to not using financial data in most of the previous literature still, we are not sure enough about how financial technology will reshape and improve the performance of financial institutions.

The aim of this paper is to critically review the previous studies that discussed financial technology. Besides, the study highlights the gaps in the literature and suggests future studies.

The Digital Economy: Challenges And Opportunities For Economic Conversion In The Gulf Countries

Authors

- Al-Roubaie A.

Abstract

Digital technologies increase the ability of the economy to absorb and adapt the existing knowledge elsewhere for building indigenous capacity for development.

Not only external markets enable countries to improve entrepreneurial capabilities and increase production linkages, but also facilitate inflows of foreign direct investment and encourage local firms to participate in the global value chains.

Narrowing the digital divide becomes essential for joining the digital economy and benefiting from the new opportunities offered by the Fourth Industrial Revolution.

Human capabilities contribute to decision making by providing more choices to select among alternative development projects. Digital technologies are enablers for rapid technological change and economic conversion.

How The Innovation Performance In Gcc Heis Is Affected By The Knowledge Management In The Era Of Knowledge Economy

Authors

- Reyad S
- Madbouly A.

Abstract

In the knowledge economy era, Higher Education Institutions (HEIs) plays a vital role in the nation’s sustainable development through innovation. Knowledge Management (KM) is one of most critical determinants for the overall performance of the Higher Education Institutions (HEIs) and specially to their innovation performance.

The purpose of this study is to analyse the impact of different processes of KM on the Innovation Performance (IP) of the GCC HEIs. It was found that the highest implemented process of KM in GCC HEIs is Knowledge Sharing (KS) and the reward performance in GCC HEIs is the highest among all other pillars of the IP.

Factors which significantly impact the IPs are: exchange of ideas and knowledge; creating new knowledge from existing knowledge; the respond to employees’ ideas; having mechanisms in place to capture knowledge from stakeholders were significant; encouragement for participation in informal discussions to share knowledge; use of latest files sharing systems to share knowledge efficiently; implementation of mechanisms that match sources of knowledge to problems and employees’ encouragement to apply their knowledge to solve problems.

The Use Of Artificial Intelligence In The Field Of Electronic Commerce

Authors

- Hassan A.
- Abdulkhaleq N.M.S.

Abstract

The study aimed to identify the use of artificial intelligence applications, and their use to classify and analyze data, add a personal character to the way goods and services are presented in proportion to the users’ desires, in addition to extracting and analyzing user reactions about goods and services, carrying out the inventory and planning process, and others.

The study also shed light on the advantages of using artificial intelligence applications, including the possibility of dispensing with routine work, obtaining information and results for analysis in record time, and helping to make marketing and strategic decisions.

The Role Of Interactivity In Social Commerce Websites: A Content Analysis Study

Authors

- Almahdi M.H.
- Archer-Brown C.

Abstract

This paper contributes to bridging an important gap in the interactivity literature. The gap is manifested in the incongruities in reporting the relationship between the interactivity levels on web platforms and relevant outcome variables. Indeed, researchers are contested on whether more interactivity leads to positive or negative customer experiences online.

To bridge this gap, the researchers investigate the interactivity of social commerce websites, as they are deemed an appropriate context for this study. Indeed, social commerce platforms are noted for being built on novel and highly engaging interactive features, and hence are more likely to result on positive customer experiences.

To achieve the study’s aim, the researchers conduct a content analysis of 73 social commerce websites, noting the existence or lack of interactivity features in each of them. They, then, link the results from the content analysis to web analytics acquired through desk research. The findings show that both dimensions of interactivity (i.e., human-to-website and human-to-human interactivity) result on more social commerce effectiveness. Still, the effect of the less widespread human-to-human interactivity features is stronger and more significant than that of the more ubiquitous human-to-website interactivity features.

The study’s results highlight the importance of continuing to investigate interactivity in more novel and engaging contexts.

Abstract

The purpose of the paper is to provide a structure overview of literature for digitalization in the managerial accounting. This can serve as a basis for future research, and thus provide a framework for furthermore focused research questions. Papers published in prominent accounting journals during a 14-year period were scanned.

These papers pertaining to the field of digitalization in the managerial accounting were categorized and analyzed in more detail and classified in accordance with selected dimensions. The review was focused on papers explicitly exploring the link between accounting and technology.

This paper focused on the field of management accounting and its evolving nature in the fastmoving digital world. This literature review aims to shed light on the effects of digitalization on the well-established filed of management accounting.

The Impact Of Digitalization On Managerial Accounting Roles

Authors

- Munfaredi A.
- Sulaiman N.
- AlKhatib R.
- Wadi R.A.

Abstract

This paper discusses the impact of digitalization on the role of managerial accounting and examines various factors that affect the accounting sector. These factors have led to many changes in the accounting process and decision-making in management accounting.

The introduction of digitalization and the use of technological solutions have created some gaps when the new digital methods were adopted on the old management accounting methods.

The accounting sectors should implement new business models and strategies to adapt to the new culture introduced by the companies and enter the digital age. The research methodology will revolve around completing a literature review and evaluating previous research in similar fields and situations. As accounting methods begin to develop in a technology-led era, management accounting must also adapt, and the digital process is no exception.

In this case, the organizations will need to learn to make certain changes to its company culture. Hence, this will also affect the way managerial accountants approach their employees in terms of daily work getting handled. The digitalization process will require the entire accounting process to be adapted, changed, and gradually transformed.

Many people claim that digitalization will replace the outdated methods used by many companies. Following the right approach and practices may lead to the development of firms.

The Impact Of Fintech Phenomenon On Economic Development: The Case Of Bahrain

Authors

- Shaikh Z.
- Wadi R.A.
- AlMahari E.

Abstract

This study illustrates the progress financial technology made in the recent years in terms of digital payments in Bahrain. It emphasises on the roles of Bahrain FinTech Bay and Central Bank of Bahrain in terms of regulations, operations and monitoring the establishment cycle of electronic payment systems.

This study examines the impact of the newly electronic payment systems on Bahrain economy development due to the high demand for digital payment options and transferring into a cashless society, and the fast continuous growth of the financial technology services.

The findings indicates that digital payment systems have impact on Bahrain social welfare and overall economic development.

E-Learning: Is The End Of Classic Education?

Authors

- Mseer I.N.

Abstract

Until recently, saw the discussion of e-learning as inferior to classical education, where the university campus with all its holiness, and reverence, in addition to the university traditions, which represent the life of academic work, and the concern for the unique imprint,

Distinguish this university from that until the Covid-fig9 pandemic came, to change the picture and turn the equation as global changes imposed resorting to the electronic platform as a rescue vessel for the critical situation experienced by universities in light of the policy of social distancing and isolation set by the epidemic.

Thus, all universities hastened to mobilize efforts to prepare plans and practices that facilitate the work of distance education, which means relying on e-learning, with all the details that it is based on. Where the electronic platform and other technical accessories, including programs, devices, and electronic infrastructure.

Simultaneously, the essential thing in all of this remains the communication method between the academic and administrative staff in universities and the students' response in communicating with the new experience, with the disclosure of the profit and loss account in all this.

Social Media As An Effective Tool For Health Communication: Insights From The COVID-19 Pandemic

Authors

- Almahdi M.H.
- Raees B.S.

Abstract

Health communication efforts are crucial in improving the public's well-being and quality of life. Consequently, health organizations are constantly seeking out more effective and interactive channels to deliver health communication messages to their intended audiences.

One of such channels is social media, which has been noted to facilitate the interaction between health organizations and their consumers. Based on a study of the literature, this paper discusses the use of social media as an effective tool for spreading health communication messages.

It further highlights the opportunities and challenges facing health organizations when using social media as a tool for health communication. The researchers present the COVID-19 pandemic as a case to illustrate the major role of social media in health communication, while shedding light on how fake news can impede such important efforts.

The Usage Of Artificial Intelligence In Arab Financial Institutions

Authors

- Hassan A.

Abstract

The global banking sector has undergone a radical transformation as a result of the implications of the rapid digital development imposed by the twenty-first century.

Artificial intelligence is emerging as one of the most effective technologies that have a strong and tangible impact that will make a comprehensive change in the global business environment.

The Study revealed that the Arab world is witnessing a major shift towards digital banks in the coming years in the Arab markets, especially the Gulf, with the world’s tendency towards artificial intelligence, which may open the door for the disappearance of traditional banks, especially since digital transformation will reduce spending by reducing traditional bank branches.

Ethical Concerns In Artificial Intelligence (Ai): The Role Of Regtech And Islamic Finance

Authors

- Rabbani M.R.
- Sarea A.
- Khan S.
- Abdullah Y.

Abstract

Artificial Intelligence (AI) is being applied across all areas of business and society. It is also one of the most researched topics during the current period.

Banks and financial institutions nowadays are collecting large amounts of customer information which are imposed with AI and machine learning; however, the succeeding of all information remains unknown.

This study attempts to identify the ethical issues in the application of Artificial intelligence and offers remedies from the Shariah principles. It also examines the role of Regulation technology (RegTech) in Islamic financial institutions.

This study is exploratory in nature and used mainly primary data for the analysis purpose. The primary data is collected through the structured questionnaire obtained from the sharia scholars living in Gulf Cooperation Council (GCC) countries.

The findings of the study suggest that the there is a significant relationship between ethical issues in AI implementation, role of RegTech and Islamic finance.

The findings also suggest that the effective and intelligent utilization of RegTech and Islamic finance tools can reduce the ethical concern related to the AI implementation.

Increasing Female Participation On Boards: Effects On Sustainability Reporting

Authors <ul style="list-style-type: none">Buallay A.Hamdan R.Barone E.Hamdan A.	Abstract <p>Utilizing data on 2,116 stock-exchange-listed banks over a 10-year period (2007–2016), this study examines the relationship between board gender diversity and sustainable reporting.</p> <p>Findings from descriptive analysis show that board diversity tends to be higher with banks endowed with low financial leverage and high assets. Cross-country analysis shows that Central America evinces the highest levels of board diversity among banks.</p> <p>In Europe, however, repose the highest levels of environmental and social disclosure among banks. In contrast, the highest level of governance disclosure among banks obtains in Australia.</p> <p>A regression model partially corroborates the gender board diversity as a causal factor of the corporate governance disclosure inasmuch as, when female board members account for 22–50% of the board, a positive significant effect on the level of ESG disclosure results.</p> <p>However, at levels above 50%, negative returns to scale manifest on ESG disclosure from female board participation. Given the effect on the latter on the former uncovered by this research, regulators ought to mandate quotas of female participation on bank boards to engender sustainable increases in the level of ESG reporting on the part of banks.</p> <p>© 2020 The Authors. Reporting Inpatients’ Experiences And Satisfaction In A National Psychiatric Facility: A Study Based On The Random Forest Algorithm

Authors

- Fardan H.
- Jahrami H.

Abstract

Understanding psychiatric inpatients’ experiences is important to establish a culture of patient-centric care and promote trust in healthcare.

This study aimed to evaluate nine dimensions of patients’ experiences and investigate their association with patient satisfaction, revisit intention, and positive word-of-mouth (WoM) recommendation. Cross-sectional questionnaire data from five years of surveying (2016–2020) in the main psychiatric hospital in Bahrain were statistically analyzed, involving 763 psychiatric inpatients with an overall 65.6 ± 17.2 length of stay (days).

The findings show that across the five years 2016–2020, the overall reported satisfaction was “very high” (4.75 ± 0.44) with no significant differences between these five years (F [4, 758] = 0.66, p = 0.620). The experience of confidentiality received the highest rating (4.72 ± 0.45).

The experiences of ease of access, hospitality quality, and quality of responsiveness to one’s needs significantly correlated with revisit intention (p < 0.05). Patients with high satisfaction had greater potential for revisit intention (r [761] = 0.08, p = 0.027), which was associated with WoM recommendation (r [761] = 0.08, p = 0.033).

Overall, men were less likely than women to experience convenient access to psychiatric wards.

Customer Churn Prediction In Telecommunication Industry Using Deep Learning

Authors

- Fujo S.W.
- Subramanian S.
- Khder M.A.

Abstract

Without proper analysis and forecasting, industries will find themselves repeatedly churning customers, which the telecom industry in particular cannot afford. A predictable model for customers will allow companies to retain current customers and to obtain new ones.

Deep-BP-ANN implemented in this study using two feature selection methods, Variance Thresholding and Lasso Regression, in addition, our model strengthened by early stopping technique to stop training at right time and prevent overfitting. We compared the efficiency of minimizing overfitting between dropout and activity regularization strategies for two real datasets: IBM Telco and Cell2cell. Different evaluation approaches used: Holdout, and 10-fold cross-validation to evaluate the model’s efficiency.

To solve unbalanced issue, the Random Oversampling technique was used to balance both datasets. The results show that the model implemented performs well with lasso regression for feature selection, early stopping technique to pick the epochs, and large numbers of neurons (250) into the input and hidden layers, and activity regularization to minimize overfitting for both datasets.

In predicting customer churn, our findings outperform ML techniques: XG_Boost, Logistic.

The Applications Of Artificial Intelligence To Control COVID-19

Authors

- AL-Hashimi M.
- Hamdan A.

Abstract

The usability of AI technology has often been underestimated before the spread of COVID-19. AI serves as the most appropriate tool in predicting and controlling the spread of the pandemic.

The use of AI technologies such as; Machine Learning, Computer Vision applications, and Natural Language Processing (NLP), which uses big data applications, is critical under the spread of COVID-19.

BlueDot is an organization that uses AI technology to track and identify the spread of the virus quicker than any other organization. The usability of deep learning models is another example that helps find the minute details that are often unnoticed through the naked eye.

Notably, the model is effective as it provides rapid analysis of many chest X-rays, which is generally time-consuming when done by healthcare experts. Upon the literature reviews, it can be concluded presently, AI plays a landmark role in controlling the spread of the virus.

This chapter will elaborate on numerous technologies of artificial intelligence used in the fight of coronavirus COVID-19 in terms of their applications, impact, and future implications.

The Dark Side Of Social Media: Spreading Misleading Information During COVID-19 Crisis

Authors

- AI Shehab N.A.

Abstract

The Internet has heralded a new era of information technology and facilitated communication through different platforms. Several governments, organizations, and individuals recognize that social media has yielded significant advantages to their practices and easily delivers their messages.

For the first time in their history, some governments and businesses offer jobs related to the social media landscape, such as Social Media Specialist, due to the technological and information revolution.

Certainly, social media enables its users to distribute information and reach a mass audience irrespective of their geographic and demographic boundaries. Therefore, social media could breed new challenges when misused and exploited in dispensing rumors and misleading facts to the public, especially in crises.

This chapter aims to underscore social media’s existence and how it paves the way to smooth the flow of information and communication worldwide. By employing social media tools in their practices, both governments and businesses witness exceptional outcomes and acknowledge that social media laid the foundation for more effective communication.

This chapter will also highlight social media’s disadvantages in increasing false information and inadequate facts that drive more uncertainty, sadness, anger, and lack of confidence among the public.

It will also address the concept of crisis in general and focus on crisis management and crisis communication. Moreover, some countries will clarify the actions relevant to information filtering via prohibiting some popular websites and social media platforms.

Furthermore, it will identify how governments and businesses deal with rumors in crisis, for example, COVID-19 outbreak, wars, financial scandals, business interruptions, and the like.

Finally, the chapter will deliver the best practices that manage and control the fake information in social media and determine the best ways to spread accurate, reliable, and sufficient facts.

Effective Intrusion Detection System To Secure Data In Cloud Using Machine Learning

Authors

- Aldallal A.
- Alisa F.

Abstract

When adopting cloud computing, cybersecurity needs to be applied to detect and protect against malicious intruders to improve the organization's capability against cyberattacks.

Having network intrusion detection with zero false alarm is a challenge. This is due to the asymmetry between informative features and irrelevant and redundant features of the dataset.

In this work, a novel machine learning based hybrid intrusion detection system is proposed. It combined support vector machine (SVM) and genetic algorithm (GA) methodologies with an innovative fitness function developed to evaluate system accuracy.

This system was examined using the CICIDS2017 dataset, which contains normal and most up-to-date common attacks. Both algorithms, GA and SVM, were executed in parallel to achieve two optimal objectives simultaneously: obtaining the best subset of features with maximum accuracy.

In this scenario, an SVM was employed using different values of hyperparameters of the kernel function, gamma, and degree. The results were benchmarked with KDD CUP 99 and NSL-KDD.

The results showed that the proposed model remarkably outperformed these benchmarks by up to 5.74%. This system will be effective in cloud computing, as it is expected to provide a high level of symmetry between information security and detection of attacks and malicious intrusion.

The Impact Of Self-Efficacy On Feelings And Task Performance Of Academic And Teaching Staff In Bahrain During Covid-19: Analysis By Sem And Ann

Authors

- Taufiq-Hail G.A.-M.
- Sarea A.
- Hawalдар I.T.

Abstract

COVID-19 has changed the way we live, communicate and work, as well as altering our feelings.

The higher education sector, alongside other sectors, has been severely affected by the pandemic and its serious repercussions. Academic and teaching staff have had to work from home and convert to online teaching, a change which has been met with both negative and positive feelings.

The need for new competencies and upskilling, among other challenges, has been encountered. Therefore, the objectives of this study are aligned with exploring the impact of three constructs—self-efficacy, positive feelings and negative feelings—on the performance of academic and teaching staff at public and private universities in Bahrain during the COVID-19 lockdown.

Additionally, the impact of self-efficacy on these feelings was explored. A cross-sectional quantitative survey instrument was developed, validated and distributed using 83 valid responses. A two-way approach was followed to evaluate the model using the partial least squares (PLS-SEM) and multi-layer perceptron-artificial neural network (MLP-ANN) techniques.

Tests support the validity, reliability and consistency of the measurement scale, as well as the validity of the postulated model. The results revealed a statistically significant relationship between the three constructs and performance. Interestingly, attention is drawn to the impact of self-efficacy on increasing positive feelings and task performance.

The impact of self-efficacy on reducing negative feelings is also evident. Analyses of PLS-SEM augmented by MLP-ANN enhanced our understanding of the relationships and gave more support to the use of dual approach analyses in future research. This research adds to COVID-19 global research and the findings increase the knowledge within the literature.

The implications of the study’s outcomes should be given attention from higher education authorities and management to raise staff morale and offer training to help sustain performance and mental wellbeing.

Lastly, limitations and future directions are discussed.

Sustainability Reporting In Smart Cities: A Multidimensional Performance Measures

Authors

- Buallay A.
- El Khoury R.
- Hamdan A.

Abstract

This study investigates the relationship between the level of sustainability reporting and firm’s performance (operational, financial and market) in the top worldwide 20 smart cities.

Using data culled from 3536 observations from 20 different smart cities for ten years (2008–2017), an independent variable derived from ESG score are regressed against dependent manufacture performance indicator variables [Return on Assets (ROA), Return on Equity (ROE) and Tobin’s Q (TQ)].

Two types of control variables complete the regression analysis in this study: firm-specific and macroeconomic. The findings elicited from the empirical results demonstrate that there is a positive significant relationship between ESG and operational performance (ROA), financial performance (ROE).

However, there is a negative significant relationship between ESG and market performance (TQ). The model in this study presents a valuable analytical framework for exploring sustainability reporting as driver of performance in firms in different smart cities.

Improving Firm’s Economic And Environmental Performance Through The Sustainable And Innovative Environment: Evidence From An Emerging Economy

Authors

Abstract

Businesses in the present era are dealing with a complex and unprecedented brew of social, environmental, and technological trends. This requires sophisticated, sustainability-based management. Yet organizations are often reluctant to place sustainability core to their business strategies with the mistaken belief that the costs associated with environmental investments outweigh the benefits.

The Global Climate Risk Index has placed Pakistan on 5th position in the list of nations, most susceptible to climate change in its recent report. Pakistan lost the lives of 9,989 people, incurred economic losses of \$ 3.8 billion, and faced 152 shocking climates between 1999 and 2018. Based on this information, it is established that Pakistan’s susceptibility to climate change is growing unprecedentedly and industrial pollution is one of the biggest contributors in this respect.

The country needs to take emergency measures to address this issue. With this background, the present study aims to investigate the impact of environmental sustainability on environmental and economic performance (EP) with the mediating effect of environmental innovation.

Integrated Reporting And Performance: A Cross-Country Comparison Of Gcc Islamic And Conventional Banks

Authors

- Buallay A.
- Al Hawaj A.A.
- Hamdan A.

Abstract

Purpose: In the Gulf Cooperative Council (GCC) countries, the integrated reporting (IR) concept has attracted considerable attention from banks. In as much as IR is not a legal requirement anywhere in the GCC, however, the incidence of disclosure by banks across the GCC varies considerably and asymmetries exist in the content of disclosure released by banks within, as well as across, these jurisdictions. This study aims to examine the relationship between IR disclosure and financial, operational and market performance in both Islamic and conventional banks.

Design/methodology/approach: This study examines five years (2012-2016) of IR from 59 banks in GCC countries with 295 observations. The integrated report index (IRI), as the independent variable, is regressed separately against three performance indicators [return on assets, return on equity and Tobin’s Q (TQ)] as dependent variables. In addition, the following two types of control variables are inserted in the regression equations in this study: macroeconomic (two indicators) and bank characteristics (three indicators).

Findings: The findings elicited from the empirical results demonstrate that, on the one hand, IR in conventional banks positively affects market performance, while negatively affecting operational and financial performance. On the other hand, the results for Islamic banks show that IR negatively affects market performance, with no discernible effect on neither financial nor operational performance. In the GCC banking sector, for the most, empirical results conflict with expectations implied by signaling theory and capital need theory. From this study, evidence suggests that GCC bank performance would not improve were IR disclosure rendered mandatory. However, that conclusion is stronger with respect to Islamic than with respect to conventional banks in the region.

Originality/value: The study provides insights into the effect of voluntary disclosure of IR as gauged by various measures of performance across Islamic and conventional banks located in a range of GCC countries. This study accordingly provides perspective on the extent to which IR can and does play a role in contributing to bank performance.

On The Joint Distribution Of Two Continuous Independent Random Variables

Authors

- Al-Shoqran M.Y.

Abstract

In this paper, we propose a novel special distribution.

The proposed distribution is developed by analyzing the Joint distribution of two continuous independent random variables under some mathematical operations. One of these variables belongs to Chi-square distribution.

The second variable belongs to the exponential distribution. The proposed method is based on the Change of variables and distribution function methods.

One of main result of this analysis shows that the distribution of sum of these two variables is an exponential distribution.

The graphs of the joint distribution function and various cases studies are discussed in detail.

Effective Intrusion Detection System To Secure Data In Cloud Using Machine Learning

Authors

- Aldallal A.
- Alisa F.

Abstract

When adopting cloud computing, cybersecurity needs to be applied to detect and protect against malicious intruders to improve the organization's capability against cyberattacks. Having network intrusion detection with zero false alarm is a challenge. This is due to the asymmetry between informative features and irrelevant and redundant features of the dataset. In this work, a novel machine learning based hybrid intrusion detection system is proposed.

It combined support vector machine (SVM) and genetic algorithm (GA) methodologies with an innovative fitness function developed to evaluate system accuracy. This system was examined using the CICIDS2017 dataset, which contains normal and most up-to-date common attacks. Both algorithms, GA and SVM, were executed in parallel to achieve two optimal objectives simultaneously: obtaining the best subset of features with maximum accuracy.

In this scenario, an SVM was employed using different values of hyperparameters of the kernel function, gamma, and degree. The results were benchmarked with KDD CUP 99 and NSL-KDD. The results showed that the proposed model remarkably outperformed these benchmarks by up to 5.74%. This system will be effective in cloud computing, as it is expected to provide a high level of symmetry between information security and detection of attacks and malicious intrusion.

The Impact Of Self-Efficacy On Feelings And Task Performance Of Academic And Teaching Staff In Bahrain During COVID-19: Analysis By Sem And Ann

Authors

- Taufiq-Hail G.A.-M.
- Sarea A.
- Hawalдар I.T.

Abstract

COVID-19 has changed the way we live, communicate and work, as well as altering our feelings.

The higher education sector, alongside other sectors, has been severely affected by the pandemic and its serious repercussions. Academic and teaching staff have had to work from home and convert to online teaching, a change which has been met with both negative and positive feelings.

The need for new competencies and upskilling, among other challenges, has been encountered. Therefore, the objectives of this study are aligned with exploring the impact of three constructs—self-efficacy, positive feelings and negative feelings—on the performance of academic and teaching staff at public and private universities in Bahrain during the COVID-19 lockdown.

Additionally, the impact of self-efficacy on these feelings was explored. A cross-sectional quantitative survey instrument was developed, validated and distributed using 83 valid responses. A two-way approach was followed to evaluate the model using the partial least squares (PLS-SEM) and multi-layer perceptron-artificial neural network (MLP-ANN) techniques.

Tests support the validity, reliability and consistency of the measurement scale, as well as the validity of the postulated model. The results revealed a statistically significant relationship between the three constructs and performance. Interestingly, attention is drawn to the impact of self-efficacy on increasing positive feelings and task performance. The impact of self-efficacy on reducing negative feelings is also evident.

Analyses of PLS-SEM augmented by MLP-ANN enhanced our understanding of the relationships and gave more support to the use of dual approach analyses in future research. This research adds to COVID-19 global research and the findings increase the knowledge within the literature.

The implications of the study’s outcomes should be given attention from higher education authorities and management to raise staff morale and offer training to help sustain performance and mental wellbeing. Lastly, limitations and future directions are discussed.

Sustainability Reporting In Smart Cities: A Multidimensional Performance Measures

Authors

- Buallay A.
- El Khoury R.
- Hamdan A.

Abstract

This study investigates the relationship between the level of sustainability reporting and firm’s performance (operational, financial and market) in the top worldwide 20 smart cities.

Using data culled from 3536 observations from 20 different smart cities for ten years (2008–2017), an independent variable derived from ESG score are regressed against dependent manufacture performance indicator variables [Return on Assets (ROA), Return on Equity (ROE) and Tobin’s Q (TQ)].

Two types of control variables complete the regression analysis in this study: firm-specific and macroeconomic.

The findings elicited from the empirical results demonstrate that there is a positive significant relationship between ESG and operational performance (ROA), financial performance (ROE).

However, there is a negative significant relationship between ESG and market performance (TQ). The model in this study presents a valuable analytical framework for exploring sustainability reporting as driver of performance in firms in different smart cities.

Towards Explaining Knowledge Hiding Through Relationship Conflict, Frustration, And Irritability: The Case Of Public Sector Teaching Hospitals

Abstract

Organizations grow and excel with knowledge sharing; on the other hand, knowledge hiding is a negative behavior that impedes innovation, growth, problem solving, and timely correct decision making in organizations.

It becomes more critical in the case of teaching hospitals, where, besides patient care, medical students are taught and trained. We assume that negative emotions lead employees to hide explicit knowledge, and in the same vein, this study has attempted to explain the hiding of explicit knowledge in the presence of relational conflicts, frustration, and irritability.

We collected data from 290 employees of a public sector healthcare organization on adopted scales to test conjectured relationships among selected variables. Statistical treatments were applied to determine the quality of the data and inferential statistics were used to test hypotheses.

The findings reveal that relationship conflicts positively affect knowledge hiding, and frustration partially mediates the relationship between relationship conflicts and knowledge hiding.

Towards Making An Invisible Diversity Visible: A Study Of Socially Structured Barriers For Purple Collar Employees In The Workplace

Abstract

Eunuchs and members of the transgender community are yet to be recognized as an effective human resource and this diversity in the workforce is still invisible.

A tiny portion of the transgender community is employed, and they are tagged as purple collar employees. It is generally claimed that coworkers do not accept members of the transgender community in the workplace and are not willing to work with them due to their different personal, social, and work-related characteristics.

This study aimed to investigate coworkers’ attitudes towards transgender colleagues and their willingness to work with them in the workplace. We selected the Punjab province of Pakistan as the context for the study where more than five hundred thousand members of the transgender community live.

We collected data from 363 randomly selected respondents working in an organization where transgender people also worked. We applied Structural Equation Modeling (SEM) to analyze the data.

Our findings revealed that coworkers do not hesitate to work with transgender people merely based on their biological differences. Coworkers’ willingness was more influenced by social attributes (trust and support) and work attributes (knowledge, ability, and motivation) irrespective of gender differences.

Contactless Core-Temperature Monitoring By Infrared Thermal Sensor Using Mean Absolute Error Analysis

Authors

- Shareef B.T.
- Saeed M.G.
- Yasen K.N.

Abstract

Aims and Objectives: Usually, the increase in temperature of an individual indicates the possibility of being infected with a disease that might be risky to other people, such as coronavirus. Traditional techniques for monitoring body core-temperature require body contact either by oral, rectum, axillary, or tympanic means, which are unfortunately considered intrusive in nature as well as causes of contagion. Therefore, sensing human core-temperature non-intrusively and remotely is the objective of this research.

Background: Nowadays, increasing the level of medical sectors is a necessary target for research operations, especially the development of integrated circuits, sensors, and cameras, to make life easier.

Methods: The solution is proposed as an embedded system consisting of the Arduino microcontroller, which is trained with a model of Mean Absolute Error (MAE) analysis for predicting Contactless Core-Temperature (CCT), which is the actual body temperature.

Results: The Arduino microcontroller was connected to an Infrared-Thermal sensor named MLX90614 as an input signal and was connected to the LCD to display the CCT. To evaluate the proposed system, experiments were conducted on 31 subjects, and contactless temperature from the three face sub-regions was sensed, including forehead, nose, and cheek.

The Relationship Between Premenstrual Syndrome And The Quality Of Sleep Among Egyptian Women: An Observational Study

<div>Authors</div> <div><div><ul style="list-style-type: none">Kamel D.M.Tantawy S.A.Alsayed N.Bekhet A.H.Elbkery N.Khairy A.</div></div>	<div>Abstract</div> <div><p>Premenstrual syndrome (PMS) is a disorder characterized by physical, psychological and behavioural symptoms. These symptoms can affect the women s quality of life on different aspects.</p><p>The objective of the study was to investigate the relationship between PMS and sleep quality among women of reproductive age. Materials and methods. This is a cross sectional study on 768 women of reproductive age, who answered a self-reported questionnaire. This questionnaire consisted of three parts: demographic data sheet, premenstrual syndrome scale (PMSS) and Pittsburg Sleep Quality Index (PSQI).</p><p>The primary outcome was the prevalence and severity of PMS and sleep quality, in addition to the correlation between PMS and PSQI. The demographic characteristics of participants and their impact on the PMS and PSQI were secondary outcomes.</p><p>Results. PMS was reported in 90.5% of participants, with intensity ranging between moderate to very severe. There was a significant positive correlation between PMS and PSQI (p< 0.01). PMS did not show any correlation (P> 0.05) with the demographic characteristics, while the age and body weight only showed significant difference with reference to PSQI.</p><p>Conclusion. The correlation between PMS and PSQI is significant and should be investigated in women with PMS, to develop a coping strategy regarding the sleep quality. © 2021 Balkan Medical Union. Adaptive Security Architectural Model For Protecting Identity Federation In Service Oriented Computing

Authors

- Beer Mohamed M.I.
- Hassan M.F.
- Safdar S.
- Saleem M.Q.

Abstract

With the tremendous growth of Internet and its related technologies, the Service Oriented Architecture (SOA) became a dominant paradigm shift for enterprise computing.

In SOA, business functionalities are offered by many different Service Providers as services. In order to get served by different service providers, the client has to authenticate with those service providers at multiple times.

Single Sign On (SSO) mechanism provides the client to login only one time so that access to different services is made possible without needing to re-authenticate. Here, the identity of the logged-in client is federated among the enterprise computing nodes.

This is one of the simplest forms of federated identity. The goal of identity federation is to benefit ease of use, flexibility, productivity and reduced cost of the authentication process, but trust and security is a major concern in this situation.

Major threats on federated identity management are due to identity misuse, identity theft, and trust deficit between identity providers and services providers. As of now, the Security Assertion Markup Language (SAML), Open Authorization (OAuth) and OpenID are the three important federated identity management standards in the industry.

However, none of them is equipped by itself to provide comprehensive security protection for identity federation even within a single enterprise computing environment. In fact, these federated solutions result in additional security vulnerabilities due to their openness of identity federation.

The security threats are becoming severe when federated identity is spanned into the inter-organizational and intra-organizational computing environment. This paper analyses the vulnerabilities and security gaps in the existing federated identity solutions.

To overcome these gaps, an adaptive security architectural model is proposed for identity federation at inter and intra-organizational level using public key infrastructure that adheres to the SOA security standards and specifications. The proposed architecture is implemented and tested in a large-scale federated identity enterprise computing environment with security-centric financial data to acquire the desired results. A cross-sectional comparative analysis is done between existing and proposed solutions to validate the improvement in the protection of identity federation environment.

The Failure Of Corporate Governance At Infrastructure Leasing And Financial Services Limited: Lessons Learnt

Authors

- Kukreja G.
- Gupta S.
- Bhatia M.

Abstract

This case study investigates multiple issues related to corporate governance, regulations, auditing and financial reporting of Infrastructure Leasing and Financial Services Limited (IL&FS). Combinations of these issues resulted in default in payment obligations by IL&FS in August 2018 originated from the agency problem. It posed a substantial systematic risk to the whole financial system of India. This case study highlights the severe drawback of concentration of decision-making and unprofessional work ethics at the senior management level. Further, the case study also provides the opportunity to discuss the inappropriate regulations and governance practices which cause a severe problem in long-standing and prominent organizations like IL&FS. Research Questions: (a) Discuss the vital role of corporate governance in major corporations and the reasons behind governance failures. (b) How did asset-liability mismatch create liquidity problems in a company which deals with long-term projects? (c) How does lack of a proper and unified regulatory framework for Non-Banking Financial Corporation (NBFC) harm investors' interest? Link to Theory: This case study provides an opportunity to learn the role of corporate governance in NBFC. This case demonstrates the problems arisen because of agency problem and conflict of interest among real-world stakeholders. The case study also highlights the importance of assets-liabilities management in a strategically important organization like IL&FS. Phenomenon Studied: This case study attempts to understand the potential problems that occurred in IL&FS from the failure of good governance, lack of unified regulations for NBFCs and non-adherence of professional responsibilities by the external auditors. Case Context: The case study explores the vital role of the infrastructure development and financing companies in developing economies like India and how it may affect other vital entities of the financial system. Further, it demonstrates how unethical practices at senior management and lack of unified regulations can harm the organization. Findings: The research study found senior management's potential involvement in unethical practices while managing the company. The financial statements did not reflect the true and fair picture of the entity, which misled investors and other stakeholders. It created chaos in the stock market, resulting in a loss to shareholders. The government set up a new board to restore the confidence of the stock market. Further, the government started to address the problems that arose. Discussions: The case of IL&FS by default, at first glance, looks like a case of asset-liability mismatch due to the lack of supervisory roles of the board and senior management's massive regulatory failure. It is shocking how under the nose of regulators like Reserve Bank of India (RBI), Securities and Exchange Board of India (SEBI) and Ministry of Corporate Affairs (MCA) a default of this scale could take place. How could IL&FS group grow unchecked into a massive 348 entity. It appeared that regulators, marquee shareholders (banks and institutions), and the board of directors failed in their fiduciary obligation to regulate and supervise IL&FS. © 2021 SAGE Publications.

Independence And Effectiveness In Internal Shariah Audit With Insights Drawn From Islamic Agency Theory

<div>Authors</div> <div><div><ul style="list-style-type: none">Khalid A.A.Sarea A.M.</div></div>	<div>Abstract</div> <div><p>Purpose: This paper aims to examine bases of effectiveness in internal Shariah auditing undertaken in Islamic financial institutions (IFIs).</p><p>Design/methodology/approach: This paper is theoretical in approach taking, as its starting-point, an extensive literature review. From a general agency theory, an Islamic agency theory is articulated and then applied to ascertain attributes of internal Shariah audit effectiveness revolving around the concept of independence.</p><p>Findings: Effective internal Shariah auditing, as a mechanism of assuring Shariah compliance by IFIs, varies directly with the degree of independence enjoyed by internal Shariah auditors themselves. The research propounds that an articulated Islamic agency theory holds potential to serve as a theoretical foundation to build a multi-dimensional conceptual framework based on independence utile for evaluating internal Shariah audit effectiveness.</p><p>Research limitations/implications: Evidence is drawn strictly from secondary sources. Practical implications: To assure effectiveness of internal Shariah auditing, IFIs ought to increase the level of independence of internal Shariah auditors.</p></div>

Formal Institutions And The Development Of Entrepreneurial Activity – The Contingent Role Of Corruption In Emerging Economies

Authors <ul style="list-style-type: none">• Harraf A.• Ghura H.• Hamdan A.• Li X.	Abstract <p>Purpose: The paper aims to analyse the interplay between formal and informal institutions’ and their impact on entrepreneurship rates in emerging economies.</p> <p>Design/methodology/approach: This study expands previous research in examining the moderating effect of control of corruption on the relationship between formal institutions and the development of the entrepreneurial activity. The study utilizes longitudinal analyses of a dataset from 41 emerging economies over 11 years (2006–2016).</p> <p>Findings: Findings provided robust support for the study’s hypotheses. The results suggested lower levels of corruption positively moderate the effects of a country’s number of procedures and education and training on the rates of entrepreneurial activity, while negatively moderating the effects of firm-level technology absorption on the rates of entrepreneurial activity.</p> <p>Research limitations/implications: The study has considered only one particular aspect of high-growth entrepreneurship, which is newly registered firms with limited liability. Although newly registered firms are recognized as one of the critical drivers of entrepreneurial activity. Future research should seek to examine other aspects of growth-oriented entrepreneurship such as activities involving a high level of innovation, corporate entrepreneurship or technology developments.</p> <p>Practical implications: This study advanced the existing theories in the field of entrepreneurship and institutional economics as it merged the two theories as a driving framework in the design of the study in the context of emerging economies.</p> <p>Social implications: The study tested a theoretical model by expanding the number of emerging economies in the study and found comparable findings that explain factors that may influence the likelihood of individuals entering entrepreneurship.</p> <p>Originality/value: This article adds to the current literature as it highlights the importance of the interplay of formal and informal institutions in determining their impact on entrepreneurship rates in emerging economies. This is of particular importance to policy-makers, and the business world as the empirical results of this study show the benefits of control of corruption in boosting entrepreneurial rates in these economies, which strive for economic diversification in their developmental endeavours.</p> <p>© 2020, Emerald Publishing Limited.</p>

Information Management In The Early Stages Of The COVID-19 Pandemic

Authors <ul style="list-style-type: none">• Kosack E.• Stone M.• Sanders K.• Aravopoulou E.• Biron D.• Brodsky S.• Al Dhaen E.S.• Mahmoud M.• Usacheva A.	Abstract <p>Purpose: This paper aims to review the information management aspects of the early months of the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) coronavirus 19 outbreak. It shows that the transition from epidemic to the pandemic was caused partly by poor management of information that was publicly available in January 2020.</p> <p>Design/methodology/approach: The approach combines public domain epidemic data with economic, demographic, health, social and political data and investigates how information was managed by governments. It includes case studies of early-stage information management, from countries with high and low coronavirus disease 2019 impacts (as measured by deaths per million).</p> <p>Findings: The reasons why the information was not acted upon appropriately include “dark side” information behaviours (Stone et al., 2019). Many errors and misjudgements could have been avoided by using learnings from previous epidemics, particularly the 1918-1919 flu epidemic when international travel (mainly of troops in First World War) was a prime mode of spreading. It concludes that if similar outbreaks are not to turn into pandemics, much earlier action is needed, mainly closing borders and locking-down.</p> <p>Research limitations/implications: The research is based on what was known at the time of writing, when the pandemic’s exact origin was uncertain, when some statistics about actions and results were unavailable and when final results were unknown.</p> <p>Practical implications: Governments faced with early warning signs or pandemics must act much faster.</p> <p>Social implications: If the next virus is as infectious as SARS-CoV-2 but much more fatal, the world faces disastrous consequences if most governments act as slowly as this time.</p> <p>Originality/value: This is one of the first analyses of information management practices relating to the pandemic’s early stages.</p> <p>© 2020, Emerald Publishing Limited.</p>

Designing Online Platforms Supporting Emotions And Awareness

Authors <ul style="list-style-type: none">Collazos C.A.Fardoun H.Alsekait D.Pereira C.S.Moreira F.	Abstract <p>Due to the global pandemic (COVID-19) currently facing humanity, a new environment that promotes teaching-learning is now emerging.</p> <p>This environment that challenges traditional teaching practices created an opportunity for the technology industry to capitalize on by developing creative e-learning platforms that empowers the teaching-learning process, during this 'emergency' situation.</p> <p>E-learning scenario is an important element to be considered, as it offers a host of benefits, such as reducing costs, allowing for education on-demand, etc., to its adopters.</p> <p>However, the application of this could bring some challenges, as some of the existing online platforms are not conducive to support clear communication among academic staff.</p> <p>This paper describes a report identifying the main problems faced by teachers and students from different countries in Latin America, when using e-learning platforms in a lockdown scenario, reporting the importance to include aspects related with emotions and awareness.</p> <p>© 2021 by the authors. Guide To Giving During The COVID-19 Pandemic: The Moderating Role Of Religious Belief On Donor Attitude

<div>Authors</div> <div><div><div></div></div><div><div>Sarea A. Bin-Nashwan S.A.</div></div></div>	<div>Abstract</div> <div>Purpose: This study aims to empirically explore donors’ responses to fundraising appeals to mitigate the socio-economic impact of the COVID-19 crisis. Some governments worldwide have launched fundraising campaigns to support the pandemic relief efforts, such as the Feena Khair* campaign in the Kingdom of Bahrain. Specifically, the study examines how the internal and external aspects can fuel beliefs in the inclination of donors to give money.</div> <div>Design/methodology/approach: A quantitative survey instrument was developed, validated and disseminated. A total of 263 usable responses were obtained using the snowballing sampling technique. Partial least squares-structural equation modeling was used to analyze the research model and obtain meaningful results.</div> <div>Findings: The results show that external aspects, i.e. charity projects and trust in charities, have a significant relationship with donors’ attitudes toward fundraising appeal for the COVID-19 fight. Interestingly, the study demonstrates a significant moderating effect of internal values of religious beliefs on the positive relationship between external aspects and attitude to give money.</div> <div>Practical implications: The results suggest that governments and non-profit organizations should consider the important role of religious beliefs in driving people’s attitudes to engage in fundraising appeals to fight the pandemic. These findings could generate better insights and policies that boost relief and donation efforts in many ways, such as embarking on sensitization programs to create sufficient awareness on the importance of giving and social solidarity during this challenging time, strengthening the religious faith of donors, setting up charity projects with inclusive information and nurturing a high level of public confidence in charities.</div> <div>Originality/value: This study is likely the first study to focus on fundraising campaign attitudes during the COVID-19 pandemic in Bahrain. It is a pioneer study scrutinizing the moderating effect of religious beliefs on the association between extrinsic perspectives of donors and their attitudes toward monetary donations.</div> <div>© 2020, Emerald Publishing Limited</div>

Academic Staff Perceptions On Students’ Traditional Assessment Transformations Towards Online Evaluation During COVID-19 Pandemic In Higher Education: A Preliminary Study From Two Diverse Cultures

Authors <ul style="list-style-type: none">Taufiq-Hail G.A.-M.Aljahromi D.Sarea A.Kostikova I.	Abstract <p>COVID-19 has changed the dynamic of all societies and led to the closing of all educational organizations around the world.</p> <p>To overcome the sudden situation, some educational organizations used online instruction which came with several challenges such as student retention, change in learner-tutor relationship, and timing and nature of the lesson warrant exploration.</p> <p>The purpose of the current research paper is to investigate these challenges pertaining to student assessment transformation during COVID-19 from the perceptions of academic staff located in two diverse different cultures.</p> <p>This is an exploratory study which uses a quantitative survey tool that recruited lecturers from public and private universities in Bahrain and Ukraine. The main findings revealed some inadequacy in online assessment during COVID-19, increased workload and teaching and preparation time on behalf of the teachers.</p>

Whether Cryptocurrency Is A Threat Or A Revolution? An Analysis From ESG Perspective

Authors <ul style="list-style-type: none">Rabbani M.R.Alshaikh A.Jreisat A.Bashar A.Moh'D Ali M.A.	Abstract <p>The authors make a fundamental initial effort to conduct a qualitative review on the digital financial revolution called 'Cryptocurrency', mainly to provide a comprehensive discussion on whether Cryptocurrency is a threat to the Environmental, Social and Corporate Governance (ESG) investing goals?</p> <p>The study also aims to draw the current landscape and future landscape of Cryptocurrency in the global marketplace.</p> <p>The paper makes a qualitative review of the most recent and relevant articles on Cryptocurrency published using qualitative analysis. Key findings of the study reveals that Cryptocurrency is an exciting financial innovation, but it remains a financial experiment.</p> <p>Cryptocurrency fails the test of objectives of ESG investing. It is further concluded that the more and more production of Cryptocurrencies is not good for the environment, and it is a real threat to the ESG investment goals.</p> <p>The findings of the study will help the prospective and potential investors in better understanding of the Cryptocurrency as the long-term investment avenue in the global marketplace.</p> <p>Even though Cryptocurrency received overwhelming response in the last decade or so, the academic research on Cryptocurrency is still at the budding stage, primarily because the academic literature of financial technology is at the nascent stage.</p>

Technological Environmental Education In The Arab World: Case Of Kingdom Of Bahrain

Authors <ul style="list-style-type: none">Salman N.Mustafa M.S.Al-Shaalan A.Al-Mannai M.	Abstract <p>Technology’s influence on the environment is evident. It is linked to electricity. Visually, environmental issues are filling the World with abandoned equipment situations and rapid obsolescence of electronics goods. Most of the World is buying what they already have.</p> <p>Consumption control systems say it all. However, the recycling idea built on savings concepts can help save the day. Naturally, the technology is in favor of batteries, while diesel is still dominating. Shifting the power to the sun will not be easy. Resorting to the sun as the main source of energy needs diligent work.</p> <p>The road is fraught with difficulties, but there are signs of a transition to solar energy. This is apparent with the adoption of cars and most devices! The ‘solar air conditioner’ remains a key puzzle in the energy transformation of the earth’s recovery.</p> <p>Until the atmosphere returns to the maximum reasonable extent of oxygen, a person will be able to change the status quo by perfecting the charging of batteries through sunlight. Several modern and traditional methods explain this process accurately.</p> <p>The application and innovation remain to extend the traditional means, such as the use of lenses to diffuse light and make fire of palm leaves. We do not call for burning the woods, but rather we demand to prevent cutting to live on it, but we demand to preserve it and live under its shade. We hope to bequeath to the light to our children, so we sow in their life. This can be done by imposing green energy on education.</p> <p>Environmental awareness is very crucial in the process. Schools and universities hold the grounds for the kick-off. This research links technology, environment, and education. A literature review provided centered on environmental change to raise the awareness of youngsters.</p> <p>The finding of this research concludes that there is a lack of environmental change topics in education systems in the Arab World. Seventy universities from the Middle East websites were visited. Bachelor of Science Programs in the environment were looked at. Climate Change is not categorized as a priority in universities’ curricula across the Arab World.</p> <p>This can be achieved through opening a wide range of programs in the environmental Sciences. Simply, environmental awareness requires more attention in the region.</p> <p>© 2021 IEEE</p>

On A Single Server Queue With Two-Stage First Essential Service Followed By One Of The Two Types Of Additional Optional Service And Optional Deterministic Server Vacations

Authors

- Madan K.C.

Abstract

We study the steady state behavior of a batch arrival single server queue in which the first service consisting of two stages with general service times G_1 and G_2 is compulsory. After completion of the two stages of the first essential service, a customer has the option of choosing one of the two types of additional service with respective general service times G_1 and G_2 .

Just after completing both stages of first essential service with or without one of the two types of additional optional service, the server has the choice of taking an optional deterministic vacation of fixed (constant) length of time.

We obtain steady state probability generating functions for the queue size for various states of the system at a random epoch of time in explicit and closed forms. The steady state results of some interesting special cases have been derived from the main results.

Graphical Analysis Of Single Sideband Modulation

Authors

- Al-Sammak A.-I.
- Jameel A.J.
- Alaiwi A.

Abstract

In any undergraduate program in Electrical engineering or related fields, such as Electrical, Electronics, Computer Engineering or Telecommunications Engineering, at least one basic course on communication systems is given.

Communication systems can be either analogue or digital. Analogue communication techniques are a pre-requisite to understanding digital communication systems that affects all aspects of our life.

In analogue communication a key topic is Amplitude Modulation (AM) which includes Single Sideband (SSB) modulation. This paper presents a new technique of analyzing SSB graphically in frequency-domain in contrast to most of standard textbooks which normally analyze SSB in time-domain using trigonometric identities.

This technique is a general one that can be applied for both single tones (sine or cosine) as well as complex signals. This makes it easy to apply, understand and visualize by undergraduate students encountering this topic for the first time. Effectiveness of the graphical technique was tested at Ahlia University, College of Engineering which shows this technique is preferred by students over the classical one.

Online Financial Reporting Disclosure In Islamic Banking: Evidence From Bahrain

Authors <ul style="list-style-type: none">Sarea A.M.Khalid A.Shamsuddin A.B.Hawalдар I.Hossen Z.	Abstract <p>This study aims to investigate the level of disclosure of Islamic banking in Bahrain by the web-based disclosure.</p> <p>The web-based disclosure method was implemented to determine the quantity of “the level of web-based disclosure of Islamic banks in Bahrain” by using an index that consists of 90 items.</p> <p>The findings of the ‘descriptive analysis’ indicated that the overall level of web-based disclosure was 73.3%. The regression results showed a “positive relationship between the independent variables (firm size, age, and profitability) and the level of web-based disclosure”.</p> <p>The results of this paper help the “Islamic banking in Bahrain” to increase the level of web-based disclosure to reach full online financial reporting disclosure (OFRD) to satisfy the stakeholders.</p> <p>The outcomes of this study will be useful elsewhere.</p> <p>© 2021 Inderscience Enterprises Ltd.</p>

Exploring The Role Of Artificial Intelligence In Healthcare Management And The Challenge Of Coronavirus Pandemic

Authors

- Zainal M.M.
- Hamdan A.
- Al Mubarak M.

Abstract

This article focuses on the role of artificial intelligence in healthcare management and in particular, the support it can provide to efficiently improve medical imaging and radiology procedures.

This highlights the utilization of artificial intelligence in healthcare to help solving problems and making best decisions for private and public health by reducing human errors and discovering diseases in early stages.

Furthermore, this study uses artificial intelligence in the radiology department to help radiologists better diagnose diseases and increase efficiency using reliable database generated by such technology.

This advanced technology is undoubtedly playing a role in dealing with Coronavirus pandemic, a technology that can contribute in many health facilities including medical imaging.

A survey was used to reach to findings targeting a sample of medical students and staff with medical backgrounds. Three main factors that were found important in the study that need to be addressed are awareness, technology, and prediction of future crisis.

Investigation On The Influence Of English Expertise On Non-Native English-Speaking Students' Scholastic Performance Using Data Mining

Authors

- Bhaskaran S.S.
- Al Aali M.

Abstract

This investigation reports about an understanding of the connection between English skill and scholastic accomplishment of science students in Bahrain. Data from student information system were investigated by applying data mining techniques mainly decision tree algorithm.

The results demonstrated a significant effect of English expertise on students' final cumulative grade point average (CGPA). These discoveries demonstrate that the English expertise of graduate students in a non-western polyglot scholastic background is significant for their scholarly accomplishment.

Results from this investigation affirm the requirement for colleges in polyglot backgrounds to put resources into non-native English-speaking (L2) graduate students' English expertise toward the beginning of their scholastic projects.

Instructional proposals are made, alongside recommendations for additional investigation.

The Contribution Of Information And Communications Technology In The Sustainable Development Goals

Authors

- Rahma Y.A.
- Chia C.C.
- Wadi R.M.A.

Abstract

The main aim of this research is to find out the contribution of information and communications technology (ICT) in the sustainable development goals (SDGs) in the Ministry of Interior in Bahrain by measuring the impact of dependent variable that is SDGs and independent variables that fall under material capabilities, software and employee skills.

The questionnaire was submitted to 220 employees of the Ministry of Interior, and the online questionnaire was completed by 162 recipients, representing 73.6% of the recipients.

Results have indicated that software has no significant impact on SDGs, while material capabilities and employee skills have significant impact on SDGs. It is recommended that the Ministry of Interior in the Kingdom of Bahrain must develop appropriate policies that would help in solving the expected technical problems.

The role of the Ministry of Interior in providing modern equipment and financial support necessary for digital transformation, and considering the provision of materials that contributes to energy conservation and the environment to reach the goals of sustainable development.

In addition, the Ministry of Interior in the Kingdom of Bahrain should encourage and facilitate the process of communication between employees at a personal level and a higher level on an individual basis and working groups.

Artificial Intelligence And Women Empowerment In Bahrain

Authors

- Al Shehab N.
- Hamdan A.

Abstract

Bahrain has witnessed many key developments in several sectors. The role of the national drive has contributed to economic diversification and financial thrive.

Bahrain considers itself a getaway to the entire world due to its strategic location and ideal environment that attracts many startups and business entities.

Recently, the government of Bahrain exhibits an outstanding potential in Artificial Intelligence (AI) and started to tap into the digital transformation era due to the Fourth Industrial Revolution (4th IR).

To be aligned with the Bahrain Economic Vision 2030, the financial sector regulated by the Bahrain Central Bank (CBB) implemented several financial solutions based on innovation in technology to increase the customer experience and satisfaction which ultimately brings economic fruitful results.

Moreover, Bahrain becomes the second world hub for Islamic Finance services after Malaysia with more than 25 Islamic Finance organizations. Furthermore, it undertakes major milestone to adapt the concept of artificial intelligence in the financial and banking sector and has created a competitive regional presence in Financial Technology (FinTech).

This research aims to briefly define the notion of artificial intelligence (AI) and highlight Bahrain's achievements in the same field during the Fourth Industrial Revolution and how the artificial intelligence contributes to a rapid development even though it is still in its early phases.

Beside this, the research presents the women empowerment in Bahrain and their active participation in all arenas particularly in the financial sector with exceptional lead in innovation.

One of the advanced technologies arises in Bahrain is the (Fintech) which promotes the financial services to a superior level. Therefore, artificial intelligence investments require certain set of knowledge and skills to be obtained by the workforce that led to excellent conclusions.

Based on the academic perceptions, the main probable challenges of AI are addressed. A set of recommendations are proposed to overcome the uncertainty and accomplish the planned vision 2030.

Adoption Of Fintech Services In The Banking Industry

Authors

- Bureshaid N
- Lu K.
- Sarea A.

Abstract

Today, all financial services aspect seems to be touched by technological forces. FinTech development is in its early stages; many researchers and practitioners believe that it will shape and define the financial industry’s future. The researcher intends to examine the determinant of FinTech services adoption among bank consumers.

In line with the literature, the study proposed applying a theoretical framework developed from existing literature by using variables associated with the Technology Acceptance Model (TAM), and Diffusion of Innovation Theory (DOI) to test the critical factors that impact the intention to adopt FinTech services.

This study also investigates whether the effect of perceived risk on FinTech adoption intention differs depending on the Consumers’ behavior.

Blockchain Technology Implications On Supply Chain Management: A Review Of The Literature

Authors

- Alalwi B.
- Mazzuchi T.
- Hamdan A.
- Al Mubarak M.

Abstract

Blockchain is a revolutionized decentralized ledger that emerged with the introduction of cryptocurrencies like Bitcoin.

Blockchain is one of the emerging technologies that can be leveraged to enhance the complex processes of Supply Chain Management.

The opportunities that Blockchain can provide lies on four areas: traceability, supply chain decentralization, visibility and transparency.

In light of the current methodologies and results presented by various scholars; this literature review aims to address the current state of art of Blockchain in supply chain applications.

Several opportunities and research areas are identified from a system design perspective, theoretical analysis and decision-making tools.

The paper offers valuable insights for practitioners and supply chain experts into how Blockchain technology has the potential to disturb existing processes.

It also lays the ground for future research agenda to exploit the applications of Blockchain in Supply Chain Management.

Effect Of Pricing In Digital Markets On Customer Retention

Authors

- Faisal M.
- Hamdan A.

Abstract

Pricing is one of the main factors in the marketing mix which helps business determine their strategies to opt for success pricing plays a major role in digital marketing as it attracts customers to their products.

Technology has led businesses to search for alternative methods of attracting and retaining customers. The increase in market competition is making it hard for businesses to survive. Businesses are now moving on to digital markets to keep up with the new era.

The aim of the research was to evaluate the effect of pricing in digital market on customer retention. The study involved the evaluation of the effect of pricing and promotional strategies on customer retention of businesses that have digital presence. The research was of quantitative nature.

Though secondary data was reviewed and presented to gain background information regarding the research topic, a questionnaire was used to gather relevant data from participants, and then processed through SPSS to determine whether the hypotheses of the study was accepted or rejected. A total of 130 questionnaires were distributed.

The researcher regathered 121 questionnaires, out of which only 113 were fully completed and viable to be used in the study. The researcher conducted a reliability test, which showed that the questions were valid to answer the research question.

The correlation test showed that all questions correlated well with each other.

Quality Of Institutions, Ict Diffusion And Financial Development: An Empirical Evidence From Developing Countries

Authors

- Cherni F.
- Goaied M.
- Sarea A.

Abstract

The aim of this study is to analyze the link between the quality of institutions and the financial development using a panel data that include 93 developing countries for the period 2002–2017 with a special focus on MENA region.

Empirical results show that improving the quality of institutions i.e., strengthening the institutional infrastructure, can promote financial development.

These results are robust for all financial development indicators selected in this study.

The non-linear relationship between institutional quality and financial development, depends on use of ICT showing that more use of ICT can help corruption control and boost financial development.

Fintech In Oman: Present And Future Scenario

Authors

- Kukreja G.
- Gupta R.
- Gupta A.

Abstract

Globally, Fintech is a rapidly growing and evolving buzz word in the financial industry. COVID 19 gave a big push to fintech products all over the world; Oman is no exception.

People prefer to use touchless financial services. It is revolutionizing the finance and other industries with digital technology that helps develop financial activities and improve the flow of financial transactions as well as provide a seamless experience to customers.

This new technology also impacts the Middle Eastern region and the Gulf Cooperative Countries (GCC). In contrast, a country like Oman has embraced this new technology development in both the public and private sectors. This chapter will focus specifically on Oman and describe how Fintech embraced and implemented there.

This chapter will also examine how it is impacting the Omani banking and finance industry at present and what would be the future trends. This chapter would be useful for strategic consultants, developers, analysts, scholars, entrepreneurs and big conglomerates to make educated choices and build a strong sense of understanding of Oman's Fintech environment and the unexplored possibilities.

Culture And Learning Style’s Sensitive Learning Outcomes Aid Multicultural Classrooms

Authors

- Razzaque A.
- AlArayedh H.M.
- Moylan C.

Abstract

Past scholars have highlighted on learners’ dissatisfaction with multicultural-classrooms teachings.

This represents a vital concern for investigation since ample students from different cultures enrol in western higher education (HE) institutions (HEIs) despite the reported declining teaching-learning quality.

This study investigates whether learners’ culture (LC) and learning style (LS) affect learner expectations through learning outcomes (LOs). Instructors can improve curriculums using complimentary LS and LOs.

This study confirms that national culture and LS do govern LOs; thru an interdisciplinary model assessing the effect of Hofstede’s national culture and Charlesworth’s learning-styles on learning outcomes.

An adopted survey was distributed to undergraduates in a NY-based HEI. Data analysis, mainly confirmatory factor analysis and structural equation modelling, confirmed that individualism/collectivism, power-distance national culture, and activist and pragmatic learning styles, empowers learning outcomes (i.e., learner expectations).

Implications to theory and practice are also expressed. Copyright

Social Commerce: A Concept Explication

Authors

- Almahdi M.H.

Abstract

Attention to social commerce has been growing in research and practice in recent years.

Many industry articles and academic papers have been dedicated to defining the concept, outlining its components, and highlighting its potential, producing varying and often conflicting findings.

This literature review paper contributes to this conversation by introducing a framework of three core themes of social commerce (i.e., social, commercial, and technological).

The framework is utilized to offer a tentative definition of social commerce and shed light on what distinguishes it from two closely related concepts: social media and e-commerce.

The paper concludes with highlighting persisting gaps in the conceptualization of social commerce and offers recommendations for future research to further our understanding of the concept.

- Elareshi M.
- Habes M.
- Tahat K.M.
- Ali S.

Abstract

The digitalization of media and its convergence in web-based platforms greatly influenced the journalists’ perceptions. Social media is a contemporary source of information especially during the crisis situations when direct social connectivity is difficult.

The current article scrutinized the potential relationship between Arab Journalists, their opinion, usage and dependency on social media. The researchers selected a sample of n = 1,443 journalists from different Arab countries, and employed uses and gratification theories as the primary theoretical support.

Data gathered through online surveys indicated that social media well serves the journalists to gather information they need during the Covid-19 outbreak. Respondents expressed their strong dependency on online platforms due to its usefulness.

Overall, the study found positive opinion and attitudes regarding social media reliance among Arab journalists. Thus, the researchers recommend more studies to highlight the journalists’ dependency on social media even in the ordinary situations to further elaborate its importance.

Applications Of Artificial Intelligence In COVID-19 Pandemic

Authors

- Al-Shoqran M.
- Shorman S.

Abstract

COVID-19 pandemic is the most notable world crisis in the modern era that originated from Wuhan, china in late 2019 has affected all the nations and triggered a global economic crisis.

As well artificial Intelligence (AI) plays an important role in the estimate and expectation of the next phase and they are helpful for searches operation. Covide19 structure was studied in multiple research papers that studied the impact of artificial intelligence and how to apply its algorithms to predict Covid19 directions and cases.

This study addresses significant issues on Covid19 which will study the impact of Total Cases and Serious-cases on Total Deaths using artificial intelligence language-python to implement linear regression on some countries data. Likewise used the content analysis to determine the strengths and advantages of using AI on COVID19.

In addition to explaining the role of artificial intelligence on COVID19.

Internet Of Things And Its Impact On The Future Of Education

Authors

- Mseer I.N.

Abstract

Internet of Things (IoT) is the change cycle in various parts of our everyday life. IoT advances contrast from past developments as they are universal and urge answers to be wise and self-sufficient Advances in the IoT are a significant key innovation pattern.

Ubiquitous sensors and the capacity to overcome any barrier between the actual world and the machine world were seen as the new learning model's calculated system.

The deduction behind this incredible change in perspective is the capacity to insert sensors into any article and use Machine-to-Machine (M2M) correspondence to associate billions of items/gadgets to the current Internet foundation.

The aggregate of the actual world is coming on the web quickly.

A Review On Industry 4.0 Management For Sustainable Technologies

Authors

- Al-Shoqran M.
- Al Zub'i S.

Abstract

Many recent studies indicate that Industry 4.0 management plays an important role in sustainable development.

This is because of the role of rapid communication technologies, and massive cloud information services in the acceleration of technological development.

Therefore, many organizations around the world have adopted digital technologies, artificial intelligence, big data, and Industry 4.0 technologies, as strong enablers to achieve sustainable development goals.

This study presents a review of Industry 4.0 management in sustainable technologies via content analysis of some related articles with determining its strengths and advantages.

In addition to examining the main components of Industry 4.0, which include IoT, and Smart Factory. Also, this paper explained the components and characteristics of Industry 4.0.

Therefore, it is suggested that organizations around the world need to increase the use of I4.0 technologies in Its economic activities and to achieve sustainable development.

Knowledge Management In Higher Education Institutions: Facts And Challenges

Authors

- Wadi R.M.A.
- Khalf L.S.

Abstract

The Higher Education Institutions (HEIs) are the most appropriate institutions to adopt the knowledge management and its implementation because they are replete with massive strong knowledge infrastructure, while a knowledge society-imposed roles and functions, most notably the production and application of knowledge through investment in scientific research.

Across the globe, the role of HEIs as knowledge providers has been scrutinized and challenged by the various stakeholders. Therefore, HEIs are putting significant efforts to manage their knowledge based strategic assets. This study aimed at exploring knowledge management at HEIs in reality and identifying the knowledge management processes of these institutions.

Intelligent Community Detection: Comparative Study (COVID19 Dataset)

Authors

- Moosa J.
- Awad W.
- Kalganova T.

Abstract

Community detection is an important tool for analyzing networks; it can help us understand the structures and functional characteristics. Network communities represent a principled way of organizing real-world networks into densely connected groups of nodes, whereas a community is a cluster of nodes that are strongly connected to each other in a subnetwork than to the rest of the network.

This has remarkable results in various fields, e.g., social science, bibliometrics, marketing and recommendations, biology etc. This research proposes a dataset based on COVID19 distribution.

The network dataset is formed by tracing the transmission of the virus among the world countries. This experiment demonstrates the spread of COVID19 and its mutated strain.

Several algorithms such as Girvan Newman, Greedy, Louvain, Clustering, and Label Propagation are implemented on the proposed dataset, and the results are evaluated using the modularity measure.

The proposed COVID 19 dataset demonstrated the properties and dynamic behavior similar to Zachry's Karate dataset.

The Usage Of Artificial Intelligence In New Media

Authors

- Hassan A.

Abstract

The study aims at identifying the usage of Artificial Intelligence in new media in the world. The results indicated that in Artificial intelligence, all the elements of the communication process play their role, whether in the presence of the human element in it, or in the absence of the human element and replaces it by one of the techniques of artificial intelligence and the fourth industrial revolution, the study also revealed that Artificial Intelligence will allow media professionals to analyze data, identify patterns and trends from multiple sources, see things that the naked eye cannot see.

Financial Statements Fraud And Data Mining: A Review

Authors

- Sanad Z.
- Al-Sartawi A.

Abstract

Financial statement fraud has been a serious concern for many investors and other stakeholders, and this motivated many researchers in developing traditional regression analysis in order to detect financial statement fraud.

Intelligent financial statements fraud detection systems were continuously developed to uncover any potential for fraud signals which could assist the stakeholders in taking their decisions.

This study reviews and identifies the gaps in the previous studies that tested financial statement fraud detection using data mining techniques. The study expands the knowledge of this research topic among researchers, forensic accountants, auditors and regulators and provides organizations with useful information regarding the various types of financial fraud and data mining techniques available.

E-Learning Acceptance During The COVID-19 Outbreak: A Cross-Sectional Study

Authors

- Habes M.
- Ali S.
- Khalid A.
- Haykal H.A.
- Elareshi M.
- Khan T.
- Ziani A.

Abstract

The rise of Covid-19 raised several concerns for the educational policymakers and stakeholders all over the world, including Pakistan. During the pandemic, institutional closure was the only solution to hamper the virus spread.

However, the adoption of E-learning largely sustained educational activities, raises several questions about its effectiveness. This study examines E-learning acceptance during the Covid-19 outbreak in Pakistan.

It employed cross-sectional design and a random sample of n = 314 students from Sahiwal Medical College, Sahiwal, Pakistan. The researcher further applied Media Dependency Theory to provide support to the conceptual model Theory.

Findings indicated a strong significant relationship between students' positive perceptions towards E-learning during Covid-19. Respondents considered E-learning as an effective substitute for the traditional learning environment, leading to improved academic performance.

The implications of the study lean on the fact that using E-learning during in unforeseen times has not only highlighted the role of internet-based learning, but it has also demonstrated a greater dependence on new media technology. We suggest that, suggesting that E-learning is a potential solution to the problem of sustaining educational activities during institutional closure.

The Use Of Information Management Towards Strategic Decision Effectiveness In Higher Education Institutions In The Context Of Bahrain

Authors

- Al Dhaen E.S.

Abstract

Purpose: Strategic decision importance has rarely been investigated as a decision-specific characteristic in the strategic decision-making process (SDMP) literature taking into consideration information management while taking important strategic decisions. Here, the ability of decision importance to predict decision effectiveness as an outcome of SDMPs in higher education institutions (HEIs) is examined in the context of Bahrain.

Design/methodology/approach: A conceptual model is developed relating decision importance to decision effectiveness indirectly via the SDMP characteristics intuition, rationality and decentralization. Data from a cross-sectional questionnaire completed by leaders of HEIs and academics involved in strategic decision-making in Bahrain are used to test the model and hypotheses via correlation analysis. The paper also considers a literature review of the use of information management while taking a strategic decision.

Findings: Decision importance is shown to positively influence decision effectiveness in Bahraini HEIs mediated by rationality and by decentralization in decision-making, although negative effects of decentralization are also demonstrated. However, decision importance does not influence decision effectiveness mediated by intuition.

Research limitations/implications: Due to the small sample size, the results cannot be generalized to contexts beyond HEIs in Bahrain. Additional SDMP characteristics of significance in the context of HEIs could be future investigated, for instance, political behaviour and lateral communication, are not included in the model. Future research exploring the latter two aspects could provide deeper insight into the findings.

Practical implications: The findings of this paper could be considered by HEIs senior management and members of the governing body while strategic decision-making, which could be at different levels, including strategic planning or assessing a strategic decision in terms of effectiveness. This paper will also provide insight one the use of information while considering strategic decision-making.

Social implications: A model leading for effective strategic decision-making could be used by leaders of HEIs and regulators including licensing bodies and QA agencies to set standards for HEIs for sustainable performance and quality education in line with United Nations Sustainable Development Goals and Initiative. Strategic decision-making will have an impact on the overall performance of HEIs and serve all relevant stakeholder's including parents, students, employers and industry.

Originality/value: Little research conducted in relation to strategic decision-making in the Gulf Cooperation Council therefore, this research will add original findings and the outcome of this study will lead to future research related to SDMP and the use of information management in the overall strategic decision-making.

- Hamdan A.

Abstract

This study aims to examine how public governance impacts and affects economic growth in the Gulf Cooperation Council (GCC) which was established on 25th May 1981 and is active till to date, and whether public governance indicators significantly influence the economic growth of these countries.

The study's sample includes the six GCC countries in the period of 1996-2019. The study model tests the effects of the independent variables of public governance which are the worldwide governance indicators on the dependent variables of economic growth which are the Gross Domestic Product (annual GDP growth in %), GDP per capita growth (annual in %) and GDP current US\$) using a multiple regression model (the fixed effect approach).

In this study, only four worldwide governance indicators were selected: the control of corruption, government effectiveness, regulatory quality, and the rule of law.

Furthermore, this impact was examined using several control variables, including labor force, working capital, oil price, inflation rate, population, and Human Development Index. The data on dependent and independent variables was collected from the World Bank official website.

It is found that the control of corruption and the rule of law have a positive, statistically insignificant impact on economic growth, moreover, government effectiveness and regulatory quality have positive, statistically significant impact on economic growth.

Corporate Governance, Ownership Structure And Firms’ Financial Performance: Insights From Muscat Securities Market (Msm30)

<div>Authors</div> <div><div><ul style="list-style-type: none">Queiri A.Madbouly A.Reyad S.Dwaikat N.</div></div>	<div>Abstract</div> <div><p>Purpose: The purpose of this study is to investigate the relationship between selected board characteristics and ownership elements and the performance of firms listed in the Muscat Securities Market (MSM30). The examination focused on how the firm financial performance was affected by the board size, the number of board meetings and the ratio of the independent board of directors along to the ownership concentration types (i.e. institutional, state and concentrated individual ownership).</p><p>Design/methodology/approach: Data were extracted from the annual reports available online on the MSM30 website over a period of seven years (2009–2015). The sample consisted of 14 firms belonging to the non-financial sector. The data were of a balanced type and there were 98 observations. The analysis was conducted using the ordinary least square in STATA with the use of the robustness technique of standard error.</p><p>Findings: The findings of this study provide evidence that the selected elements for board characteristics and ownership influence firm performance. Nevertheless, such influence has its interpretation that differs to some extent from other securities markets in the developing countries. For instance, the ratio of the independent board of directors, the number of board director’s meetings, state ownership and concentrated individual ownership were inversely affecting the firm performance. However, institutional ownership and board size were found to have a positive effect on firm performance.</p><p>Originality/value: Studies on the influence of corporate governance and ownership structures in the context of Oman are still scarce. MSM30 received little attention, even though such an index encompasses the most liquid and the most profitable firms. MSM30 is an important index for investors in Oman looking for capital gains. Accordingly, this present study contributes to the knowledge body by providing new findings related to Oman and compares it with the other markets within Gulf Council Countries (GCC) and around the world. This will provide more understanding of the Omani context. Moreover, the authors anticipate that the outcomes of this research, which so far is the most comprehensive study in the Omani context in terms of the impact of corporate governance and ownership structure on firm financial performance can significantly shape corporate governance discourse, practices and policies in Oman, in particular, and in other GCC countries in general, to improve financial performance and corporate sustainability.</p><div>© 2021, Emerald Publishing Limited</div></div>

Advanced Smart Car Park Management System For High Car Park Utilization

<div>Authors</div> <div><div><div></div><div>Aldallal A.S.</div></div><div><div></div><div>Al Zallaqi A.</div></div><div><div></div><div>Mohammed A.</div></div></div>	<div>Abstract</div> <div><p>Finding a car park in a crowded parking lot is becoming a challenge that is attracting increasing interest from both industrial and academic researchers. This paper aimed to provide an efficient utilization of a parking lot by solving the problem of wrong parking without using monitoring system or human intervention.</p><p>This is accomplished through developing a multi-functional smart car parking system that is more cost effective and user friendly than existing systems. The proposed system utilizes a number of low-cost light dependent resistors and IR sensors connected to a raspberry pi as a control unit.</p><p>Simple to use web application is also developed to receive the data from the raspberry pi that will display the location of empty parking slots on user's smart phone.</p><p>The project was highly successful attaining 100% utilization of parking slots, no congestion occurred simply by preventing cars from entering the park if no parking spaces were available.</p><p>No car can occupy more than one slot. Locations of empty slots are accurately displayed on the web application; hence, facilitating the process of reaching the empty slot quickly.</p><p>This system is beneficial for drivers as it will enable them to locate the exact empty parking slot easily, so they save their time and consume less fuel chasing an empty slot.</p><p>In addition, no congestion will occur inside the parking area. Moreover, this system is also beneficial for car park owners as the utilization of the car park become more efficient where the number of parking cars equals to the number of parking slots.</p><p>© 2021, The Author(s), under exclusive license to Springer Nature Switzerland AG</p></div>

Online Paying Happily To Buy Pain In Electronic Games: The Marketing Mystery

<div>Authors</div> <div><ul style="list-style-type: none">Al Balushi H.Gupta V.Madbouly A.Reyad S.</div>	<div>Abstract</div> <div><p>It is very ironical that thousands of people in our world spend millions of dollars to get rid of pain and there are those who pay hundreds for experiences that cause them pain.</p><p>These buyers take the decision to buy goods or services based on their emotions only. Simply, these buyers buy their pain. This study is an attempt to understand this phenomenon.</p><p>The main objective of this chapter is to identify the extent of emotions impact on the consumer of electronic games procurement decision. Qualitative research method has been followed in this research via case study strategy. Interviews were conducted with a group of respondents who are used to play electronic games in Omani malls.</p><p>This study has been conducted for participants from different nationalities. The main finding of this research is surprisingly 82% respondents were buying these painful experiences for fun and enjoyment and 89% of the respondents were satisfied after toiling trying to win when playing the electronic games.</p><p>These results bring useful learning for experiential marketing professionals and academicians and pave way for further researches to develop this domain of knowledge. The main limitation faced researchers is the difficulty to get approval from participants who are interested to be interviewed.</p><p>However, researchers successfully conducted the interviews with a diversified sample with varying age, gender, nationality and experience.</p><p>© 2021, The Author(s), under exclusive license to Springer Nature Switzerland AG</p></div>

Role Of Artificial Intelligence During The Covid-19 Era

Authors

- Alansari H.
- Gerwe O.
- Razzaque A.

Abstract

Artificial’ ability the term artificial intelligence (AI) was first coined by John McCarthy in 1956 when he had the initial theoretical meeting on this topic. But this journey to see if machines will really believe started much before this.

Five years later Alan Turing published the article on this idea of machines being able to imitate human race and the ability to do intelligent things, e.g., play chess. Yet, most people be uncertain about the purpose of AI.

What if he produces the AI that has the only aim of estimating the amount of Pi, but has decided that by getting earthly death and giving human lives, it could gain another digit to its collection of digits efficiently?

Therefore, the entire idea of knowing in machines is unlikely. The only plausible explanation of the power to philosophize, emotionally interact with humans and reason motivation is artificial awareness.

Board Of Directors Composition And Social Media Financial Disclosure: The Case Of The United Arab Emirates

Authors

- Hannoon A.
- Abdalla Y.A.
- Musleh Al-Sartawi A.M.A.
- Khalid A.A.

Abstract

Among the most significant governance issues currently faced by the modern corporation are those relating to diversity, such as gender, and independence of directors. Another modern issue facing managers is social media disclosure.

The paper aimed to address several research questions, mainly the association between boards of directors’ composition: board diversity, and board independence, and the level of financial disclosure on social media by UAE firms.

The research data is collected from 103 firms listed in the UAE financial markets for the period 2018–2019. The research result indicates that the relationship between board composition and the social media financial disclosure is significant and positive.

This study provides contributions to UAE’s government, policymakers, and regulators with regards to two important issues, particularly gender diversity on the board as well as the modern disclosure tools that could be used by firms to reduce the agency problem.

The Role Of Higher Education Institutions In Building The E-Innovation System In The Sultanate Of Oman

Authors

- Madbouly A.
- Reyad S.

Abstract

The purpose of this study is to analyze the Role of Higher Education Institutions on the E-Innovation of Oman. It was found that there are several conditions for the expansion of the contribution of universities to regional development of E-Innovation system.

These conditions are predominantly related to a broad set of factors that relate to characteristics of HEIs, characteristics of the regional firms, aspects of the collaborative relationship, and characteristics of environmental context in which HEIs and firms are embedded.

Abstract

The study was undertaken to investigate the effect of WhatsApp on the academic performance of Mass Communication education students. Four research questions were raised to guide the study.

The study employed descriptive research design. The population of the study comprised of 275 Mass Communication education students were randomly selected and used as sample for the study. The instrument that was used for the study was a set of structured questionnaires which were validated by the supervisor and one other expert.

The results indicated that there is no significant influence of frequency of WhatsApp usage on the academic purposes of this usage, also there is significant influence of the rate of WhatsApp usage on the academic purposes of this usage, and there is significant influence of topics that students communicate through WhatsApp and the academic purposes of this usage and there is no significant influence of patterns of WhatsApp usage on the academic purposes of this usage.

Exploring A Broadband Marketing Strategy To Build Customers' Relationship Management: Buzz Marketing Perspective. A Case Study Of Virgin Broadband In Stafford-Shire University

Authors

- Kamran H.
- Mahmood M.
- Badawi S.

Abstract

UK Broadband Industry has become highly competitive of late with the advent of numerous broadband service providers. Different service providers follow different marketing strategies to woo customers.

Virgin has acknowledged the growing importance of these young consumers and reaped in huge benefits by targeting them by better marketing and formulating strategy that is based on the needs and wants of university students.

Although lot of studies have been done on marketing strategies for young customers, there is still a gap in the understanding of consumer behaviour dynamics of a university student and his choice of broadband service provider.

The researchers strive to analyse the marketing strategy of Virgin vis-à-vis University student's needs and requirements. The research reviewed current literature, questionnaire surveys and interviews with University students, Virgin Sales staff and Sales managers.

To reinforce the findings, an online survey has been undertaken to add rigor to the argument. The findings show that young customers like university students need to be treated differently rather than as normal residential customers.

Does Social Reporting Matter? Empirical Evidence

<div>Authors</div> <div><ul style="list-style-type: none">Sarea A.Salami M.A.</div>	<div>Abstract</div> <div><p>Purpose: This paper aims to examine the level of Islamic social reporting (ISR) disclosure of Islamic banking in Gulf Cooperative Council (GCC) countries using a checklist based on Accounting and Auditing Organization for Islamic Financial Institution (AAOIFI) standards.</p><p>Design/methodology/approach: A quantitative method – Tobit Model – is adopted in this study. The unweighted disclosure method used to measure the ISR disclosure checklist consist of 51 items in Islamic banks (IBs) in the GCC countries. The stakeholder theory and legitimacy theory are used to investigate the possible banking performance factors affecting the accounting practices such as ISR disclosure in IBs.</p><p>Findings: The findings show that the ISR disclosure index is linked to the IBs’ performance indicators in GCC countries. The result indicates both Islamic banking profitability and age establish positive and statistically significant relationship with ISR disclosure while leverage establishes significant negative relationship with ISR disclosure. This implies that Islamic banking profitability, leverage, and age are essential bank performance indicators that make ISR disclosure worthy of doing even in the presence of Islamic bank stakeholders in GCC countries. This finding linked compliance with the mandatory disclosure recommendations of AAOIFI Standard No. 7, as well as voluntary disclosure.</p><p>Research limitations/implications: This study used cross sectional data for the year 2019, which is considered more recent despite its being a year data analysis. However, future research should consider mix method as well as more analysis tools provided their number of observations are sufficient enough.</p><p>Social implications: The study identifies the factors that may enhance Islamic financial institutions, including Islamic banking in GCC countries, to comply with ISR disclosure. The application of this study supports Accounting standards setters to consider standards that support ISR disclosure in Islamic banking in different countries.</p><p>Originality/value: To the best of the authors’ knowledge, this study is novel in exploring the level of ISR disclosure in Islamic banking in GCC countries by using a checklist based on AAOIFI standard No. 7 and establishes the relationship between ISR disclosure index and IBs profitability, leverage, as well as age of Islamic banking in operation.</p><p>© 2021, Emerald Publishing Limited</p></div>

The Contribution Of Healthcare Middle Managers As Change Agents In The Era Of COVID-19: Critical Review

Authors <ul style="list-style-type: none">Ahmed N.Hamdan A.Alareeni B.	Abstract <p>This paper critically investigates the contribution of effective Healthcare Middle Management as change agents based on recent studies, and argues that management change in a crisis such as the COVID-19 pandemic can be well-handled by Healthcare Middle Managers, who are critical components in the stability and success of organizational transformation in a turbulent economy.</p> <p>With the emergence of the COVID-19 pandemic, organizations around the world have struggled to adapt effectively to change, and healthcare organization have especially suffered through subjective responses. However, these methods have been proven ineffective by recent studies.</p> <p>This paper critically discusses the recent literature on the contribution of Healthcare Middle Managers as change agents in organizational change during cases of crisis and uncertainty.</p> <p>The results have shown that supporting Middle Managers in Healthcare is crucial for creating a sense of change to other immediate and relevant parties within the organization, while minimizing unnecessary costs and losses.</p> <p>Consequently, this paper contributes to clarifying the problem of not engaging the Middle Managers sufficiently with Healthcare owners and directors, and addresses the problem of disregarding Middle Managers as change agents.</p> <p>Thereby, the paper develops management knowledge, and it creates an opportunity for researchers to test this study on quantitative and qualitative methods in any population</p>

Artificial Intelligence And Coronavirus COVID-19: Applications, Impact And Future Implications

Authors
<ul style="list-style-type: none">AL-Hashimi M.Hamdan A.

Abstract

Artificial Intelligence (AI) acts as the potentially powerful tool in fighting against the spread of COVID-19. Since the outbreak of the pandemic, the use of AI in the healthcare sector has been largely evident. This chapter provides a detailed analysis regarding the use of AI technology in the healthcare sector and identifies its contributions in the fighting against the deadly pandemic, i.e. COVID-19. Discussion regarding the challenges in the AI technology is further provided. Following the analysis, it has been revealed that AI is effective and contributes under six areas; including the production of early warnings and alerts, tracking and prediction, data bash boards, diagnosis and prognosis, information related to treatment and cures resulting in controlling the widespread of the disease. In broader terms, AI is effective and can be used to identify and analyze patterns in complex and large data sets in a more precise time and high speed which was never done before. It is further useful in providing a thorough search related to the literary studies conducted previously regarding the development of different drugs. Furthermore, manufacturing of drugs is held through robots designed by the infusion of the AI technology for fast and quick delivery of services. Contributions of AI when used in the healthcare industry is further important to search out patients that are suitable for the clinical studies. AI due to its fast-tracking systems is further effective in reducing the workload of radiologists, since it is capable of reading the radiological reports through deep learning and machine learning systems. These scans can be stored for some time and are available when required in order to train the AI systems. AI through its fast-tracking quality, allows cost and time effective functions by quickly analyzing a number of scans resulting in providing better treatment to patients. In the healthcare sector, AI has shown promising results by detecting conditions such as; pneumonia, skin cancer, eye diseases etc. Also, most hospitals used AI technologies to analyze echocardiography scans, ultra sound system, neurological conditions, speech patterns or to predict the psychotic episodes. Many surgical robotics are being designed to assist clinical experts in surgical processes. In the prevailing diseases like pandemic, AI technology-based robots are used by various countries for medication and routine checkup purposes in order to reduce the chances of doctors being affected by the disease contact. However, in the existing crisis the role of AI has been limited since only limited countries were able to install the AI technology which has limited its impact in controlling the virus. Besides, the lack of data in providing the accurate predictions regarding the spread of disease was another major gap in reducing the overall impact of the disease. Overcoming these barriers and limitations are effective in developing the right balance between public health and data privacy leading towards the development of human based AI interactions. These gaps will likely to address the issues faced in the time of the present pandemic situation, as by gathering extensive data related to the infected population countries will be able to save thousands of lives, through prior preparations.

Abstract

Artificial Intelligence (AI) in the E-trade industry is being utilized by online retailers for giving visit bot administrations, dismembering customer comments, and for offering redid sorts of help to online clients.

In all honesty, a 2019 Impartial assessment found that 1 in every 5 clients are anxious to purchase products or organizations from a discussion bot, while 40% of the online clients are scanning for unfathomable offers and shopping deals from visit bots. While the overall Web-based business bargains are foreseen to contact \$4.8 billion continually in 2021, Gartner predicts that around 80% of all customer affiliations will be regulated by PC based insight headways (with no human expert) ceaselessly 2020.

Taking everything into account, how has Man-made mental aptitude in Online business changing or changing the shopping contribution with 2019? Through this part, we are going to highlight a segment of the noteworthy employments of man-made mental aptitude in Web-based business nearby a segment of the certifiable plans of action.

- Badawi S.
- Madbouly A.

Abstract

This paper aims to examine the influence of internet addiction in workplace on the performance of employees. Such internet addiction in workplace has proven to be a recent important phenomenon.

That is why many companies nowadays try to implement certain effective measures and regulations to prevent this internet usage within workplace to assure the good performance of their employees and to achieve customer satisfaction along with the good quality of the service provided.

In order to investigate this impact of internet addiction in workplace on the performance of employees, the researchers have decided to use the quantitative method, using the questionnaire tool, which is set to get answers to the research questions, Gathering all those results and analyzing the study findings, we understand that the internet addiction has a high effect on employee's productivity, as the results of the questionnaire shows big percentages that needs to be in consideration, it indicates that the majority spend more than 6 h on the internet seeking entertainment.

A Systematic Review On Medical Leadership In Hospital Setting

Authors

- AL-Hashimi N.M.
- AL-Hashimi M.

Abstract

Background and Objective: Medical leadership is conceptualized as the formal management governed by the physicians. This systematic review focuses on different conceptualizations related to medical leadership with respect to its activities and roles and types of medical leaders involved in it.

Methods: By undertaking PRISMA guidelines, this systematic review has searched for seven different databases to extract relevant publications on the subject of interest during the time period from February 1st 2017 to July 20th 2020. Finally, eight articles were selected that ranged from quantitative study design to systematic reviews.

Results: Total 685 articles were searched, out of which 432 articles were further proceeded and finally eight articles were selected. Majority of the studies were based on systematic reviews covering international context. Type 1 medical leadership was mostly reported in studies, which refers to physicians in current leadership role and are described as medical management or medical leadership.

Conclusion: This review paper has found different characteristics that are associated with the particular context in which a medical leader performs his or her role such as role ambiguity, lack of support and time and the presence of competing logics in hospitals.

The Implementation Of Artificial Intelligence In Social Media Marketing And Its Impact On Consumer Behavior: Evidence From Bahrain

Authors

- Albinali E.A.
- Hamdan A.

Abstract

Businesses and brands have taken advantage of social media to reach a wider market. AI has made it easier for businesses to know what people are talking about, what people want all thanks to AI's analysis on finding the most discussed about topics and summarizing it into trending lists to get a better understanding on consumer behaviors.

The aim of this research is to discuss how Artificial Intelligence is used in social media, as well as how can business use this information to market their products. This research will also answer the question Does AI have an impact on consumer behavior? To find help find the results the method used in this survey is a questioner.

At the end of this research the finding were they AI has an effect of consumer behavior.

Artificial Intelligence For Public Sector: Chatbots As A Customer Service Representative

Authors

- Adnan S.M.
- Hamdan A.
- Alareeni B.

Abstract

Many governments began to give customer service a major priority until they became competitive in some of the services provided by its various ministries, global profit companies, in terms of the way and quality of the service provided, depending on the integration of government systems, continuous training for customer service employees, as well as electronic transformation and the use of the latest technologies.

This chapter addresses the technologies used in government service centers, in particular artificial intelligence techniques, and on the feasibility of using the Chatbots and its benefits, how it works best to ensure its effectiveness in providing services, also about the role that can be played in providing its services in light of the Coronavirus pandemic outbreak, finally will try to answer the most important question whether can this technology replace the human customer services representative?

Abstract

The purpose of this paper is to review the definition of Financial Technology (FinTech) discipline from different perspectives and scholars. Moreover, the research will explore FinTech history and its evolution stages throughout the years based on existing literatures. In addition, it will present the different concepts and categories of FinTech. The research will also discuss FinTech implementation in the Kingdom of Bahrain and focus on women role within the FinTech, and the initiatives taken to empower women within the industry. The research is based on review of literatures and interviews to explore women role and achievements within Fintech in Bahrain, and it proposes recommendations for future thorough research.

- Elshaker A.H.

Abstract

The effect of Age, Liquidity, Leverage, Size, Industry and Profitability in listed firms in Bahrain bourse is examined in this research paper and machine learning regression techniques in Python programming analysis is adopted to measure the effect of these factors (Age, Liquidity, Leverage, Size, Industry and Profitability) on the Electronic Financial Disclosure (EFD) through the Website of each firm listed in Bahrain Bourse (BB).

Listed firms in Bahrain Bourse (BB) during 2017 is taken as sample size in this research. The main finding is that profitability factor is having highest impact on the level of Electronic Financial Disclosure (EFD) which has been tested and predicted using KNN, Polynomial, Multiple Linear Regression techniques.

The implication of this study helps firms in Bahrain to use machine learning techniques to predict the effect of the firm characteristics and the level of Financial Disclosure.

The Use Of Information Technology In Accounting Education, Evidence From Jordan

Authors

- Wadi R.M.A.
- Jaber R.J.

Abstract

The aim of this study is to clarify the importance of IT knowledge, IT techniques and IT skills in achieving the required knowledge for accounting students.

The researchers discussed an important topic; which is: What are the information technology skills and competencies required for accounting students in the pre-qualification stage; according to international standards. In general, the results showed the following:

- 1) Improving accounting education requires more improvements in terms of educators and strategies.
- 2) The International Education Practice Statement # 2 (IEPS 2) does not prescribe the specific IT knowledge and competences for the professional accountant.
- 3) IFAC emphasized that the professional accountant requires set of skills; such as; organization skills, technical skills, interpersonal skills, and other social skills.
- 4) This study showed some factors that hinder the bridge between accounting education and information technology in Jordan.

The Effect Of Cloud Computing On Organizational Flexibility

Authors

- Al-Sabbagh N.A.
- Al-Alawi M.

Abstract

Cloud computing adoption behavior varies from country to country, and people become disparate to its benefits from it. This research looks at the adoption factors of cloud computing in the Gulf region and their effectiveness on organization's flexibility, organization to organization activities, knowledge management applications, and organizational behavior.

The flexibility has been presented in the form of performance and process in the Gulf market. A qualitative study was used to build a model that measures the relation between two flexibility aspects, in connection with the cloud computing adoption factors: relative advantage, security concerns, vendor credibility, ease of use, organizations resistance.

A live cloud portal was built for this experiment instrumenting Microsoft office cloud solutions. A total of 30 respondents participated in this study using a convenience sampling method. Pearson's correlation and multiple regression analysis were used to examine the relationship between IT flexibility dimensions, specific to cloud computing (relative advantage, security concerns, vendor credibility, ease of use and organizations resistance).

Toward Successful Social Media Viral Marketing: A Knowledge Management Approach

Authors

- Abbas A.A.
- Badawi S.
- Almahdi M.H.

Abstract

The purpose of this paper is to investigate the determinants that lead organizations to go viral through knowledge management (KM). KM has been widely recognized as a main driver of competitive advantage, as well as of the success of the organization. Indeed, the significance of knowledge on organizational activities has increased dramatically within the economical era and researchers believe that KM is an important organizational resource to enhance firms' competitive capabilities.

Moreover, many recent studies have pointed out the importance of social media as a competitive marketing tool, as it creates a platform of true interactivity. Viral marketing (VM) on social media refers to the dissemination of specific content or material about an organization or product by individuals through social media. Viral campaigns are considered to have many advantages over traditional media campaigns, particularly in respect to reach and cost-effectiveness.

Consequently, VM has attracted the attention of marketers and researchers who are seeking to identify the characteristics of knowledge and information shared online and what leads to the customers' sharing behavior via social media.

This paper and its conclusion will add to this body of research by filling the aforementioned gap in the literature, namely by exploring the firms' determinants of achieving viral status on digital platforms in Bahrain. This paper also points out the limitations and possible directions of future research.

- Alareeni B.

Abstract

This study aims to identify the role of media campaigns factors to combat Corona Virus (COVID-19) in the Kingdom of Bahrain applying to a simple random sample of 250 through questionnaire tool.

The results showed the campaigns focused on many ways to prevent the disease, namely: washing hands frequently with soap and water, using disinfectants to clean the house, using tissues when coughing or sneezing, ventilating the house constantly the campaigns showed also many indicators of Corona Virus infection such as high temperature in all body parts, and severe coughing.

Energy Management Based On Internet Of Things

Authors

- Alsaeedi M.
- Ali B.
- Mazzuchi T.

Abstract

The Internet of Things (IoT) is a fast-growing reality with tremendous physical entities connected to the internet. Energy management through IoT is one of the recent efficient applications of it.

This research analyses the energy management based on IoT technology for AC control for a residential unit. It shows the management capabilities of a smart home AC system as well as an estimation of the savings in terms of power consumed and cost.

It is found that there is a 29% decrease in energy consumption when the smart AC system acts to manage the power consumption of the units in the home. As a result, significant financial benefit is achieved.

Evaluation Of Compatibility Of Cloud-Based Applications, Credibility, And Trust Perceptions On The Adoption Of Cloud Technology: A Review

Authors

- Sarea A.
- Taufiq-Hail G.A.-M.

Abstract

This paper aims to review the influence of credibility on trust, which received scant attention in academia, especially in cloud computing, and to review role of trust and credibility to form the attitude towards the adoption of SaaS services. Also, as a second objective, the compatibility of the services perceived is reviewed against the intention to adopt SaaS services.

The study contributes to literature knowledge by offering valuable insights and tests relationships that received scant attention. The findings are essential to decision-makers in government or private sectors, business entities, and SaaS cloud computing providers.

About The Arabic Media Language: Interfere With Controversy And Dialogue

Authors

- Mseer I.N.

Abstract

The information flow of the world today, and the tremendous development of the media, have made media the most intense and volatile.

It is no longer useful to talk about separation or even a unique role for a newspaper, television channel, or radio station. In particular, the technologies and software have joined forces and even produced a complex mix of confusing communication situations that need to be reinterpreted and interpreted.

But the ruling conditions make us in the direst need to reproduce the structuralism arguments, which disrupted the work and became an old methodological legacy. Simultaneously, the situation in the field of media in the Arab world continued until the need arose to search in the current structure of Arab media.

It is essential to look at the relationship between the elements that make up the media structure and the importance of monitoring the conditions under which the media live.

Abstract

Collaborative and social media SaaS cloud services emerged as one promising technology to meet the demand of high connectivity, collaboration, and reliability, while achieving cost-effective solutions.

However, scarcity of empirical works has been devoted to the higher education sector represented by the millennials at university campus.

This work tries to fill this gap and proposes an integrated model of Theory of Planned Behaviour (TPB) and Technology Acceptance Model (TAM) to understand the dominant factors of the adoption of the collaborative and social media that are cloud-based services and applications.

The purpose of the study is to formulate the conceptual model: A review of the literature.

Sentiment Analysis Of Arabic Sequential Data Using Traditional And Deep Learning: A Review

<div>Authors</div> <div><div><div></div><div>Omran T.M.</div></div><div><div></div><div>Sharef B.T.</div></div><div><div></div><div>Grosan C.</div></div></div>

Abstract

With the emergence of social media and review sites peoples express their opinions toward entities, generating a huge amount of data or what is called big data that comes in non structured form of sequential data such as tweets or reviews. The availability of big data leads to the excitement in Artificial Intelligence and many applications such as Sentiment Analysis (SA).

Although many studies conducted in SA, however majority of them focused on English, while that consider the Arabic one are very limited due to many challenges like variation of dialects, morphological attributes, and the lack of Arabic sources and corpora, despite the spread of the Arabic language and its frequent use in social media. The objective of this review is to highlight different studies of Arabic sequential data that utilized traditional and deep learning techniques.

Ethics Of Artificial Intelligence And The Spirit Of Humanity

<div>Authors</div> <div><div><div></div><div>Mseer I.N.</div></div></div>

Abstract

The present world is experiencing the manifestations of the Fourth Industrial Revolution and the emergence of artificial intelligence products. Those that a person interacts with directly after the smartphone created an overall invasion of social, political, economic, and cultural details. The reality is that the achievements of artificial intelligence are not considered something new, but rather have their roots and important efforts.

This was the subject of many projects affecting the directions of companies, giant institutions, and laboratories, while the attention and direct interest and care for it come from the nature of the relationship that has been growing between the ordinary person and the overall smartphone programs, which have been testing the trust in this relationship daily between a smart machine and a human.

The study tries to focus on tracking the outcome of this relationship, especially on the moral level, so that the orientation is towards launching the most present question, which is related to who affects whom?

The current reality indicates that the main influencer is based on the decisive human role in directing, managing, and programming the smart machine. Rather, the intelligence of the machine up to this point is based on the metaphor, given that the smartphone reflects the intelligence that has been reached by man, through the course of his technological development through history.

Dynamic Directional Routing For Mobile Wireless Sensor Networks

<div>Authors</div> <div><div><div></div><div>Almesaeed R.</div></div><div><div></div><div>Jedidi A.</div></div></div>	<div>Abstract</div> <div><p>The interest in Mobile Wireless Sensor Networks (MWSN) has grown considerably due to its various applications in the fields of military, industrial infrastructure, automation, health, traffic, and many consumer areas. Hence, as the modern world shifting to the age of IoT with possibly new emerging technologies and applications, there will be a number of implications that influence the design and deployment of such networks.</p><p>Precisely, residual energy utilization, mobility, topology, scalability, and data routing are key factors in the design of MWSN to meet application's specific demand. This article presents a novel routing protocol that adapt to the mobility of sensor nodes to achieve a reliable and energy-efficient routing.</p><p>The proposed scheme is dynamic directional routing (DDR) to control the flow of data in network, which optimizes the routes toward the sink. The protocol has been evaluated and compared with state-of-art protocols, and the simulation results show that DDR protocol can improve network lifetime by around 13% compared to T-LEACH protocol. It also enhances the packet delivery rate, energy consumption, while maintain shorter routes toward the sink by around 33% compared to T-LEACH protocol.</p><p>© 2020 Elsevier B.V</p></div>

Artificial Intelligence Based Multinational Corporate Model For Ehr Interoperability On An E-Health Platform

Authors

- Razzaque A.
- Hamdan A.

Abstract

This study explores the improvement of efficiency in e-Health by standardizing access to electronic health records (EHRs). Without overlaid organizations, EHR will remain an uneven and fragmented network of lagging systems unable to achieve accuracy and consistency, thus efficiencies.

A multinational corporation (MNC) model is proposed to reduce healthcare costs, and implement a coherent system where data, technology and training are uniformly upgraded to alleviate interoperability issues.

The conclusion revealed from our review of literature suggests that EHR interoperability issues may be mitigated by creating common architectures that enable fragmented systems to interoperate under supra organizations.

As a result, an Artificial Intelligence based model is proposed to facilitate the improvement of the efficacy of e-Health to standardize HER.

A Study On Risk Management Practices In Online Banking In Bahrain

Authors

- Al-Ajmi A.S.
- Kukreja G.
- Sarkani S.

Abstract

One of the most significant technological advances that has influenced banking practices in recent years is online banking services.

Those services creates the risks that banks should be aware of, and therefore should implement very strict measures of risk management, which made Basel come up with a framework of principles to successfully mitigate and deal with online banking risks.

Hence, the Researchers conducted this research to study risk management in online banking in the Kingdom of Bahrain in terms of the framework provided by Basel and investigate the extent to which they applying these principles, as well as discover the perception of banks on risks associated with online banking.

The Researchers conducted a semi-structure interview as a pilot study with three risks managers in various banks in Bahrain to be provided with an in-depth picture about risk management related to online banking.

Moreover, a survey questionnaire was developed and distributed to nine commercial banks in Bahrain to investigate and determine their application of the 14 principles of online banking risk management by Basel. Results show that banks in Kingdom of Bahrain are working well in terms of the principles, as they have a very positive understanding of risk management and risks imposed by online banking.

The Effectiveness Of Renewable Energies Projects In Kuwait—Paaet Solar Energy Project

Authors

- Alhajeri M.
- Ramez W.

Abstract

In Kuwait, 70% of electricity is generated from oil power station where the total irradiation on a plane equals 1891 kWh/m2/year and the average monthly temperature rises about 42.3 °C, so the solar energy can be considered as a main renewable source of energy in Kuwait. 70% of produced energy is used in air conditioning and other services for households, while the commercial sector consumes only 30% of the produced electricity (42.58 billion kWh in 2010).

The Public Authority for Applied Sciences and Training (PAAET) started to design Kuwait’s first solar energy station, and this project is supported by Pan Arab Consulting Engineers (PACE) and was proposed to cover 17,542 m2 with a total proposed production of 2046 MWh/Year. This research report discusses the proposed design in order to find the main problems causing low performance, especially the dust and the long period to get rate of return.

A set of recommendation was listed.

The Adopting Knowledge Management Proves Vital For Bahrain’s Governmental Sector

Authors

- Showaiter A.
- Razzaque A.
- Hamdan A.

Abstract

This study sheds light on how the knowledge management (KM) revolution contributed in evolving the governmental performance in Bahrain since few decades.

The study was essential to contribute to the limited literature and establish possible contributions that KM has made in the government sector in Bahrain. Hence, a quantitative research followed an adopted survey; piloted through a non-structured in-depth interview, for testing the credibility of this study’s adopted framework. The collected data was analyzed and revealed that KM in Bahrain was at 50%, though such initiatives significantly affect innovation.

In terms of responsiveness, this study found out that those who recorded less information retrieval time had also recorded a high maturity level, and that KM was found to be significant in supporting Bahrain vision 2030. In this vein, the study revealed a strong correlation between competitiveness and KM, since KM enhances management of human capital, vital for Bahrain’s economy.

Precisely, the study confirmed that a knowledge creation and management lead to economic transformation from the traditional to a knowledge-based sector. Study recommendations aim for the government to plan for the upcoming organizations amidst stiff competition.

The Effect Of Real-Time Feedback On Consumer's Behavior In The Energy Management Sector: Empirical Study

<div>Authors</div> <div><ul style="list-style-type: none">Nabeel M.Ali B.Hamdan A.</div>	<div>Abstract</div> <div><p>Despite efforts exerted by the Electricity and Water Authority of the Kingdom of Bahrain (EWA), the Kingdom has one of the highest energy consumptions per capita at a rate of 11,500 kWh as of 2017.</p><p>The rate is estimated to increase by 6–8% a year. The drop in oil prices has led to an increase in electricity prices in the Kingdom, which directly impacted the consumers. This in turn has opened doors for research in the domain of energy conservation.</p><p>One way to achieve energy conservation is by avoiding energy-wasting behaviors and habits. In the modern era of information-based decision making, feedback technologies have shown a great potential in reducing energy consumption. Up to 20% reduction has been reported with the latest advancements in the feedback technology.</p><p>In this study, an experiment was conducted by installing feedback devices in five different houses. In the first 20 days, the participants were only educated on electricity saving practices recommended by EWA and were not given access to feedback displays.</p><p>This was done to monitor their regular electricity consumption behavior using the same devices to ensure accuracy. In the second phase of the experiment, participants were provided with access to the feedback monitors with displays real-time consumption information. Consumption data of the 5 houses were recorded and analyzed.</p></div>

Data Mining Model For Better Admissions In Higher Educational Institutions (HEIS)—A Case Study Of Bahrain

Authors

- Bhaskaran S.S.
- Aali M.A.

Abstract

Data mining has been used for a variety of objectives for improving the quality of higher education institutions and especially for improving students' performance and institution quality.

The use of data mining for assessing prior learning and for improving the admission criteria has not been addressed extensively. Guiding applicants to select the correct and most suitable degree based on their prior learning at their previous institution is of great importance.

We present in this paper our approach of using data mining for guiding applicants to decide the correct and most suitable degree based on their prior learning at their previous institution, and the results demonstrate the success of this method and confirm the expected benefits for the students and the institutions.

The C4.5 decision tree algorithm is applied on successfully graduated student's prior learning data along with the GPA and programme in HEI in order to predict the programme of new applicants/students of similar prior learning characteristics.

The outcome of the decision tree predicted the list of appropriate programmes with the GPA expected if registered in that programme, for the applicants from similar prior learning attributes.

The decision rules present a list of choices of programmes to which new students can enrol with a hint of the success level expected in terms of GPA, which gives a forecast/projection on the success level that can be expected at the end of the study tenure.

- Ziani A.-K.

Abstract

Social media has integrated into traditional TV that has improved the learning, entertainment and communication process.

Social TV is a new learning and connectivity aspect using interactive media platforms. This study highlights the impact of STV on students’ AP in Jordan using a quantitative approach and a selected sample (n=516) of university students.

The findings revealed a robust and significant relationship between STV and students’ AP. STV has significantly improved their interaction and learning experiences. They were capable of learning new things from watching STV and shared their experiences with others through online platforms.

The study proposed a research model and assessed it using the PLS-SEM technique.

Abstract

YouTube has become a vital platform, amongst other social-media sites, especially in e-learning/selflearning and in the unforeseen time of COVID-19.

This study explores the influence of YouTube videos on users’ behavioral intention regarding e-learning acceptance and their perceptions through targeting online university students (n=180) in Jordan, using the PLS-SEM procedure through SmartPLS software. The findings indicated that users’ behavioral intention to adopt new e-learning was positively influenced by performance expectancy, perceived usefulness and ease-of-use.

The findings were presented and discussed in relation to the Technology Acceptance Model (TAM) and UTATU frameworks.

ESG Impact On Performance Of US S&P 500-Listed Firms

<div>Authors</div> <div><ul style="list-style-type: none">Alareeni B.A.Hamdan A.</div>	<div>Abstract</div> <div><p>Purpose: This paper aims to investigate whether there are relationships among corporate disclosure of environmental, social and governance (ESG) and firms’ operational (ROA), financial (ROE) and market performance (Tobin’s Q), and if these relationships are positives or negatives or even neutral.</p><p>Design/methodology/approach: The study sample covers US S&P 500-listed companies during the period 2009 to 2018. Panel regression analysis was used to examine the study hypotheses and achieve the study aims.</p><p>Findings: The results showed that ESG disclosure positively affects a firms’ performance measures. However, measuring ESG sub-components separately showed that environmental (EVN) and corporate social responsibility (CSR) disclosure is negatively associated with ROA and ROE. EVN and CSR disclosure is positively related to Tobin’s Q. Further, corporate governance (CG) disclosure is positively related to ROA and Tobin’s Q, and negatively related to ROE. More importantly, ESG, CSR, EVN and CG tend to be higher with firms that have high assets and high financial leverage. Furthermore, the higher level of ESG, EVN, CSR and CG disclosure, the higher the ROA and ROE.</p><p>Originality/value: The study limns a vision of the role of ESG on firm performance. This study tries to determine whether there are relationships among all ESG disclosure and FP, and if they are positive, negative or even neutral.</p><p>© 2020, Emerald Publishing Limited</p></div>

Abstract

This study aims to illustrate the impact of adopting Regulatory technology (RegTech) innovations in banks on money laundering prevention effectiveness using Bahrain as a case study.

Bahrain has strived to position itself as the banking center of the Arabian Gulf, hence the results of this novel research are informative of the practices in the region. The primary data for this study was collected through a survey instrument distributed to 100 bankers working in Bahrain with expertise in compliance.

The results of multivariate analysis indicate that transactions monitoring through RegTech and cost- and time-saving aspects of RegTech, drive money laundering prevention effectiveness to a highly statistically significant extent.

However, electronic know your customer (KYC) technologies are insignificant as drivers. This research not only sheds light on the efficacy of RegTech but also raises general awareness concerning the adoption and integration of RegTech platforms for fighting money laundering. In particular, the findings provide specific insights about the deployment of RegTech capabilities in banks in regional banking centers of modest scale..

Corporate Social Responsibility Disclosure And Firms’ Performance In Mediterranean Countries: A Stakeholders’ Perspective

Authors

- Buallay A.
- Kukreja G.
- Aldhaen E.
- Al Mubarak M.
- Hamdan A.M.

Abstract

Purpose: The purpose of this study is to investigate the relationship between corporate social responsibility (CSR) disclosure and firms’ operational, financial and market performance (measured in the form of return on assets (ROA), return on equity (ROE) and Tobin’s Q (TQ), respectively) in the Mediterranean countries from a stakeholder perspective.

Design/methodology/approach: Research is quantitative in nature, based on a cross-sectional and time-series analysis of 203 firms listed in six Mediterranean countries for 10 years from 2008 to 2017, with 1,689 observations. The theoretical model is built on a stakeholder theory. The practical model is built on the independent variable (CSR) and the dependent variables ROA, ROE and TQ.

Findings: The findings deduced from the empirical results indicated that CSR disclosure negatively affects operational and market performance but does not affect financial performance.

Practical implications: Studying the relationship between CSR disclosure and firms’ operational, financial and market performance, with the consideration of variations, can bring many benefits internally by being more conscious of important activities that should be undertaken and externally by detecting what regulators and other stakeholders want for better sustainable development.

Adoption Of Fintech By Students In Higher Education Institutions

Authors <ul style="list-style-type: none">Traif S.E.Alshihabi I.E.Ajlan A.Bubshait A.Razzaque A.

Abstract

Financial technology is encouraging various new practices, such as diminishing of the use of cash in different countries, increasing the rate of use of mobile payments, introducing new algorithms for high-frequency trading across national boundaries, etc., hence attracting significant attention.

However, the continues use of fintech is still doubted by scholars. As a result, this chapter aims to comprehend whether, and why, higher education students, who are future entrepreneurs, would be willing, or hesitate to utilize fintech.

Data was collected from 350 higher education students from universities in Bahrain. Only those students who had prior experience with cashless online payment systems were the selected target population for this study's online survey.

The findings confirmed that risk negatively effects the intent for the continece of using fintech, and convenience baring the strongest positive effect. This study contributes to theoretical and practical implications for future and budding entrepreneurs graduating from the higher education sector of Bahrain.

Abstract

FinTech is encouraging various new practices, such as diminishing the use of cash in different countries, increasing rate of mobile payments, and introducing new algorithms for high-frequency trading across national boundaries.

It is paving the way for new technologies emerging in the information technology scene that allow financial service firms to automate existing business processes and offer new products, including crowdfunding or peer-to-peer insurance.

These new products cater to hybrid client interaction and customer self-services, changing the ecosystem by increasing outsourcing for focused specialization by resizing and leading to new ecosystems and new regulations for encouraging FinTech.

However, such new ecosystems are also accompanied by new challenges. Innovative Strategies for Implementing FinTech in Banking provides emerging research exploring the theoretical and practical aspects of technology inclusion in the financial sector and applications within global financing.

It provides a clear direction for the effective implementation of FinTech initiatives/ programs for improving banking financial processes, financial organizational learning, and performance excellence.

Featuring coverage on a broad range of topics such as artificial intelligence, social financing, and customer satisfaction, this book encourages the management of the financial industry to take a proactive attitude toward FinTech, resulting in a better decision-making capability that will support financial organizations in their journey towards becoming FinTech-based organizations.

When Technology Meets Finance: A Review Approach To Fintech

<div>Authors</div> <div><div><div></div><div>Albastaki Y.A.</div></div></div>

Abstract

There is a paradigm shift in the financial services industry. Combined with ever-changing customer expectations and preferences, emerging technologies such as artificial intelligence (AI), machine learning, the internet of things (IoT), and blockchain are redefining how financial institutions deliver services. It is an enormous task to remain competitive in this ever-changing environment.

Financial institutions see FinTech as a major part of the digital future, and as proof of this, since 2015, financial institutions have invested over US\$ 27 billion in FinTech and digital innovation. This chapter is an introductory chapter that explores FinTech in the literature. It focuses on how FinTech is reshaping the financial industry by describing FinTech phases and development process.

The financial products and services using FinTech are also described with a highlight on Islamic FinTech. The chapter finally concludes by describing the future of FinTech.

Investigation Of Factors Affecting Adoption Of Fintech In Financial Institutions

Authors <ul style="list-style-type: none">Bhaskaran S.S.	Abstract <p>FinTech, a compound term for financial technology, signifies the usage of technology to provide financial assistance. Ever since its evolution FinTech has been growing tremendously, despite its positive and negative aspects.</p> <p>In the literature review, there are many factors affecting the adoption of FinTech. It was found that the ease of use of technology (Technology Acceptance Theory), investment decisions in crowdfunding (Decision Theory), and the risks involved in the adoption of FinTech (Prospect Theory) are the main factors that might affect the adoption of FinTech.</p> <p>However, there is a paucity of studies linking all these factors in the adoption of FinTech using these theories. This research project investigates the influence of these factors in the adoption of FinTech. In order to analyze these factors, a questionnaire was used.</p> <p>As a result, it was found that there is a positive relationship between the ease of use and FinTech's adoption; between FinTech's adoption and investment decisions in crowdfunding and between the level of risks when adapting to FinTech.</p> <p>© 2021, IGI Global</p>

On An M/G/1 Queue Providing General First Essential Service With Customer’s Choice For General Or Deterministic Second Optional Service

Authors

- Madan K.C.

Abstract

We study an M/G/1 queuing system with one by one Poisson arrivals and one by one general first essential service followed by one of the two types of second optional heterogeneous services. A customer entering the service channel compulsorily goes through first essential service.

After completion of the first service, the customer has the option to take a second optional service with probability π or no second optional service with probability $1-\pi$. If the customer decides to take the second optional service, he may take a general second optional service with probability a_1 or a deterministic second optional service with probability a_2 , $a_1 + a_2 = 1$.

We find steady state solution in terms of the generating function of the queue length as well as the explicit steady state probabilities for various states of the system. Results for a few interesting special cases are derived.

Does It Pay To Be Socially Responsible? Empirical Evidence From The Gcc Countries

Authors

- Musleh Alsartawi A.

Abstract

Purpose: This study aims to examine the relationship between corporate social responsibility (CSR) and the financial performance (profitability and market value) of firms listed in the Gulf Cooperation Council (GCC) countries' stock markets.

Design/methodology/approach: The sample of the study consisted of all the listed companies in the GCC bourses for the period of 2010-2017. CSR was calculated by using the total amount of donations and charity disclosed in the financial reports. The three performance proxies used as the dependent variables included return on assets (ROA; profitability), return on equity (ROE; profitability) and Tobin's Q (market value).

Findings: This study found that the UAE had the highest level of CSR compared to the other GCC countries. Additionally, the findings showed a negative and significant relationship between CSR and ROA, and a positive and significant relationship between CSR and Tobin's Q.

Practical implications: In addition to other reforms, this paper recommends the GCC governments to impose a CSR framework and SMART platforms in line with the UAE's initiatives.

Originality/value: This paper offers new contributions to the GCC literature and recommendations to their firms and governments.

Impact Of Zakat On Sustainable Economic Development

Authors
<div><div></div><div>Sarea A.</div></div>

Abstract

Zakat, a religious obligation in the form of almsgiving, is highly important both in Islam and in the Islamic economy.

As Muslim communities face financial hardships around the world, Zakat has emerged as a vital component within these communities and could play a major role in sustainable economic development by helping society to alleviate poverty and promote social equality.

Impact of Zakat on Sustainable Economic Development is a pivotal reference source that contributes practical solutions and knowledge production in alleviating poverty in Muslim countries by adopting Islamic approaches to contemporary socio-economics and the importance of Zakat in sustaining development and supporting the welfare of society.

Featuring coverage on a wide range of topics such as corporate governance, ethics, and sustainable economic development, this book is ideally designed for economists, government officials, regulators, entrepreneurs, financial professionals, religious authorities, researchers, academicians, and students at the postgraduate level.

Liner And Nonliner Sectoral Response Of Stock Markets To Oil Price Movements: The Case Of Saudi Arabia

<div>Authors</div> <div><div><div></div><div>Hamdan R.K.</div></div><div><div></div><div>Hamdan A.M.</div></div></div>	<div>Abstract</div> <div><p>With respect to Saudi Arabia for the period 2007–2016, this study employs linear (ordinary least square and causality tests) and nonlinear (Markov switching technique) to determine the long-run relationship between stock market returns, in aggregate, and oil prices, as independent variable on the one hand, with sectoral returns in stock markets, and as dependent variable on the other. Results suggest that sectors in the Saudi market generally respond asymmetrically to oil prices.</p><p>Overall, in the long run, the Saudi market, in aggregate, was found to be cointegrated with sectoral returns being affected more by overall stock market returns than by oil returns.</p><p>When nonlinear Markov switching technique was employed, results were only significant in certain sectors namely cement, petrochemical industries, building and construction, and energy and utilities where regime switching between high and low volatilities was detected around the global financial crisis in 2008.</p><p>Based on these findings, the study recommends investors to consider investing in sectors that balance between those with returns that vary directly and inversely with oil prices in an effort to create “oil-neutral” portfolios rather than uniformly investing across all sectors in the Saudi market or consider investing in Saudi market sectors in the case of high oil prices.</p><p>© 2019 John Wiley & Sons, Ltd</p></div>

Shariah Disclosure And The Performance Of Islamic Financial Institutions

<div>Authors</div> <div><div><ul style="list-style-type: none">Musleh Al-Sartawi A.M.A.</div></div>	<div>Abstract</div> <div><p>Manuscript type: Research paper</p><p>Research aims: This study aims to shed light on the relationship between Shariah disclosure and the performance (social performance and firm value) of listed Islamic financial institutions in the Gulf Cooperation Council (GCC) countries.</p><p>Design/Methodology/Approach: A checklist based on Islamic standard setters that is based on previous disclosure studies is developed to gauge the level of Shariah disclosures. Data are gathered from the annual reports of the Islamic financial institutions (IFIs) in the GCC for the year ending 2017.</p><p>Research findings: The findings show a negative and significant relationship between Shariah disclosure and social performance; they also show a positive and insignificant relationship with Tobin's Q. This outcome could be attributed to the corporate social responsibility (CSR) activities which create financial burdens for the IFIs. With high levels of disclosure, there is a trade-off between the two.</p><p>Theoretical contribution/Originality: This paper contributes to literature by developing a new disclosure index based on the Shariah perspective in relation to CSR engagement of the IFIs. The findings are noteworthy to the IFIs since CSR practices need to be entrenched into the working practices. They are also expected to generate positive contributions to the social good of the Islamic society, thereby fulfilling justice and equality in lieu of the Islamic concepts.</p><p>Practitioner/Policy implication: From a more practical perspective, this study is useful to regulators and policy makers who wish to incorporate CSR into their Shariah-compliant policies.</p></div>

The Efficiency Of GCC Banks: The Role Of Intellectual Capital

Authors <ul style="list-style-type: none">Buallay A.Hamdan A.M.Reyad S.Badawi S.Madbouly A.	Abstract <p>Purpose: This study aims to examine the impact of intellectual capital (IC) efficiency on bank's operational, financial and market performance.</p> <p>Design/methodology/approach: The study examined 59 banks for 5 years to ends up with 295 observations. The independent variable is the modified value added IC component; the dependent variables are performance indicators (return on assets [ROA], return on equity [ROE] and Tobin's Q [TQ]).</p> <p>Findings: The findings deduced from the empirical results demonstrate that there is a positive relationship between intellectual capital efficiency and financial performance (ROE) and market performance (TQ).</p> <p>Originality/value: The results of this study may give a wake-up call for banks to examine the reasons of imperfect relationship between the IC and asset efficiency (ROA).</p> <p>© 2020, Emerald Publishing Limited</p>

The Role Of Audit Committee Attributes In Corporate Sustainability Reporting: Evidence From Banks In The Gulf Cooperation Council

<div>Authors</div> <div><ul style="list-style-type: none">Buallay A.Al-Ajmi J.</div>	<div>Abstract</div> <div><p>Purpose: The purpose of this paper is to analyze the extent to which sustainability reporting by banks in the Gulf Cooperation Council (GCC) is affected by the attributes of audit committees.</p><p>Design/methodology/approach: The research is positivist and quantitative, based on a cross-sectional and time series analysis of 59 banks from 2013 to 2017. A multivariate model is used to investigate the impact of selected audit committee attributes (financial expertise, size, members' independence and meeting frequency) on sustainability reporting. The model is built on agency, legitimacy, resources and stakeholders theories.</p><p>Findings: In contrast to the hypothesis, the authors report a negative association between financial expertise and sustainability reporting. Members' independence and meeting frequency play a positive role in determining the extent of disclosure. The control variables (bank size, age and auditor type) are positively associated with corporate sustainability reporting.</p><p>Research limitations/implications: The main limitations of this study are related to the chosen attributes of audit committee and do not consider the board's attributes. However, the authors believe these limitations do not affect the findings. Future research that includes more attributes when they became available will offer more insights into the role of audit committees on sustainability disclosure of financial institutions. Overcoming these limitations may make the results more generalizable.</p><p>Practical implications: The results of this study have important implications for regulators, bank management, investors and creditors. For regulators, in the countries of the GCC and in countries like them, the findings reveal the importance of disclosure requirements. The development of disclosure requirements is likely to improve corporate sustainability reporting and reduce variations in the extent of disclosure among banks. Banks could use these results to improve their reporting to outsiders. For creditors and investors, the study improves their awareness of the importance of corporate social responsibility, corporate governance and environmental information on credit and investment decisions and encourages banks to improve their disclosures of non-financial information.</p><p>Originality/value: This research makes a contribution to the scarce literature on sustainability reporting by banks, especially in an environment where capital markets lack active institutional investors, where regulators play the dominant role in determining the extent of disclosure and where banks are the main source of external finance for the corporate sector.</p><div>© 2019, Emerald Publishing Limited</div></div>

Sustainability Reporting And Performance Of MENA Banks: Is There A Trade-Off?

<div>Authors</div> <div><div><ul style="list-style-type: none">Buallay A.Fadel S.M.Al-Ajmi J.Y.Saudagaran S.</div></div>	<div>Abstract</div> <div><p>Purpose: Sustainability reporting has been widely adopted by firms worldwide given stakeholders' need for more transparency on environmental, social and governance (ESG) issues. This study aims to investigate the relationship between ESG and bank’s operational (return on assets [ROA]), financial (return on equity [ROE]) and market performance (Tobin's Q) in a group of emerging countries in the Middle East and North Africa (MENA) region.</p><p>Design/methodology/approach: This study examines 59 banks listed on the stock exchanges of MENA countries over a period of 10 years (2008-2017). Only conventional banks with all data for at least two years are included in the sample. The core independent variable is ESG scores, and the dependent variables are ROA, ROE and Tobin's Q. This study uses bank- and country-specific control variables to measure the relationship between sustainability reporting and bank's performance.</p><p>Findings: The findings from the empirical results demonstrate a significant positive impact of ESG on performance and economic benefits to shareholders. However, the relationship between ESG disclosures varies individually; unlike the majority of published research, the authors found that social performance plays a negative role in determining bank’s profitability and value. Furthermore, the authors present evidence in support of the impact of bank- and country-specific factors in determining bank’s performance.</p></div>

Assessing The Impact Of Entrepreneurial Skills Development On Self-Employment Practices Amongst Egyptian And Bahraini Accounting Students In Public And Private Universities

<div>Authors</div> <div><div><div></div><div>Reyad S.</div></div><div><div></div><div>Badawi S.</div></div><div><div></div><div>Hamdan A.</div></div></div>	<div>Abstract</div> <div><p>Purpose: The purpose of this paper examines the development of entrepreneurial skills amongst accounting students in public and private universities and its impact on career pathways, including self-employment. Also, the paper explores what skills have an effect on self-employment intentions.</p><p>Design/Methodology/approach: This study uses a quantitative approach to measure the entrepreneurial skills developed by accounting students in business schools and whether these skills direct them to choose to start their own business. A questionnaire was developed and a sample of 583 Egyptian and Bahraini accounting students was used.</p><p>Findings: The study concludes that in private universities, there is no difference in the development of entrepreneurial skills and subsequent self-employment practices between students in Egypt and Bahrain. When it comes to public universities, students in Bahrain develop better entrepreneurial skills and subsequent self-employment practices than students in Egypt. In addition, private universities are better than public universities in representing the relationship between entrepreneurial skills and self-employment practices.</p></div>

M-Learning Improves Knowledge Sharing Over E-Learning Platforms To Build Higher Education Students’ Social Capital

Authors

- Razzaque A.

Abstract

The education sector is transforming from e-learning to m-learning due to its motivation capabilities that drive students toward self-motivated learning.

However, this requires online participation through quality knowledge sharing (KS) of the social capital (SC) of resources. Past-reported low student participation calls for confirming whether social capital affects KS in m-learning.

Scholars assessed this effect—however, not in the education sector—and revealed scant clarification of whether m-learning regulates SC through KS.

Hence, this is the motivated aim reflected through a conceptual framework, that is, tested using multiple-regression analysis after collecting data from 334 Ahlia University undergraduate business students.

The results confirm that m-learning moderates students’ SC through KS in e-/m-learning on Moodle. Implications for theory, practice, and society are revealed in this article.

Abstract

Background: Some studies assessed the effect of aerobic exercise on diabetic obese patients with hepatic disease, while very limited studies compared high-intensity interval (HII) versus moderate-intensity continuous (MIC) on diabetic obese patients with non-alcoholic fatty liver disease (NAFLD).

Objectives: This study was designed to assess the effects of HII versus MIC on intrahepatic triglycerides (IHTG) and visceral lipids in diabetic obese patients with NAFLD.Design:Randomized controlled trial.

Methods: Forty-seven diabetic obese individuals with NAFLD were enrolled in this study. The individuals were randomly divided into 16 in HII group, 15 in MIC group, and 16 in the controls. HII group received HII exercise, MIC group received 8-week MIC exercise while the control group did not receive any exercise intervention. IHTG and visceral lipids were assessed pre- and post-intervention.

Results: Baseline and clinical characteristics showed nonsignificant difference among the 3 groups (P>.05).

Management Of Undergraduate Community-Based Rehabilitation Programmes In The Philippines: A Cross-Sectional Survey

Authors <ul style="list-style-type: none">• Trinidad P.B.• Shibu L.M.• Caballero N.R.• Rajab E.	Abstract <p>Purpose: The survey aimed to identify common strengths and weaknesses regarding the characteristics, management and implementation of Community-Based Rehabilitation (CBR) training in the undergraduate curriculum of Schools of Physical Therapy in the Philippines, and make recommendations for improvement.</p> <p>Method: A survey was conducted with the academic heads of CBR departments in 10 Physical Therapy schools. The institutions were selected through cluster sampling according to regional location. Nine of these were private institutions. Data was collected through a 24-item self-assessment survey distributed to the heads of the participating colleges /departments.</p> <p>Results: A number of strengths and weaknesses were identified.</p> <p>The strengths were: all schools had alto 2-month clinical CBR course integrated into their undergraduate curriculum; CBR courses were supported by a course syllabus, learning outcomes, student assessment and clinical training manual; 80% of institutions had implementing policies and guidelines governing management of the CBR programme(s); at least one physiotherapist was involved in the management of the CBR programme(s); and, CBR activities were delivered in coordination with key stakeholders management, with emphasis on delivery of physical therapy services, disability prevention, health education, participation of persons with disabilities and community awareness.</p> <p>The weaknesses were: no head/programme coordinator for 30% of CBR programmes; 40% did not have clinical coordinators as designated management positions in the CBR programme; only 50% of academic staff received formal CBR training, of which 80% was provided through CBR summits and professional interaction with other physical therapists; and, only 50% of schools adopted a multidisciplinary approach to service delivery which was focused on the Health domain of the CBR Matrix.</p> <p>Conclusion: The CBR component of the undergraduate physical therapy curriculum in the Philippines can be improved. A shift in the teaching to transdisciplinary care and inter-professional learning is recommended. Regular review of the CBR indicators should be done by the schools, including the key stakeholders. Challenges for CBR implementation were recruitment of community volunteers as CBR workers, availability of indigenous resources and finances to support CBR activities, and family participation in the rehabilitation of a relative with a disability. Each school should determine whether current human resources and training are adequate. Schools must be encouraged to jointly identify common problems in CBR education and share solutions.</p> <p>© 2020, Action for Disability Regional Rehabilitation Centre. All rights reserved</p>

Social Media Enhances Consumer Behaviour During E-Transactions: An Empirical Evidence From Bahrain

Authors <ul style="list-style-type: none">Alshaer D.S.Hamdan A.Razzaque A.	Abstract <p>This study aims to investigate the role of social media on consumer behaviour in the restaurants industry of Bahrain.</p> <p>The objectives of this research were to assess importance of social media as a marketing tool for Bahrain's restaurants for influencing consumer purchase decision-making. Such an objective was reached by the scholars who randomly collected data from 224 respondents in Bahrain, who use social media, using a survey instrument.</p> <p>The findings of the descriptive analysis revealed that social media affects consumers' decision-making, such that the consumers use the social media to study new products, services, and particularly new brands.</p> <p>Also, ongoing consumer discussions reveal how social media exposes the pros and cons of products, services, and brands, so consumers are comfortable with their online decisions, since they can select broads before settling on what is the best price, quality, etc.</p> <p>Moreover, the social media speeds the spread of information unlike any other mass media; ensuring that new knowledge reaches consumers, hence enhancing competition among retailers in the restaurant industry. This study concludes that social media plays a vital role in promoting consumer welfare and decision-making.</p> <p>© 2020 World Scientific Publishing Co</p>

The Impact Of Green Supply Chain Management On Firm’s Performance

Authors <ul style="list-style-type: none">Jassim S.Al-Mubarak M.Hamdan A.	Abstract <p>As the world grows and develops, people become more aware of business operational processes that are extremely harmful to our environment. Recently, customers’ demands, and governmental legislations have forced domestic and global organizations to implement environmentally sustainable practices in order to cure what has been damaged in the previous decades.</p> <p>This study focuses on the impact of green supply chain management practices on firm's performance. These practices are green purchasing, green packaging, green manufacturing, green design and green marketing.</p> <p>A questionnaire was circulated among two companies of two industries: shipping and automobile. 80 managers and supervisors were targeted; 59 responses were received indicating a response rate of (74%). For testing, regression analysis and T-test were used.</p> <p>From the analysis, it was found that most of green practices influence firm’s performance with green manufacturing the most adopted practice that shapes the industries, followed by green marketing and green purchasing.</p> <p>On the other hand, little impact was found in green packaging and negative impact of green design on firm's performance. Overall, the study indicates that the tested sample is moving towards the green concept but still it is in its first stages and needs more efforts and support from firms, suppliers and customers.</p> <p>© 2020 World Scientific Publishing Co</p>

Network Thinking - A Novel Strategic View For Success In Organisational Networks

Authors

- Abul A.
- Al-Dallal A.

Abstract

Recently, organisations are viewed as a network of connected individuals embedded within a larger network.

This research aims to introduce a Network Thinking framework that applies the proven efficiencies of computer networking concepts on human networks to address the issues faced by organisations at different levels.

Organisational Network Analysis (ONA) methods have been used to analyse the informal network of interactions between members of the system delivery department within a financial institution.

The ONA tools were used to simulate the risks faced by the organisation as a result of the current network of interactions between individuals and the impact of Network Thinking approaches on addressing these issues.

This research shows that Network Thinking concepts can be applied on human networks but cannot completely control the behaviour of its nodes.

The performance is influenced by how nodes interact with each other and the degree of their accessibility to network resources.

The Propensity To Use Fintech: Input From Bankers In The Kingdom Of Bahrain

Authors

- Razzaque A.
- Cummings R.T.
- Karolak M.
- Hamdan A.

Abstract

This study aims to assess why users are willing/hesitant to continue using FinTech services based on their perceived benefits and risks pertaining to the use of FinTech technology.

Data was collected, using an adopted survey instrument, from bankers based in Bahrain, the financial and FinTech hub of the Middle East.

Data analysis was applied to assess the reliability and validity of this study's conceptual model along with its nine hypotheses with 374 valid responses subsequently being analysed using multiple regression via SPSS version 23.

The empirical findings of this study supported all the hypotheses, revealing that both perceived benefit and risks affect the intent to continue using FinTech.

Perceived benefit has a stronger effect than the perceived risk, and convenience perceived most beneficial while financial risk perceived riskiest for using FinTech technology by the bankers of Bahrain.

Influence Of Hand And Smartphone Anthropometric Measurements On Hand Pain And Discomfort: A Cross-Sectional Study

<div>Authors</div> <div><ul style="list-style-type: none">Kamel D.M.Al Hakeem C.Tantawy S.A.</div>	<div>Abstract</div> <div><p>A good mobile phone design may increase the productivity of users, as well as their comfort. To achieve mobile users' satisfaction, there is a need to come up with an ideal measurement that would not strain the human's body parts used to control the devices.</p><p>To investigate the correlation between smartphone and hand anthropometry measurements and the development of hand discomfort and pain. 89 Ahlia University students between the ages of 17- and 30-year-old participated in this study. Participants completed a demographic data sheet and had both of their hand dimensions and grip strength measured.</p><p>A total number of 89 participants were recruited in this study with (57.3%) females and (42.7%) males. 38% have had hand pain recently while 61.8% did not experience any hand pain. There was weak negative correlation between the phone size (r=-0.04, P=.7), hand size (r=-0.08, P=.5), and the hand grip strength (r=-0.03, P=.7) all with the reporting of hand pain. For the phone screen size and the hand lengths (r=0.22, P=.13) there was weak positive correlation.</p><p>Mobile phone manufacturers should take into account the users' comfort when designing their phones as this could lead to hand pain and other musculoskeletal problems.</p></div>

Cyber Security, IT Governance, And Performance: A Review Of The Current Literature

Authors <ul style="list-style-type: none">Al-Sartawi A.M.A.M.Razzaque A.	Abstract <p>Cybersecurity is an emerging field with a growing body of literature and publications. It is fundamentally based in computer science and computer engineering but has recently gained popularity in business management.</p> <p>Despite the explosion of cybersecurity, there is a scarcity of literature on the definition of the term 'Cybers Security' and how it is situated within different contexts.</p> <p>Henceforth, this chapter presents a review of the work related to cybersecurity, within different contexts, mainly IT governance and firm performance context.</p> <p>The work reviewed is separated into four main categories: the importance of cybersecurity and how it is measured, corporate governance and IT governance, IT governance mechanisms, and financial performance measures.</p> <p>© 2020, IGI Global</p>

Using An Artificial Neural Network To Improve Email Security

Authors <ul style="list-style-type: none">Maki M.A.A.M.Subramanian S.	Abstract <p>Email is one of the most widely used features of internet, and it is the most convenient method of transferring messages electronically.</p> <p>However, email productivity has been decreased due to phishing attacks, spam emails, and viruses. Recently, filtering the email flow is a challenging task for researchers due to techniques that spammers used to avoid spam detection.</p> <p>This research proposes an email spam filtering system that filters the spam emails using artificial back propagation neural network (BPNN) technique.</p> <p>Enron dataset was used, and after the preprocessing, TF-IDF algorithm was used to extract features and convert them into frequency.</p> <p>To select best features, mutual information technique has been applied. Performance of classifiers were measured using BoW, n-gram, and chi-squared methods.</p> <p>BPNN model was compared with Naïve Bayes and support vector machine based on accuracy, precision, recall, and f1-score.</p> <p>The results show that the proposed email spam system achieved 98.6% accuracy with cross-validation.</p> <p>© 2020, IGI Global</p>

Trust History-Based Routing Algorithm To Improve The Quality Of Service In Wireless Sensor Network

<div>Authors</div> <div><div><div></div><div>Jedidi A.</div></div></div>	<div>Abstract</div> <div><p>Wireless sensor network (WSN) considered as one of the important technology in our days. Low-cost, low-power and multifunction based on these characteristics WSN become more and more apply in many areas.</p><p>Particular, they have many areas which required a high quality of service (QoS). Indeed, it required security, efficiency and energy consumption.</p><p>Moreover, one of the major challenges in WSN is the security. Indeed, the usual method of security cannot be applied in WSN because the technological limit of the different components.</p><p>In this context, we propose a new method to establish a secure route between the source node and the Sink node. Specially, our method based on routing trust history table (RTH) and trust path routing algorithm (TPR).</p><p>Therefore, our method offers a high level of security for the routing path with efficiency and stability in the network.</p><p>© 2020 Walter de Gruyter GmbH, Berlin/Boston. The Moderating Effect Of Corruption On The Relationship Between Formal Institutions And Entrepreneurial Activity: Evidence From Post-Communist Countries

<div>Authors</div> <div><div><div></div><div>Ghura H.</div></div><div><div></div><div>Harraf A.</div></div><div><div></div><div>Li X.</div></div><div><div></div><div>Hamdan A.</div></div></div>	<div>Abstract</div> <div><p>Purpose: Corruption has been shown to discourage entrepreneurship in both developed and developing countries. However, it is less clear to what extent corruption affects the development of institutions' impact on entrepreneurial activity in the context of emerging economies, such as those in the post-communist countries. The purpose of this study is to use institutional economics as a conceptual framework to analyse the moderating effect of control of corruption (informal institution) on the relationship between formal institutions (such as the number of procedures, education and training [TEDU], access to finance and technology absorption) and entrepreneurial activity.</p><p>Design/methodology/approach: The study used panel data of 14 post-communist countries and different secondary databases from the years 2006-2016.</p><p>Findings: The main findings showed the importance of the institutional environment (formal and informal) on encouraging the rates of entrepreneurial activity.</p><p>Overall, corruption showed that it behaves as a moderator between formal institutions and entrepreneurship. In particular, the evidence from this study showed that formal institutions, such as the number of procedures and TEDU.</p></div>

Current Vulnerabilities, Challenges And Attacks On Routing Protocols For Mobile Ad Hoc Network: A Review

<div>Authors</div> <div><div><ul style="list-style-type: none">AlRubaiei M.Jassim H.Sharef B.T.Safdar S.Sharef Z.T.Malallah F.L.</div></div>	<div>Abstract</div> <div><p>A mobile ad hoc network (MANET) is composed of a set of free and mobile nodes connected on an ad hoc basis.</p><p>They form a temporary dynamic wireless network without any infrastructure. These mobile nodes act as hosts as well as routers in their mode of communication. As a router, these nodes provide connectivity by forwarding data packets among intermediate nodes until they reach the destination nodes.</p><p>Routing protocol is used to maintain their communication and connectivity. However, due to security vulnerabilities of routing protocols and the absence of infrastructure, MANET is vulnerable to various security threats and attacks.</p><p>The main objective of this research is to provide a comprehensive review of the existing vulnerabilities within ad hoc routing protocols that ultimately provides the basis to secure the communication in MANET.</p><p>This chapter gives a brief summary about MANET and discusses the recent routing protocols, which are classified into three different categories as reactive, proactive, and hybrid protocols. In addition, it shows the current challenges and vulnerabilities on ad hoc routing protocols which lead to difficulties in designing and development of a secure routing protocol.</p><p>Furthermore, it presents routing attacks into two categories, internal and external, as well as the security mechanism against them.</p><p>© 2020 Elsevier Inc</p></div>

Does Losing Jobs During COVID-19 Pandemic Affect The Knowledge Management In Businesses?

<div>Authors</div> <div> <ul style="list-style-type: none"> Al Shehab N. </div>	<div>Abstract</div> <p>It is crucial to affirm that people are the most valuable assets within entities. People who have excellent qualifications, superior skills and considerable experience at workplace are the keys which create a constant remarkable success through the ever-changing market conditions.</p> <p>During this COVID-19 global pandemic, many businesses tend to reduce their overhead costs by terminating employees as soon as possible with bearing in mind that this action will drive for better results.</p> <p>On the other hand, researchers concern about the pitfall of losing jobs in terms of losing knowledge due to the fact that employees' terminations will directly affect the knowledge management of their organizations.</p> <p>This paper generally explains the concept of knowledge management and why it really matters for achieving the desired outcomes.</p> <p>Moreover, it highlights the impact of COVID-19 pandemic on different businesses across the continents especially in jobs' terminations that significantly increase the unemployment rates.</p> <p>Furthermore, it focuses on how this pandemic influences the knowledge management within the entity and how they can recover this situation adequately.</p>

Knowledge Management In Higher Educational Institutions Of Oman: Determinants Of Performance

<div>Authors</div> <div> <ul style="list-style-type: none"> Reyad S. Madbouly A. Gupta V. Badawi S. Al Abbas A. </div>	<div>Abstract</div> <div> <p>The study of knowledge management (KM) is critical for higher educational institutions in wake of globalization and thereby increased competition. However, despite its significance, the academic enquiry of KM in education sector is at its nascent stage. This forms the motivation of the present work; this paper aims to analyze and understand the intricate relationship between KM processes and performance in terms of innovation and quality performance in Omani Higher Education Institutions (HEIs). A comprehensive study of KM processes-performance framework consisting of various constructs (some constructs of KM processes and other constructs of KM performance) was done in this empirical research.</p> <p>The underlying factors of variables were developed through an extensive literature review. The employee perceptions of these constructs were captured on a five-point Likert scale using a survey in the Oman education sector institutions. The responses captured were then used to identify strong and weak areas of KM processes and relationship with performance constructs in HEIs. The study found that Knowledge Creation (KC) and Capture and Knowledge Capture and Storage (KSC) significantly affect both, Innovation Performance (IP) and Quality performance (QP) of Omani HEIs; while Knowledge Sharing (KS) and Knowledge Application and Use (KA) do not significantly affect the IP or QP of Omani HEIs.</p> <p>The study concludes that Omani HEIs needs to give more attention to the processes of KC and KSC to be able to improve their KM and consequently improve the IP and QP of these institutions. On another hand, Omani HEIs can be benefited by this elaborate model to assure the integration between the elements of KC and KSC. Further, integration of these two processes with KS and KA to enhance their IP and QP.</p> <p>This study is an attempt to fill the gap in the literature about applying/implementing a KM framework for the higher education sector, especially in Gulf region and therefore significantly contributes toward the theoretical advancement of the field. However, the study is based on the perceptual measures of individual employees, which is a limitation, instead of more objective measures to capture the impact KM processes on KM performance. The HEIs reluctance to share objective data on their performance and KM forced to go for this perceptual study.</p> <p>The strong and significant impact of KM processes on educational institute's performance is expected to provide the impetus for practitioners and policymakers to implement and leverage from KM processes and improve firm performance in the education sector.</p> <p>© 2020 Academic Conferences and Publishing International Limited. The Relationship Between Knowledge Management And Managerial Accounting: Literature Review

<div>Authors</div> <div> <ul style="list-style-type: none"> Shakeeb A. AlAjmi M. Alsaad R. Wadi R.A. </div>	<div>Abstract</div> <div> <p>Knowledge is valuable for management in order for them to offer competitive advantage to the firm. However, all the source of information must be adequate, reliable, and reasonable as the decision making of all companies will use such knowledge to make the best decision, so the more useful information will result the best decision will be taken by the companies.</p> <p>Managerial accounting is a science that has been enhanced and combined with knowledge management which resulted to be a mixture of art and science. Nowadays it is extremely important to combine previous elements in business process because without having knowledge management skill, managerial accounting will not be sufficient, and the organization process will not be operating as the adopted standards in the market.</p> <p>Combining knowledge management with managerial accounting will create high standard process in organization which will brings a competitive advantage to the firm. The purpose of this paper is to investigate the relationship between knowledge management and managerial accounting.</p> <p>The literature review provided evidence on the statistically significant mutual link between the application of managerial accounting and the adoption of knowledge management.</p> </div>

Determinants Of Intellectual Capital Practices: A Comparative Analysis Of Conventional And Islamic Banks

<div>Authors</div> <div> <ul style="list-style-type: none"> Buallay A. Hamdan A. </div>	<div>Abstract</div> <div> <p>Since the banking sector in gulf countries mainly based on Islamic and conventional banking; this paper aims to provide comparative empirical analysis between intellectual capital practices in Islamic and conventional banks, and its impacts on a bank's financial.</p> <p>This study examined 59 banks for five years to ends up with 295 observations. The independent variable is the Modified Value Added Intellectual Capital components (HCE, SCE, RCE and CEE); the dependent variable is Return on Equity.</p> <p>The findings deduced from the empirical results demonstrate that there is positive relationship between IC and financial performance (ROE) in Islamic and conventional banks.</p> <p>However, when measuring the components of IC separately we found that in Islamic banks the HCE negatively affect the ROE while the CEE positively affect the ROE. On the other hand, in conventional banks we found that SCE and CEE positively influence the financial performance.</p> <p>© 2020 Academic Conferences and Publishing International Limited. How to increase knowledge retention in elearning during Covid-19 pandemic?

Authors <ul style="list-style-type: none">Shehab N.A.	Abstract <p>As a matter of fact that one of the COVID-19 consequences is the significant implementation of eLearning methods within universities across the world.</p> <p>As most students used to physically attend the traditional classrooms, nowadays they are obliged to continue their studies through virtual sessions.</p> <p>Academics should conveniently use the available technology tools in order to ease the delivery of information to their students so the quality of teaching will not considerably differ.</p> <p>Even though eLearning has many merits, it also confronts some obstacles. Academics concern about the students’ retention of knowledge through this pandemic and seek for better online teaching approaches for the reason that students can maintain the information for a longer time.</p> <p>This paper explains the concept of eLearning in higher education in particular and what is the recent status of eLearning in the Kingdom of Bahrain.</p> <p>Moreover, it focuses on the knowledge retention notion and why it matters for students in higher education.</p> <p>Furthermore, it provides some useful recommendations for academics to enhance the knowledge retention of their distance students and minimize any occurred problems.</p> <p>As a result, this will ultimately create eLearning champions.</p> <p>© 2020 Academic Conferences Limited. Social Media Disclosure Of Intellectual Capital And Firm Value

Authors <ul style="list-style-type: none">Musleh Al-Sartawi A.M.A.	Abstract <p>This paper aims to examine the relationship between firm value and the level of social media disclosure of intellectual capital by Kuwaiti and Omani listed firms.</p> <p>The level of social media disclosure of intellectual capital was measured by adapting a checklist of 78 items. Also, the financial reports were used to determine Tobin's Q. The results showed that the level of social media disclosure of intellectual capital was 71% by Kuwaiti and Omani firms.</p> <p>Moreover, the findings indicate that there is a significant positive relationship between the firm value and the level of social media disclosure of intellectual capital.</p> <p>The study recommends that the Kuwaiti and Omani bourses must develop a formal guideline for social media disclosure of intellectual capital to create harmony in disclosing information and to enhance the firms' value through taking the advantages of social media in attracting the more talented employees and to maximise the customers and investors benefits. The Impact Of Financial Illiteracy On Entrepreneurship: Evidence From Bahrain

Authors <ul style="list-style-type: none">Ali N.K.Hamdan A.	Abstract <p>Financial literacy is a key factor in entrepreneurship because entrepreneurship requires one make sound decisions and judgments based on a given situation. Understanding the impact of financial illiteracy on entrepreneurship has significance on a country's strategies for implementing financial education literacy in its population.</p> <p>The research incorporates a literature review and data collection in form of a questionnaire distributed to Bahraini entrepreneurs. 120 questionnaires were distributed, while only 108 were viable for the study.</p> <p>The researcher used IBM's Statistical Package for Social Sciences (SPSS) to analyze the data. The researcher conducted a Reliability Test, Normality Test, Correlation Test, and Regression Analysis.</p> <p>The results of the regression test allowed the researcher to accept the hypothesis that financial illiteracy has negative effect on entrepreneurship success, as entrepreneurs need to be financially literate in order to make reliable decisions and make sure their business is successful in the market.</p> <p>The research contributed to studies relating the impact of financial illiteracy and factors affecting entrepreneurship success, as well as filling the gap in knowledge regarding studies related to the research topic.</p> <p>The research is helpful to entrepreneurs to realize the importance of financial literacy, and for organizations to assure their top decision makers have the required skills and knowledge to assure business success.</p> <p>© 2020 Academic Conferences and Publishing International Limited. Zakah Compliance In Muslim Countries: An Economic And Socio-Psychological Perspective

<div>Authors</div> <div><div><ul style="list-style-type: none">Bin-Nashwan S.A.Abdul-Jabbar H.Aziz S.A.Sarea A.</div></div>	<div>Abstract</div> <div><p>Purpose: Although Zakah is the cornerstone of the social protection system in Muslim societies, providing relief to those in need and collecting funds from those who have access to money and property, many administrative and legal improvements need to be made to ensure that Zakah funds are managed effectively and efficiently in Muslim states. It is therefore important to recognize why some Muslims are not paying their Zakah through Zakah authorities. The purpose of this paper is to propose a viable and comprehensive research model, derived from an economic and socio-psychological perspective, to provide a richer understanding of Zakah payers' compliance behaviour.</p><p>Design/methodology/approach: Drawing on extant literature, this study offers a conceptual framework for a better understanding of compliance behaviour by proposing an economic and socio-psychological model based on Fischer's tax compliance model, which could be applied cautiously in an Islamic setting like Zakah.</p><p>Findings: The four main categories of the Fischer model are derived from socio-psychological and economic perspectives, namely, attitude and perception (system fairness, ethics and peer influence); Zakah system structure (Zakah law complexity and law enforcement); non-compliance opportunity (education level, wealth source and occupation); and demographic factors (age and gender). Each has much to offer in understanding Zakah payers' compliance decisions. To suit the nature of Zakah, the influence of Islamic religiosity and the moderating effect of trust in the Zakah institution are incorporated into the model.</p><p>Practical implications: Those Muslim communities that strive to have functional Zakah systems to search for solutions to the perennial problem of low Zakah funding and its damning consequences, are offered a compliance model for systematically assessing Muslims' compliance behaviour with Zakah provisions. This framework is anticipated to offer invaluable input to policymakers in streaming and strategizing the minimization of losses of Zakah revenue to Zakah authorities.</p><p>Originality/value: Although behavioural models such as the theory of reasoned action and the theory of planned behaviour have been extensively used in Zakah compliance studies, to the best of the authors' knowledge, this study is perhaps the first to apply a socio-psychological and economic framework, emerging from tax literature, in the Zakah environment to develop fully understanding of Zakah payers' compliance decisions.</p><p>© 2020, Emerald Publishing Limited</p></div>

Physicians Social Capital Aids Their Medical Decisions When They Virtually Share Knowledge

Authors

- Razzaque A.
- Eldabi T.

Abstract

Knowledge sharing is daunting to physicians with unclear benefits of improving diagnoses/reducing medical errors.

This study explores one aspect of shared knowledge sharing by assessing the effect of physicians' social capital on their decision making mediated by shared knowledge in virtual communities.

This study followed a deductive approach. It quantitatively tested 14 hypotheses via a framework based on an adapted survey. This survey was distributed to 204 VC-physician-members.

Empirical evidence suggested social capital positively influences physicians' decision making, through trust and identity, during the virtually shared knowledge. Theoretical and practical implications are discussed in our article.

The model of our study is the first of its kind: holistically assesses the role of social capital theory, knowledge sharing, and decision making of virtual community physician members.

Empirical findings extend current methods and understanding of the role of virtual community physicians' social capital of resources for decision making when mediated by their knowledge sharing behaviour.

Abstract

The Internet has allowed us access to information in the most efficient ways. However, it's not all rainbows and butterflies.

The case of individuals who attempt to utilize this technology has been brief yet quick to escalate during this short period of time. This paper is aimed at providing insight on and to better understand how “Fraudsters” use tools provided by e-commerce organizations to attain legitimate withdrawals from financial institutions.

This paper explains “Cyber Laundering” and presents the different methods that criminals utilize to launder money through online payment. Information provided in this study is accumulated through analysis of various academic as well as non-academic sources.

Efforts to combat and propose countermeasures of cyber laundering and online fraud are served at the end of this study.

Weight-Related Behaviours In Bahraini Adolescent Friendship Networks:
Exploring The Moderating Role Of Friendship Network Properties
[Comportements Liés Au Poids Dans Les Réseaux Sociaux Des Adolescents
Dans Le Royaume De Bahrein: Exploration Du Rôle Modé

Abstract

Introduction. Much of the research in obesity has explored the role of social networks in promoting health through social influence and selection.

However, little research has examined how social networks themselves could condition health behaviours. Research began to address more detailed questions regarding peer socialization process and network properties.

One of the key questions is whether behaviour association (either peer socialization or selection) is dependent on the local network structure. Examining social network position, structure, and how they interact with behaviour provide valuable insight on how to modify these behaviours.

The objective of the study was to examine the moderating role of friendship network properties on the association between individual's and friends' weight-related behaviours among adolescents.

Materials and methods. Methods are drawn from a set of analytical tools known as 'Social Network Analysis', which uses friendship nomination data from a complete network (socio-metric), along with reported data on diet, physical activity, sedentary behaviour, and sleep deprivation.

Results. A total of 673 adolescents aged between 11-15 years, from four schools in Kingdom of Bahrain, participated in this study. Findings from binary logistic regression models suggest that there are associations between adolescents and their friends' in multiple weight-related behaviours.

There is also evidence for the moderating role of some network properties on these associations. Conclusions. Properties of friendship network are critical in conditioning associations between individuals and their friends' weight-related behaviours.

However, findings are gender specific, which has implications for gender-tailored interventions.

Usability Evaluation Of A Distributed User Interface Application For
Visuomotor Organization Assessment

Abstract

Background This article describes the development and evaluation of a distributed user interface (DUI) application to assess visuomotor organization ability.

This application enables therapists to evaluate the acquired brain injury (ABI) on patients, and patients, to perform the assessment on a touch screen while therapists can observe the assessment process in real time on a separated monitor without interfering patients during the process as in traditional methodologies employing physical elements.

Objectives The main goal of this research is the evaluation of the quality in use of DUIs in the Pegboard Construction assessment with patients with ABI from the therapist perspective in the area of occupational therapy.

Methods To evaluate our system, we have performed a usability evaluation following the ISO/IEC 25010 and ISO/IEC 25062 standards to evaluate software usability and quality and it was conducted in collaboration with therapists and psychologists that have previously worked with people with ABI in diagnostic and assessment tasks.

Results We show the results of the evaluation collected in a table that shows the completeness rate for each user for both, assisted (i.e., the percentage of tasks where participants performed with test director assistance) and unassisted tasks (i.e., the percentage of tasks where participants completed tasks autonomously), the total time participants required to complete proposed tasks, the number of mistakes participants performed during the session, and the number of assists they required to finish proposed tasks.

In addition, we also evaluated the user satisfaction regarding our application using the system usability scale. Conclusion The use of information technologies in this field enables therapists to perform these evaluations in a simpler, efficient, and automated way.

This proposal enables patients to perform the assessment as it is performed traditionally using paper providing them with a touch screen in which they can easily insert a set of pins into the holes.

The usability evaluation of the proposal meets the appropriate design standards for applications of this type, and this is demonstrated by the high degree of satisfaction of the participants.

Fuzzy Logic-Based Trusted And Power-Aware Routing Protocol In Mobile Ad-Hoc Networks

<div>Authors</div> <div><ul style="list-style-type: none">Shaker H.Sharef B.T.Sharef Z.T.</div>	<div>Abstract</div> <div><p>Mobile ad-hoc networks (MANETs) have attracted much attention from researchers lately because MANETs are able to provide networks in areas with unavailable fixed network infrastructure.</p><p>However, some mobile nodes may misbehave by dropping packets to conserve power usage because mobile ad-hoc networks nodes are usually battery operated. In this paper, a fuzzy logic-based routing protocol that considers the battery level of nodes, hop count, and trust among the nodes is proposed.</p><p>The proposed routing protocol adaptively selects routes that use minimum hop count with the highest level of trust and a sufficient battery level to enhance the reliability of route selection while maintaining the percentage of successfully delivered packets.</p><p>The result of the simulation shows that the proposed protocol can achieve a high ratio of successfully delivered packets, a lower average end-to-end delay, and a normalized routing load.</p><p>© 2020, Kohat University of Science and Technology</p></div>

The Impact Of COVID-19 On Price Volatility Of Crude Oil And Natural Gas Listed On Multi Commodity Exchange Of India

Authors

- Meher B.K.
- Hawaldar I.T.
- Mohapatra L.
- Sarea A.M.

Abstract

The impact of COVID-19, due to the wide-spread demand and supply destruction and downward movement of crude oil prices is of concern for all those connected with the oil and gas industry.

In this study, an attempt has been made to estimate the price volatility of crude oil and natural gas listed on multi commodity exchange of India (MCX). We measured the leverage effect of COVID-19 on price volatility of crude oil and natural gas by using the daily prices of crude oil and natural gas from May 01, 2017 to April 30, 2020.

The findings of the study reveal that there is a presence of leverage effect of COVID-19 on the price volatility of crude oil. However, this leverage effect is not present on the price volatility of natural gas.

The findings of the study will help investors to develop investment strategies and to the policymakers to formulate appropriate policies to overcome or minimise the impact of COVID-19.

The forecasting graphs of crude oil prices indicate that there is a possibility that price volatility will be higher in the future. However, it is difficult to forecast the expected price volatility of natural gas for the future because the price volatility graph is extremely fluctuating.

Abstract

Purpose: Managers claim that fresh graduates are unequipped to meet market demands. The aim of this study is to investigate the perception of employers in retail Islamic banks of Bahrain on newly graduated business students. The Singaporean Model of Employability Skills was implemented, to ascertain the mean ratings of employability skills in terms of their importance and the competency of business graduates.

Design/methodology/approach: This deductive research approach initiated with a literature review that identifies research gap and a model that was tested via a self-administration adopted survey by collected data from 220 senior employees at retail Islamic banks of Bahrain

Findings: The systematic of convenience sampling technique was used in selecting 161 samples and the researcher received only 85 completed questionnaire forms. Findings initiate that employers appreciated the importance of teamwork, risk management and decision-making skills. Their main recommendation was that employers should establish a durable bond with universities to enhance employability skills.

Originality/value: Because the researcher gathered all data from employers of different Islamic banks in Bahrain, this sector in addition will get the advantage of the results that banks will formulate their strategic plans accordingly to tackle the business graduates' weaknesses.

Sustainable Development Through Five Senses Of Effective Corporate Social Responsibility Strategy

<div>Authors</div> <div><ul style="list-style-type: none">Al Mubarak M.</div>	<div>Abstract</div> <p>Purpose: This study aims to introduce a five senses concept (sight, hearing, taste, touch and smell) that enhances corporate social responsibility (CSR) strategy. It sheds light on the effective CSR senses, which are required by firms for better performance and sustainable development.</p> <p>Design/methodology/approach: The main approach for collecting information for discussion is the literature review focusing on topics such as CSR strategy, CSR activities, sustainability and sensemaking.</p> <p>Findings: While searching the literature, little was found on sensemaking and very little was found on CSR five senses, a gap which needs to be looked at. A gap was also found between what firms do and what are expected from them to deliver to society in terms of CSR activities which puts sustainability at risk.</p> <p>Practical implications: Firms are expected to improve performance when these five CSR senses are incorporated in their strategy and activities. This approach makes firms work effectively to meet different stakeholders' needs and wants internally and externally; hence, a better satisfaction level can be achieved and sustainable development is likely to be better secured.</p> <p>Originality/value: The idea of CSR senses has been neither thoroughly discussed nor sufficiently developed as a five CSR senses concept in the previous studies.</p>

Web-Based Financial Reporting Disclosure: Evidence From Selected Banks In The Kingdom Of Saudi Arabia (KSA)

<div>Authors</div> <div><ul style="list-style-type: none">Sarea A.M.</div>	<div>Abstract</div> <p>With insights drawn from legitimacy theory undergirding perceived relative factors expected to influence the level of Web-Based Financial Reporting Disclosure (WBFRD), this paper sheds light on the level of the Web-Based Financial Reporting Disclosure (WBFRD) in selected banks in the KSA in 2017.</p> <p>Several gauges exist for measuring the level of transparency and disclosure practices. As a result of the unique characteristics of the banking sectors operating in the KSA under the Sharia-compliant (Islamic) law, however, the researcher eschewed employing Standard & Poor's Transparency and Disclosure checklist.</p> <p>Accordingly, the researcher designed a 90-item index based on metrics identified in previous studies. The selected banks in the KSA evince a high level of Web-Based Financial Reporting Disclosure (WBFRD) on the order of 76%.</p> <p>Regression analysis indicates a positive association between the independent variables Bank Size, Bank age, and Profitability on one side, and the dependent variable Web-Based Financial Reporting Disclosure (WBFRD) on the other side.</p> <p>© 2020 Sciendo. Prevalence And Predictions Of Body Mass Index Categories Among University Students In The Kingdom Of Bahrain

Authors <ul style="list-style-type: none">Woodman A.Jaoua N.Al-Jamea L.Amini M.	Abstract <p>Over the past two decades, the Kingdom of Bahrain has seen an increase in weight in a growing number of people. Experts in the field determined that it is due to a lack of exercise and poor dietary habits.</p> <p>The problem has reached extremely high records of obesity, 37% for females and 30% for males. The statistics were gathered during a cross-sectional study of 414 volunteers at a local shopping mall.</p> <p>The goal of this primary data analysis was to determine the current prevalence of weight abnormalities. The findings were used to predict the trend of such abnormalities among the sub-population of university students in the Kingdom of Bahrain.</p> <p>The analysis, done in 2018, was based on 1,100 surveys collected from subjects in the central universities in the Kingdom of Bahrain including the University of Bahrain, Ahlia University, University of Bahrain, Arabian Gulf University, Applied Science University, AMM International University, Arab Open University, and Bahrain Polytechnic.</p> <p>The research was conducted over a period of several months. The authors developed surveys in both Arabic and English and randomly selected participants aged between eighteen and twenty-five among full-time students from major universities in the Kingdom of Bahrain.</p> <p>The standards of these weight issues, including obesity, over-weight and under-weight issues were determined with the use of the International Classification Index, a diagnostic tool used for health management. It is managed and prescribed by the World Health Organization.</p> <p>Based on the Chi-square test, the results strongly depended on gender, age, and the extent of exercise performed on a weekly basis. As a result, a multinomial logistic regression involving these factors was used to compare the trends and predict the highest and lowest probabilities of each abnormal weight.</p> <p>For example, the male students, aged twenty-two or older who exercised less than one hour a week, were the most likely to be obese and overweight; about a 20% to 42% chance, respectively. However, the students most probable to be underweight (about 11%) were those females; aged eighteen and nineteen who exercised less than one hour a week.</p> <p>© 2020, Yerevan State Medical University. Effects Of Second-Hand Smoking On Lung Functions In Athlete And Non-Athlete School-Aged Children – Observational Study

Authors

- Elshazly F.A.
- Abdelbasset W.K.
- Elnaggar R.K.
- Tantawy S.A.

Abstract

Background: Second-hand smoking or environmental tobacco smoke is a critical health risk. Children are the most vulnerable to second-hand smoking because of their small bronchial ducts, less developed immunity, and low-physical activity.

Objectives: The purpose of this study was to ascertain the effects of second-hand smoking on lung functions in athlete and non-athlete school-aged children.

Methods: This observational study included forty-six school-aged children, their age was 8-15 years, assigned to three groups; 2 study groups and 1 control group (n=15). The study groups comprised of 16 football players, and of 15 cyclists. Lung functions were evaluated recording forced vital capacity, forced expiratory volume in 1 sec and peak expiratory flow using digital spirometer.

Results: All measures were recorded in definite values and the children were also classified into second-hand smoking (SH), or non-exposed to tobacco smoking (NE). The findings presented a significant increase (p<0.05) of the study groups in forced vital capacity, forced expiratory volume in 1 sec and peak expiratory flow solely for the non-exposed children.

However, there were non-significant differences between the cyclists and football players or between the passive smoking children and non-exposed children in any of the two study groups (p>0.05).

Information Technology Governance And Cybersecurity At The Board Level

Authors

- Al-Sartawi A.M.A.M.

Abstract

Security breaches are very costly in the USA, followed very closely by the Middle East. Shareholders and investors demand that their firms mitigate all kinds of risks, and it is the responsibility of the BOD to gain and maintain their confidence. In view of this scenario, MENA companies need to protect their data, while the BODs need to embed a culture of cybersecurity in the firm.

The aim of this paper is to examine the relationship between information technology governance (ITG) and the level of cybersecurity by MENA listed firms. The study used a checklist to collect data from a sample of 94 firms listed in the financial stock markets of the MENA countries for the year ended 2018.

The study found that there is a significant and direct relationship between ITG and the level of a firm’s cybersecurity. This indicates the importance of appointing board members with IT knowledge and experience. This leads to better decisions taken by the BODs when faced with cyber-threats and challenges.

In addition, IT expertise on the BODs can be important to understand what the Heads of IT are doing on the inside and, thus being knowledgeable enough to challenge their actions.

Correlation Between Body Mass Index, Neck Circumference, And Waist-Hip Ratio As Indicators Of Obesity Among A Cohort Of Adolescent In Bahrain A Preliminary Cross-Sectional Study

<div>Authors</div> <div><div><ul style="list-style-type: none">Tantawy S.A.Kamel D.M.Alsayed N.Rajab E.Abdelbasset W.K.</div></div>	<div>Abstract</div> <div><p>Neck circumference (NC) is an attractive method for determining overweight and obesity in school age children because it is inexpensive and culturally acceptable.</p><p>However, this technique has not been assessed for its accuracy in school children from countries of the Gulf Cooperation Council, which have high prevalence of overweight and obesity.</p><p>The aim of this preliminary study was to investigate the correlation between the body mass index (BMI), NC, and waist-hip ratio and demographic characteristics among 10- to 18-year-old adolescent school children in Bahrain.</p><p>BMI was calculated using Center of Disease Control and Prevention Children’s BMI Tool for Schools. Data was collected for a total of n = 397 adolescents from 4 different private schools with an average age of 12.91 years; 57.7% were male and 42.3% female. In this sample of adolescents, 50.1% were either overweight (21.4%) or obese (28.7%).</p><p>BMI was significantly associated with waist-hip ratio (P <.01), gender (P <.05), and age (P <.01). Multiple linear regressions revealed that NC was significantly associated with age (P <.001) and less so with gender (P =.071) and BMI was significantly associated with NC (P <.01), gender (P <.01), and age (P <.05).</p><p>Analysis of the receiver operating characteristic for males and females combined showed fair sensitivity and specificity (Area under the curve (AUC) = 0.707; 95% CI: 0.656, 0.758). NC is weakly correlated with BMI, and only a fair instrument for identifying overweight/obesity based on receiver operating characteristic curve analysis.</p><p>Therefore, NC could only be used as an adjunct screening tool for weight status in this sample.</p><p>© 2020 the Author(s). Effect Of Moderate-Intensity Aerobic Exercise On Hepatic Fat Content And Visceral Lipids In Hepatic Patients With Diabetesy: A Single-Blinded Randomised Controlled Trial

<div>Authors</div> <div><div><ul style="list-style-type: none">Abdelbasset W.K.Elsayed S.H.Nambi G.Alrawaili S.M.Elnegamy T.E.Khalil M.A.Tantawy S.A.Soliman G.S.Ibrahim A.A.Kamel D.M.</div></div>	<div>Abstract</div> <div><p>Objective: Limited studies have assessed the effect of moderate-intensity continuous aerobic exercise on hepatic fat content and visceral lipids in hepatic patients with diabetesy. This study was designed to evaluate hepatic fat content and visceral lipids following moderate-intensity continuous aerobic exercise in hepatic patients with diabetesy.</p><p>Design: A single-blinded randomised controlled trial. Methods. Thirty-one diabetic obese patients with nonalcoholic fatty liver disease were recruited into this study.</p><p>The patients were randomly classified into exercise and control groups, fifteen patients in the exercise group and sixteen patients in the control group. The exercise group received an 8-week moderate-intensity continuous aerobic exercise program with standard medical treatment, while the control group received standard medical treatment without any exercise program. Hepatic fat content and visceral lipids were assessed before and after intervention at the end of the study.</p><p>Results: Baseline and clinical characteristics showed a nonsignificant difference between the two groups (p>0.05). At the end of the intervention, the aerobic exercise showed significant improvements (serum triglycerides and low-density lipoproteins (LDLs), p≤0.002, total cholesterol, p=0.004, visceral fats, p=0.016, glycated hemoglobin (HbA1C), p=0.022, high-density lipoproteins (HDLs), p=0.038, alanine transaminases (AL), p=0.044, intrahepatic triglyceride and HOMA-IR, p=0.046, and body mass index (BMI), p=0.047), while the control group showed a nonsignificant difference (p>0.05). The postintervention analysis showed significant differences in favor of the aerobic exercise group (p<0.05).</p><p>Conclusions: Moderate-intensity continuous aerobic exercise reduces the hepatic fat content and visceral lipids in hepatic patients with diabetesy. Recommendations should be prescribed for encouraging moderate-intensity aerobic exercise training, particularly hepatic patients with diabetesy.</p><p>© 2020 Walid Kamal Abdelbasset et al.</p></div>

Sustainability Reporting And Bank Performance After Financial Crisis: Evidence From Developed And Developing Countries

<div>Authors</div> <div><div><ul style="list-style-type: none">Buallay A.Fadel S.M.Alajmi J.Saudagaran S.</div></div>	<div>Abstract</div> <div><p>Purpose: This study aims to examine the relationship between sustainability reporting and bank performance after financial crisis in developed and developing countries.</p><p>Design/methodology/approach: This study examines 882 banks from developed and developing countries covering 11 years after the 2008 financial crisis. The independent variable is environmental, social and governance (ESG) scores. The dependent variables are return on assets, return on equity and Tobin's Q. This study uses bank- and country-specific control variables to measure the relationship between sustainability reporting and bank performance.</p><p>Findings: The findings deduced from the empirical results demonstrate that ESG improves banks’ accounting and market-based performance in developed countries, supporting value creation theory. Using pooling regression and instrumental variable – generalized method of moments, this study finds that ESG weakens banks’ performance in developed and developing countries.</p><p>Originality/value: To the best of the author’s knowledge, this is the first study to investigate and compare the impact of sustainability reporting on banks’ performance in developed and developing countries. The study found similarities in the impact of sustainability reporting and the improvement of banks’ current and future performance.</p><p>© 2020, Emerald Publishing Limited</p></div>

Rethinking Economic Development In Muslim Societies In The Context Of
The Fourth Industrial Revolution

Authors

- Al-Roubaie A.
- Sarea A.M.

Abstract

Economic development is a process of structural transformation not only involves productivity growth, but also improvement in the quality of life. In most developing countries, including Muslims, economic productivity remains low to foster growth and meet the challenges of the 21st century.

The new economy, driven by the Fourth Industrial Revolution, underscores the importance of investment in human capital, knowledge creation and innovation so that to increase competitiveness and deepen integration in the global markets.

Digitization facilitates connectivity and enhances the country capabilities to gain access to technology and skills needed for promoting innovation and diversifying output. Rethinking development requires adapting new strategies for development to support labor market flexibility and strengthen digital readiness.

With the exception of a few countries, economic productivity in the Muslim world remains low to foster rapid growth and catch up with the rest of the world. In Muslim countries, economic development is driven by traditional sectors, mainly agriculture, with little contribution of manufacturing production.

The Fourth Industrial Revolution requires investment in digital technologies, artificial intelligence, nanotechnology, green energy and robotics to increase the country innovative capabilities and diversify output.

The Muslim world should rethink development to develop strategies that strengthen connectivity, collaboration, technological learning and digitization..

The Fourth Industrial Revolution: Challenges And Opportunities For Mena
Region

Authors

- Al-Roubaie A.
- Alaali M.

Abstract

The new technologies driving the Fourth Industrial Revolution are expected to cause substantial impact on human societies. Recent advancement in digital technologies is changing market demand for labor by introducing new tasks that require new skills.

The new technologies including automation, robotics and artificial intelligence are disruptive causing structural unemployment and inequalities among and within nations.

In particular, countries in MENA region need to respond to the challenges of the new technologies by formulating strategies aiming at increasing participation in the Fourth Industrial Revolution and sustaining economic growth.

This paper sheds light on the challenges and opportunities facing developing countries in general and MENA region in particular by discussing the prospects that these countries can benefit from the new digital economy.

Innovative Technology: The Aviation Industry And Customers Preference

Authors

- Fuad A.
- Al-Hashimi M.
- Hamdan A.

Abstract

This paper has investigated the impact of innovative technology on customer preference. Innovative technologies used by other carriers in the world were explored and populations from the Kingdom of Bahrain were asked if these technologies have any impact on their selection.

The majority of the respondent considered innovative technology to have an influence on their selection of an airline. The technologies that had the most significance are radio frequency identification and the Internet availability onboard the flights.

Where these two impacted the decision of selecting an airline on the consumer. The literature focuses on the research journals and articles along with figures and theories that are linked to the main variables of the research.

It also includes the literature of innovation, technologies and customer satisfaction, and the history of aviation along with the history of some of the technologies.

- Gannas R.S.A.
- Khadem S.A.
- Kamel D.M.

Abstract

BACKGROUND: Mood disorders such as generalized anxiety disorder (GAD), obsessive-compulsive disorders, and other mental disorders could be due to obesity which is a prevalent condition among majority of population nowadays, whereas changes in anxiety level of individuals are also thought to have an influence on body mass index (BMI). AIM: The objective of the study was to investigate the relationship between BMI and anxiety status among Ahlia University students.

METHODS: A total of 80 male and female students from different colleges of Ahlia University were included in our study. Their ages ranged between 18 and 25 years old with different BMI. The students were asked to fill a (GAD 7 scale) questionnaire related to anxiety level; their BMI was calculated. RESULTS: There was a significant relationship between BMI and anxiety status (negative correlation) (p < 0.019).

CONCLUSIONS: We concluded that BMI is inversely proportional to anxiety level, the reduction in BMI level is linked with elevated anxiety level and vice versa.

Causal Nexus Between The Anamolies In The Crude Oil Price And Stock Market

Authors

- Hawaldar I.T.
- Rajesha T.M.
- Lokesha
- Sarea A.M.

Abstract

The paper attempts to examine the causal association between the crude oil price anomalies and stock market returns in the Indian stock market.

The study covers 9 years starting from 2009 to 2018, and the study includes ten companies in the oil drilling and exploration sectors listed in the BSE Sensex and CNX NIFTY indexes.

We employed correlation tests in determining the relationships amongst the stock market return, crude oil price and market benchmarking indexes.

Our study concludes that the oil price shocks is not directly affecting the stock prices of oil-related firms; instead, its indirectly impacting the economy through different channels such as fiscal, trade and price channels.

We also suggest the need for future researches in determining the effect of oil price variations on the macroeconomic factors by precisely diagnosing the role of channels mentioned above.

The Role Of Knowledge Management In Strategic Decision-Making In Higher Education Institutions (HEIs): A Proposed Model

Authors

- Aldhaen E.

Abstract

Higher education institutions (HEIs) around the world are facing serious challenges towards planning and implementing their own strategic plans. Previous studies have been conducted to evaluate the strategic decision-making process in HEIs, and the factors that influence strategic planning.

It was identified that rationality and intuition play a vital role towards effective planning. This paper intends to propose a model to evaluate the extent of knowledge required to support rationality and intuition leading to strategic decisions at HEIs.

The paper will demonstrate the different types of knowledge and their relationship with rationality and intuition, leading to effective decision-making in HEIs. The findings of this paper will support researchers and HEIs, as well as policy makers, to develop or revise current practices of strategic planning and knowledge sharing.

Audit Committee Characteristics And Earnings Conservatism In Banking Sector: Empirical Study From GCC

Authors <ul style="list-style-type: none">Hamdan A.M.M.	Abstract <p>We examine four audit committee characteristics, including the audit committee independence, size of audit committee, audit committee diligence and financial experience of the audit committee members to identify if any of these characteristics differentially impact the earnings conservatism.</p> <p>The sample included 59 banks from Gulf Cooperation Council (GCC) countries: Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and United Arab Emirates during the period of 2012-2016.</p> <p>To achieve this goal, the study measures earnings conservatism using market-to-book approach. By using panel fixed-effect regression, our analysis reveals that bigger audit committees with more independence and members with financial experience are more likely to be associated with earnings conservatism in GCC banks.</p> <p>We also find that the audit committee diligence has no impact on earnings conservatism.</p> <p>© 2020 Inderscience Enterprises Ltd</p>

Peak-End Rule Promotes Social Capital For Knowledge Management In Thru Social Internet Of Things

<div>Authors</div> <div><ul style="list-style-type: none">Razzaque A.Hamdan A.</div>	<div>Abstract</div> <p>Psychologically speaking, the mind is unique for judging experiences. A moment during a film or a meal can influence the overall judgment of the thinker wither towards a positive manner or towards a negative manner.</p> <p>Empirical research reported evidence of the role of peak-end rule applicable during circumstantial experiences. This literature review study proposes a conceptual model, viable for future empirical assessment, integrating three schools of thoughts:</p> <p>(1) Social Capital Theory and (2) the Peak and End Moment mediated by (3) Experience—harnessed by the knowledge sharing behavior in social networks which are facilitated by the Internet of Things infrastructure and architecture.</p> <p>Social capital is an intangible resource, like shared knowledge between participants in a virtual community. This keeps a virtual community alive provided the social capital of resources are not depleted when members’ participation begins to drop.</p> <p>Past research assessed the role of Social Capital Theory on knowledge sharing motivated via the Social Cognitive Theory; reporting situations where virtual communities died out once there was decreasing participation.</p> <p>Current literature has led us to pin-point a need for an integration of peak-end rule, to facilitate experience, which therefore can promote social capital in a virtual community: To understand why participants decided to virtually make or break their social ties.</p>

Social Networking With Internet Of Things Aid Bahraini Medical Professionals’ Decisions Through Their Knowledge Sharing

Authors

- Razzaque A.
- Hamdan A.

Abstract

The rise in the demand to improve healthcare (HC) service quality led research to focus on cost effective initiatives like the social networks facilitated by the social internet of things (SIoT).

Social networks and SIoT support HC professionals, physicians, the case of this study, for better decision-making to reduce the highly reported diagnostic errors.

This research in progress critiqued current literature to propose the need to assess the effect of physicians’ leadership on their decision making (DM) style, mediating by their social capital (SC). Such two relations are proposed in a viable framework worthy of future empirical assessment.

Convergence Of Accounting Standards, Financial Transgression And Regulatory Reforms In India And USA

Authors <ul style="list-style-type: none">Aggarwal M.Dhiman B.Kukreja G.	Abstract <p>The purpose of the study is to find the various reasons of financial transgression in India and USA and evaluation of subsequent changes made thereafter by regulatory bodies in the statutes so that no such cases occur in future.</p> <p>Secondary sources of information are used to cover cases of financial transgression in India and USA for the period 1991 till 2018. Major loopholes have been found in Indian regulatory framework rather than in USA.</p> <p>It is observed that even after USA proactively changed the rules, yet the financial transgression cases could not be fully eliminated by them. The timeline of the cases in India and USA is strategically hinting towards the weak regulatory system of India along with late changes made in the relevant regulatory framework.</p> <p>Remarkable reduction in number of cases of financial transgression has been reported but India has not learnt a lesson from US corporate failures.</p> <p>© 2019 SERSC</p>

Performance Of Islamic Banks: Do The Frequency Of Sharī'ah Supervisory Board Meetings And Independence Matter?

Authors <ul style="list-style-type: none">Musleh Alsartawi A.	Abstract <p>Purpose: This paper aims to investigate the relationship between the composition of Sharī'ah supervisory boards (independence and frequency of meetings) and the performance of Islamic banks in the Gulf Cooperation Council (GCC) countries.</p> <p>Design/methodology/approach: The study developed a multiple linear regression model, and data were collected from the annual reports of 48 standalone Islamic banks listed in the GCC countries covering the period between 2013 and 2017.</p> <p>Findings: The results showed a statistically significant and negative relationship between the composition of the Sharī'ah supervisory boards and the performance of Islamic banks.</p> <p>Research limitations/implications: As the current study used only one indicator, that is Return on Assets to measure performance, it is recommended to expand the framework of this study, through the addition of market-based performance indicators such as Tobin's Q.</p> <p>Practical implications: This study recommends the GCC countries to follow a more proactive Sharī'ah governance model to strengthen their frameworks from both regulatory and non-regulatory aspects.</p> <p>Originality/value: The study contributes to the Sharī'ah governance and Islamic banking literature relating to the GCC countries as previous studies gave no attention to the composition of Sharī'ah supervisory boards.</p> <p>© 2019, Abdalmuttaleb Musleh Alsartawi</p>

Intellectual Capital Efficiency And Bank’s Performance: A Comparative Study After The Global Financial Crisis

Authors <ul style="list-style-type: none">Buallay A.Cummings R.Hamdan A.	Abstract <p>Purpose: Intellectual capital (IC) plays a pivotal role in the high-tech and knowledge-based economic sectors. With the emergence of FinTech, which, with respect to the banking sector, is merging high-tech with the k-economy, there is an emerging need to highlight the importance and understand the dynamics of bank IC. With respect to Gulf Cooperation Council (GCC) economies, where FinTech has become de rigueur, banking is bifurcated into Islamic and banking sectors. Through comparative empirical analysis, the purpose of this paper is to examine IC efficiency in Islamic and conventional banks with a view to elucidating the impact of IC, in aggregate and decomposed into its components, on an operational, financial and market performance of Islamic banks juxtaposed with conventional banks.</p> <p>Design/methodology/approach: Using data collected from 59 banks for five years (2012-2016) involving 295 observations, an independent variable derived from the modified value added IC (MVAIC) components are regressed against dependent bank performance indicator variables [Return on Assets (ROA), Return on Equity (ROE) and Tobin’s Q (TQ)]. Two types of control variables complete the regression analysis in this study: bank-specific and macroeconomic.</p> <p>Findings: The findings elicited from the empirical results demonstrate that there is positive relationship between IC efficiency and financial performance (ROE) and market performance (TQ) in Islamic banks. In conventional banks, however, there is a positive relationship between IC and operational performance (ROE) and financial performance (ROE).</p> <p>Originality/value: The model in this paper presents a valuable analytical framework for exploring IC efficiency as a driver of performance in dual-sector banking economies characterized by co-existence of Islamic and conventional financial institutions. In addition, this paper highlights bank management lacunae manifesting in terms of the weak nexus between: IC and asset efficiency (ROA) in Islamic banks and IC and market value (TQ) in conventional banks.</p> <p>© 2019, Emerald Publishing Limited</p>

Motivation And Blockades For Entrepreneurship Among Graduates

Authors <ul style="list-style-type: none">Pinto S.Pinto P.Hawalдар I.T.Sarea A.M.	Abstract <p>The Indian government is facing a main challenge of youth unemployment for decades. Entrepreneurship is a frequent topic of discussion to many academicians and research scholars. It is a treasured supplementary tactic to generation of jobs, upgrade lifestyle and economic freedom of young people.</p> <p>With potential efforts and strategies by the government, educational institutes and the communities, it is important to boost employment and job creation for the youth of our country. Entrepreneurship has been an engrossing subject for most of the researchers and it has been put forth regarding an individual's skills, characteristics, and interests.</p> <p>The study focuses on the entrepreneurial intention in general and to analyse the blockades and motivating factors for business start-up among graduates. The study consists of final year graduate students studying in different colleges affiliated to Mangalore University.</p> <p>The study is exploratory in nature and the sample size consists of 433 final year students from various colleges within Mangaluru city. The data is interpreted through descriptive statistics, factor analysis, and correlation tests.</p> <p>The results reveal that most of the students are not certain about their future goals. It is explored that they have a significant correlation between inclination towards entrepreneurship and desire for autonomy, self-determination, realisation of own ideas, thinking innovatively and ability of risk-taking.</p> <p>Meanwhile, the students also lack creative skills, confidence, and business idea. It is concluded that the graduates are found to be reluctant towards entrepreneurship.</p>

Between Cost And Value: Investigating The Effects Of Sustainability Reporting On A Firm’s Performance

<div>Authors</div> <div><ul style="list-style-type: none">Buallay A.</div>	<div>Abstract</div> <p>Purpose: There are wide debates about the costs and benefits of sustainability reporting. The purpose of this paper is to investigate the relationship between sustainability reporting and a firm’s financial, operational and market performance in order to determine when sustainability reporting benefits a firm and when it adds cost.</p> <p>Design/methodology/approach: This study examined 342 financial institutions within the 20 countries that top the list of achievers of sustainable development goals for the 10 years 2007 through 2016, for a total of 3,420 observations. The independent variable is the environmental, social and governance (ESG) score; the dependent variables are performance indicators (return on assets, return on equity and Tobin’s Q). Two types of control variables are used in this study: firm level and country level.</p> <p>Findings: The findings deduced from the empirical results demonstrate that, on the one hand, ESG positively affects market performance, which supports value creation theory. On the other hand, ESG negatively affects financial and operational performance, which supports cost-of-capital reduction theory.</p> <p>Research limitations/implications: This study aims to find how sustainable disclosure can and does play a role in contributing towards performance of financial institutions to eventually achieve country’s sustainable development goals.</p>

The Attitude Of University Students Towards Celebrity Endorsements Through Social Media

<div>Authors</div> <div><ul style="list-style-type: none">Alshetti A.Al Mubarak M.</div>	<div>Abstract</div> <p>Purpose of the study: The study aims to identify the factors that influence students’ attitudes when celebrity endorsements are used through social media. It seeks to determine how effective endorsements are from the consumers’ point of view.</p> <p>Methodology: A study model was developed to show the effect of different factors on students’ attitudes. A quantitative approach was used for data collection to support the model. This study employed a survey method using a questionnaire to gather information from participants.</p> <p>Main findings: The findings show celebrity characteristics and social media advertisements affect students’ attitudes. The results were positive for students’ attitude towards celebrity endorsements through social media.</p> <p>Applications of the study: The study provides insights into how businesses should plan marketing campaigns and influence students’ attitudes towards celebrity endorsements through social media. Companies are encouraged to use social networks to track and respond to the opinions of their customers in a timely manner.</p> <p>Novelty/Originality of this study: There is a shortage of literature that is associated with celebrity endorsements through social media. This study aims to fill in the gap in knowledge and practice by identifying business opportunities and optimizing available marketing tools that can be used in order to gain a better image.</p> <p>© Alshetti and Mubarak</p>

Do Entrepreneurial Skills Affect Entrepreneurship Attitudes In Accounting Education?

Authors <ul style="list-style-type: none">Reyad S.M.R.Musleh Al-Sartawi A.Badawi S.Hamdan A.	Abstract <p>Purpose: The purpose of this paper is to present the evidence of accounting undergraduates’ attitude toward entrepreneurship, in particular, whether entrepreneurial skills developed in accounting education engender cognition of skills and intentions of starting a business.</p> <p>Design/methodology/approach: The study uses a χ^2 test statistic used to evaluate a logistic regression to gauge the effect of delivering six entrepreneurial skills (risk taking, critical thinking, problem solving, innovation, autonomy and need for achievement) on entrepreneurship attitudes (cognition of skills and intentions). Data consist of questionnaire responses obtained from 668 undergraduates attending Egyptian and Bahraini universities.</p> <p>Findings: The results reveal that accounting students perceive the following four entrepreneurial skills as a key for starting their own business: risk taking, critical thinking, problem solving and innovation. In addition, Egyptian students incline toward cognition, whereas Bahraini students head toward intentions.</p> <p>Practical implications: Some changes to accounting curricula are proposed to enhance entrepreneurial intention.</p> <p>Originality/value: This paper offers a new contribution as it focuses on the challenges and the considerations in the Arab World Universities.</p> <p>© 2019, Emerald Publishing Limited</p>

Dividi2: Reinforcing Divided Attention In Children With Ad/Hd Through A Mobile Application

Authors <ul style="list-style-type: none">Ivett Daniela Jácome V.Juan Sebastián Páez O.César Alberto Cóllazos O.Fardoun H.M.	Abstract <p>The Attention Deficit/Hyperactivity Disorder (AD/HD) is a neurological disorder that affects mainly children and teenagers. Some stats indicate that 5.29% of kids under 19 suffer this disorder. The children affected with it usually suffer difficulties to pay attention, to stay focused in a single activity, and might be excessively active.</p> <p>Often, this leads to issues at the school, or following simple commands. Some studies have identified that mobile applications could help in the treatment of children with AD/HD, by contributing to improve different types of attention. We propose Dividi2, a mobile application that aims to improve the split attention in kids with AD/HD.</p> <p>We use some concepts from the recommendations obtained in the EMOINAD guide, related to patterns for the creation of mobile interfaces for children with AD/HD. We also conduct a little experiment with 5 children and their parents in order to validate our prototype.</p> <p>The feedback obtained was very positive, with 100% of the children indicating they would play Dividi2 and 80% indicating they would play it with their friends.</p> <p>© 2019 Copyright is held by the owner/author(s). Additive Noise Level Estimation Based On Singular Value Decomposition (Svd) In Natural Digital Images

Authors <ul style="list-style-type: none">• Khmag A.• Malallah F.L.• Sharef B.T.	Abstract <p>True Noise level estimation is a seminal research of interest in the topic of digital image processing especially in blind noise removal methods. In this study, an estimation of additive white Gaussian noise (AWGN) in digital natural images is introduced.</p> <p>The adaptive noise level estimation is designed mainly based on singular value decomposition (SVD) of the natural images. The proposed technique contains two pivotal stages.</p> <p>Firstly, typical noise level estimate is utilized in order to manipulate the algorithm factors to be used in the second stage of the proposed technique. Secondly, the adjusted parameters are used in SVD in order to speed up the estimation processes and increase the accuracy rate of the noise level estimation.</p> <p>The experimental results depict that the proposed algorithm performs professionally over a several ranges of visual details which is presented in PSNR and MSE in AWGN removal methods.</p> <p>In addition, in terms of time complexity, the proposed algorithm in second stage shows significant performance in terms of computational load and achieves high running speed.</p> <p>© 2019 IEEE</p>

Effect Of 4 Weeks Of Whole-Body Vibration Training In Treating Stress Urinary Incontinence After Prostate Cancer Surgery: A Randomised Controlled Trial

Authors <ul style="list-style-type: none">Tantawy S.A.Elgohary H.M.I.Abdelbasset W.K.Kamel D.M.	Abstract <p>Background: Stress urinary incontinence is common in men after prostate cancer surgery. Rehabilitative interventions incorporate pelvic floor muscle training, biofeedback, electrical stimulation, lifestyle changes, or a combination of these strategies. However, little is known about the physiological impact of whole-body vibration for stress urinary incontinence after radical prostatectomy.</p> <p>Objective: To investigate the effect of whole-body vibration training on stress urinary incontinence after prostate cancer surgery.</p> <p>Design: Randomised controlled trial.</p> <p>Setting: Tertiary university hospitals.</p> <p>Participants: Sixty-one patients with mild stress urinary incontinence after radical prostatectomy.</p> <p>Intervention: Group 1 included 30 patients who performed pelvic floor muscle training and whole-body vibration training with a frequency and amplitude of 20 Hz/2 mm for the first two sessions and 40 Hz/4 mm for the rest of the intervention. Group 2 included 31 patients who performed pelvic floor muscle training alone. The intervention in both groups was conducted three times per week for 4 weeks.</p> <p>Main outcomes: Incontinence Visual Analogue Scale (I-VAS) score, International Consultation on Incontinence Questionnaire-Urinary Incontinence-Short Form (ICIQ-UI-SF) score and 24-hour pad test result.</p> <p>Results: I-VAS score, ICIQ-UI-SF score and 24-hour pad test result showed significant within-group differences at each assessment with the exception of the baseline and post-intervention I-VAS score in Group 2. For example, Group 1 I-VAS score had a median difference of 3.9 cm [95% confidence interval (CI) –4.0 to –3.8] from baseline to first follow-up, and a median difference of –2.0 cm (95% CI –2.2 to –1.8) at 4-week follow-up. Comparisons between the groups demonstrated significant differences in favour of Group 1 after 4 weeks of intervention and at follow-up for all measured parameters.</p> <p>Conclusion: Whole-body vibration training is an effective modality for treating patients with stress urinary incontinence after prostatectomy. Trial registration: Clinicaltrial.gov (NCT03325660).</p> <p>© 2018 Chartered Society of Physiotherapy</p>

Audit Committee Characteristics And Earnings Quality: Evidence From Bahrain Bourse

Authors <ul style="list-style-type: none">Albedal F.Hamdan A.M.M.Zureigat Q.	Abstract <p>This chapter investigates the relationship between the audit committee and earnings quality of listed companies in Bahrain Bourse and to examine whether those companies comply with the obligatory code of corporate governance.</p> <p>The sample of this study includes 40 companies listed in Bahrain Bourse for the period 2013-2017. The model of the study tested the relationship between the independent variables of audit committee characteristics and the dependent variable of earnings quality using pooled data regression.</p> <p>The findings of the study showed that the Bahraini listed companies comply and follow the code of corporate governance and some audit committee characteristics have an impact on earnings quality.</p> <p>© 2020, IGI Global. Impact Of Corporate Social Responsibility On Bank’s Corporate Image

<div>Authors</div> <div><ul style="list-style-type: none">Al Mubarak Z.Ben Hamed A.Al Mubarak M.</div>	<div>Abstract</div> <div><p>Purpose: The purpose of this study is to investigate the impact of the corporate social responsibility (CSR) on the corporate image in the banking sector. The focus of the study is on four main components of CSR, which are economic, legal, ethical and philanthropic.</p><p>Design/methodology/approach: A model was used in this study to show the impact of different CSR’s factors on corporate image; (240) banks customers were approached using a questionnaire, where (155) responses were received and (144) valid responses entered for analysis.</p><p>Findings: The findings revealed that customers perceive CSR activities as a main element when dealing with banks. The corporate image is strengthened when banks adopt such activities, and positive and significant relationships were statistically found between CSR activities and corporate image. These activities differ in importance as perceived by banks’ customers.</p><p>Research limitations/implications: Enlarging sample size, involving more stakeholders such as employees and managers, and replicating the study in other countries would enrich the findings.</p><p>Practical implications: Banks are advised to consider the study factors in their activities and act as champions of CSR for the welfare of the society to strengthen their corporate image.</p><p>Originality/value: Many studies have discussed the issue of CSR, but very few are found in the Middle East, particularly in Bahrain, and in the banking sector. This paper calls for more investigation in this area for a better understanding of CSR activities and their effects on the corporate image.</p><p>© 2018, Emerald Publishing Limited</p></div>

Analysis Of The Association Between Economic Growth, Environmental Quality And Health Standards In The Gulf Cooperation Council During 1980-2012

<div>Authors</div> <div><ul style="list-style-type: none">Bader Y.Ganguli S.</div>	<div>Abstract</div> <div><p>Purpose: The purpose of this paper is to investigate the validity of the environmental Kuznets curve (EKC) between gross domestic product (GDP) per capita and environmental indicators in the Gulf Cooperation Council (GCC) countries. Additionally, this paper also explores the relationship between health and income levels in the GCC to identify whether higher incomes necessarily affect overall health metrics.</p><p>Design/methodology/approach: The first part of this paper studies the relationship between GDP per capita and the greenhouse gases (GHGs) – carbon dioxide (CO2), nitrous oxide (N2O) and methane (CH4) (all per capita data). The second part of this paper explores the relationship between GDP per capita and the following health variables: life expectancy, infant mortality and child mortality – for GCC countries during 1980–2012. Unit root tests were conducted, followed by cointegration analysis, leading to Granger causality test and vector error correction model.</p><p>Findings: GCC states are highly dependent on fossil fuel production and hence depend on hydrocarbons for GDP growth. Most of the GCC states demonstrate lack of the EKC curve. However, there is evidence of U-shaped relationship between environmental pollutants and GDP per capita in kingdoms like Bahrain and Saudi Arabia (KSA). United Arab Emirates (UAE), on the other hand, demonstrates EKC, though not significantly. The study then explores the existence of potential relationship between health and GDP in the GCC, where it has been found that higher incomes have driven a better standard of living resulting in improved health metrics and higher life expectancy rates. Thus, growing incomes have played a positive role by improving health parameters and by offsetting some of the negative impacts from lack of environmental improvement as demonstrated by the absence of EKC in general in GCC.</p><p>Originality/value: GHG emissions data are individually and empirically examined for each country in the GCC. Furthermore, the study delves into the environmental problems that lead to health issues, which were initially caused by pollution. The results of the empirical analysis provide strong evidence that GCC countries need to rely less on fossil fuels, as lower productivity due to higher pollution reduces income and economic growth in most countries. © 2019, Emerald Publishing Limited</p></div>

The Impact Of Project Management Methodologies On Project Success: A Case Study Of The Oil And Gas Industry

Authors <ul style="list-style-type: none">Abdulla H.Al-Hashimi M.	Abstract <p>Oil and gas industry is complex and competitive and its projects are characterized by their importance and complexity.</p> <p>To achieve sustainability, oil and gas firms have to initiate and complete projects to scope, schedule, cost and quality. Hence, efficient Project Management Methodologies (PMMs) play a crucial role in successful project delivery.</p> <p>A conceptual model, adopted from the literature, was used to assess the influence of PMMs on project success.</p> <p>Based on a questionnaire data from 95 project management practitioners within the oil and gas industry in the Kingdom of Bahrain, correlational and regression analyses were used to test the research hypotheses.</p> <p>The quantitative study was backed with 17 semi-structured interviews to obtain in-depth understanding about the organizational PMMs.</p> <p>The major finding of the study revealed that applied PMMs have higher influence on project success in comparison with comprehensive PMMs.</p> <p>The companies in the oil and gas industry in Bahrain need to pay sharper attention to their methodologies and get them evolved with time to achieve higher success rates.</p> <p>© 2019 Hazem Abdulla et al., published by Sciendo</p>

Corporate Governance, Sharia’ah Governance And Performance: A Cross-Country Comparison In Mena Region

<div>Authors</div> <div><ul style="list-style-type: none">Buallay A.</div>	<div>Abstract</div> <div><p>Purpose: The performance and effectiveness of governance principles continue to be a matter of concern (Mollah and Zaman, 2015). Focusing on differences between conventional and Islamic banks, this study aims to examine the relationship between governance and bank’s operational (return on assets [ROA]), financial (return on equity [ROE]) and market performance (Tobin’s q [TQ]).</p><p>Design/methodology/approach: This study examined 127 banks within the Mena countries for the 10 years 2007 through 2016, for a total of 1270 observations. The study’s independent variable is corporate governance principles; the dependent variables are ROA, ROE and TQ. Also, the study uses bank- and country-specific control variables to help measure the relationship between governance and bank performance.</p><p>Findings: The findings deduced from the empirical results demonstrate that Sharia’ah governance significantly influenced ROA and ROE. However, corporate governance significantly influenced TQ. Furthermore, the results indicated that there were differences between Sharia’ah governance and corporate governance with regard to operational, financial and market performance.</p></div>

Improvement Of Crankshaft Mac Protocol For Wireless Sensor Networks: A Simulation Study

<div>Authors</div> <div><ul style="list-style-type: none">Hamiane M.Ahmed M.J.</div>	<div>Abstract</div> <div><p>Due to the dramatic growth in the use of Wireless Sensor Network (WSN) applications ranging from environment and habitat monitoring to tracking and surveillance, network research in WSN protocols has been very active in the last decade.</p><p>With battery-powered sensors operating in unattended environments, energy conservation becomes the key technique for improving WSN lifetimes. WSN Medium Access Control (MAC) protocols address energy awareness and reduced duty cycles.</p><p>The focus of this study is to investigate, through simulation, the effect of variations in various factors that influence the performance results of WSNs. Using MiXiM framework with OMNeT++ simulator, this simulation study proposes modifications in Crankshaft MAC protocol in order to improve its performance.</p><p>The impact of duration and number of slots, degree of connectivity among the nodes, mobility speed and mobility update interval and also, the impact of sending data packets without preambles are investigated.</p><p>Based on the simulation results, an improved version of the Crankshaft protocol for WSN is suggested and a comparative study of the performances of the original and improved protocol is presented. The results clearly indicate the superiority of the improved protocol over its original version.</p><p>© 2019 Institute of Advanced Engineering and Science. All rights reserved</p></div>

The Moderating Role Of Governmental Support In The Relationship Between Entrepreneurship And Economic Growth: A Study On The Gcc Countries

<div>Authors</div> <div><ul style="list-style-type: none">Saberi M.Hamdan A.</div>	<div>Abstract</div> <div><p>Purpose: The purpose of this paper is to find out the extent to which governments of the Gulf Cooperation Council (GCC) countries play a moderating role in the relationship between entrepreneurship and economic growth.</p><p>Design/methodology/approach: The study uses a 10-year time series (2006-2015) for six GCC countries: Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and United Arab Emirates. Secondary sources of data were collected from The World Bank database, general available statistics on the GCC, the Global Entrepreneurship Index from the Global Entrepreneurship and Development Institute (GEDI) and the Global Entrepreneurship Monitor (GEM) database.</p><p>Findings: Results indicate that governmental support has a significant moderating effect on the relationship between entrepreneurship and economic growth in the GCC. Furthermore, the strongest indicators of entrepreneurial investments in the Gulf have been found to be risk capital and high growth, which indicate a rapid growth in entrepreneurial investments. The lowest scoring indicators were found to be technology absorption and innovation process.</p><p>Research limitations/implications: Despite the necessary measures taken to assure standard results such as testing data validity, care should be taken when generalizing the research results mainly because the time series of the study (2006-2015) could have been affected by the International and Financial Crisis, though the study has taken this into consideration.</p><p>Originality/value: This study has clarified the significant role of GCC governments in moderating the relationship between entrepreneurship and economic growth. Thus, the findings of this study are important because they help the GCC governments recognize their significant role and hence to utilize this role by supporting new and existing entrepreneurs particularly through regulatory quality, risk capital, technology absorption and process innovation. Furthermore, this study proves the extent to which entrepreneurship can help enhance the GCC economic growth, hence elaborating the importance of the sustainable resource, such as the human capital, in achieving diversification of sources to move from an oil-based to a more diversified economy.</p><p>© 2018, Emerald Publishing Limited</p></div>

The Relationship Between Corporate Governance And Intellectual Capital:
The Moderating Role Of Firm Size

Authors <ul style="list-style-type: none">Buallay A.Hamdan A.	Abstract <p>Purpose: The purpose of this study is to examine the moderating role of firm size on the relationship between corporate governance (CG) and intellectual capital (IC) efficiency.</p> <p>Design/methodology/approach: The methodology was a pooled data for three years (2012-2014) for 171 listed firms, resulting in 489 observations.</p> <p>Findings: The findings revealed that the inclusion of firm size as a moderating variable has influenced positively only the relationship between CG principles and capital employed efficiency (CEE). Further, the finding showed that the two IC components namely, human capital efficiency and structural capital efficiency, tend to be higher with firms that high level of CG adoption. However, CEE tends to be higher with firms that have lower level of CG adoption. Other finding shows that CG index was significant with the three IC components.</p> <p>Originality/value: Such information will help the stakeholders, investors, decision-makers, regulators, policymakers and scholars to improve their knowledge about IC. Furthermore, it will be useful for firms to place their priorities regarding the internal system and financial plans for effective and efficient use of CG and IC.</p> <p>© 2019, Emerald Publishing Limited</p>

It Governance And Firm Performance: Empirical Study From Saudi Arabia

Authors <ul style="list-style-type: none">Hamdan A.Khamis R.Anasweh M.Al-Hashimi M.Razzaque A.	Abstract <p>This study provides additional evidence on information technology (IT) governance and its relationship to firm performance in emerging markets.</p> <p>It aims primarily to determine the level of IT governance in Saudi Arabian companies; it also aims at examining the impact of IT governance on the firm performance. The study target sample is 131 companies taken from 20 sectors of the Saudi financial market; during the year 2017.</p> <p>The researchers have used the IT-related backgrounds of the members of the board of directors as an indicator of IT governance. The researchers have also used another group of corporate governance indicators in addition to a set of control variables.</p> <p>The performance of the companies has been referred to as the operational performance which is represented as Return on Assets (ROA) and the financial performance as the Return on Equity (ROE).</p> <p>The descriptive results have been shocking. The study has shown a sharp decline in IT governance in Saudi companies; only 15% of companies have members of the board of directors with IT-related backgrounds, and the IT governance is not adopted or used in many important sectors.</p> <p>However, the regression analysis shows that there is a positive impact on IT governance only on the operational performance of Saudi companies.</p>

From Information Mismanagement To Misinformation – The Dark Side Of Information Management

Authors

- Stone M.
- Aravopoulou E.
- Evans G.
- Aldhaen E.
- Parnell B.D.

Abstract

Purpose: This paper reviews the literature on information mismanagement and constructs a typology of misinformation that can be applied to analyse project planning and strategic planning processes to reduce the chances of failure that results from information mismanagement. This paper aims to summarize the research on information mismanagement and provide guidance to managers concerning how to minimize the negative consequences of information mismanagement and to academics concerning how to research and analyse case studies that might involve information mismanagement.

Design/methodology/approach: Literature review accompanied by conceptual analysis.

Findings: Information mismanagement is widespread in organizations, so all those involved in managing and researching them need to be far more aware of the damage that can be done by it.

Research limitations/implications: The research is based on the Western society (Europe and North America). The same research should be carried out in other parts of the world. Also, all the case studies could usefully be investigated in more depth to apply the taxonomy.

Practical implications: Managers should be much more aware of their own and others’ tendencies to mismanage information to their own benefit.

Social implications: Stakeholders in public sector activities, including citizens, should be much more aware of the tendency of the government and the public sector to mismanage information to justify particular policy approaches and to disguise failure.

A New Block Matching Algorithm Based On Stochastic Fractal Search

Authors

- Ourchani A.

Abstract

Block matching algorithm is the most popular motion estimation technique, due to its simplicity of implementation and effectiveness.

However, the algorithm suffers from a long computation time which affects its general performance. In order to achieve faster motion estimation, a new block matching algorithm based on stochastic fractal search, SFS, is proposed in this paper.

SFS is a metaheuristic technique used to solve hard optimization problems in minimal time. In this work, two main contributions are presented.

The first one consists of computing the motion vectors in a parallel structure as opposed to the other hierarchical metaheuristic block matching algorithms. When the video sequence frame is divided into blocks, a multi-population model of SFS is used to estimate the motion vectors of all blocks simultaneously.

As a second contribution, the proposed algorithm is modified in order to enhance the results. In this modified version, four ideas are investigated. The random initialization, usually used in metaheuristics, is replaced by a fixed pattern.

The initialized solutions are evaluated using a new fitness function that combines two matching criteria. The considered search space is controlled by a new adaptive window size strategy.

A modified version of the fitness approximation method, which is known to reduce computation time but causes some degradation in the estimation accuracy, is proposed to balance between computation time and estimation accuracy.

Board Independence, Frequency Of Meetings And Performance

<div>Authors</div> <div><div><div></div></div><div><div>Musleh Alsartawi A.</div></div></div>	<div>Abstract</div> <div><p>Purpose: This study aims to investigate the relationship between board structure and performance from an Islamic point of view.</p><p>Design/methodology/approach: Consequently, the researcher developed a multiple linear regression model to investigate the nature of this relationship, whereby return on assets (ROA) was used to measure the performance of listed Islamic Banks in Gulf Cooperation Council, covering the period between 2013 and 2016.</p><p>Findings: The results indicated a negative relationship between board structure and the performance of Islamic banks.</p><p>Research limitations/implications: Because the current study only used accounting-based performance indicator (ROA), the researcher suggests expanding the framework of this study through the addition of market-based performance indicators such as Tobin's Q.</p><p>Practical implications: Therefore, the researcher recommends that regulators of Islamic banks in the GCC need to develop a set of strict restrictions for the selection of independent members of the board and to minimize the meetings of the board to reduce the cost of preparing information and the information asymmetry, thus improving performance.</p><p>Originality/value: This study provides guidelines regarding the appropriate number of independent directors and board meetings that will result in reduced monitoring costs and improved profits. © 2018, Emerald Publishing Limited.</p></div>

A New Approach For Scheduling Tasks And/Or Jobs In Big Data Cluster

<div>Authors</div> <div><div><div></div></div><div><div>Hadjar K. Jedidi A.</div></div></div>	<div>Abstract</div> <div><p>400 hundred million tweets are sent each day, 4.75 billion multimedia content is shared every day on Facebook, and an estimated of hundreds of hours of video are uploaded to YouTube every minute.</p><p>Moreover, also IOT devices (RFID and WIFI wearable devices) are generating a huge number of data per seconds. During the last two years, the amount of data that has been created is about 90% of the whole data created so far.</p><p>All these facts require clusters of computers with high specs in order to treat them. Knowing that the prices of computers are continuously dropping from year to another, almost all companies have started their Big Data projects.</p><p>The return on investment (ROI) of such a project is beneficial to companies in terms of business. Since the advent of Big Data, a lot improvement is been done in order to optimize the usage of the resources (especially RAM) and to reduce the required amount of time needed for running Big Data projects.</p><p>Still, effort needs to be done for the scheduler for efficiently scheduling the tasks inside the DataNodes of the Big Data Cluster. In this paper, we propose a new approach for scheduling tasks and/or jobs in Big Data Cluster in which mainly focus on optimizing the assignment of tasks to the data nodes by the NameNode.</p></div>

The Associations Between Audit Firm Attributes And Audit Quality-Specific Indicators: A Meta-Analysis

<div>Authors</div> <div><div><div></div><div>Alareeni B.A.</div></div></div>	<div>Abstract</div> <div><p>Purpose: This study aims to investigate the associations between audit firm attributes (i.e. audit firm size, non-audit services, auditor industry specialization and auditor-client tenure) and specific indicators of audit quality. It also aims to test whether these relationships are moderated by a set of other factors like legal system and US versus non-US settings.</p><p>Design/methodology/approach: The method of Hunter et al. (1982) is used as a meta-analysis technique to test the study hypotheses and achieve the study aims. A total of 71 published papers from 1992 to 2017 are included.</p><p>Findings: There are significant positive relationships between all audit firm attributes and audit quality. Additionally, the associations between all audit firm attributes and audit quality are moderated by proxies for audit quality. Furthermore, these associations are moderated by other variables, such as US and non-US studies, pre-SOX and post-SOX periods, the legal system, the strength of auditing and reporting standards and country classification (developed or developing country).</p><p>Research limitations/implications: The number of studies is insufficient for some variables, and therefore, the results should be interpreted with caution. In addition, the analyzed studies include several proxies, and thus, the number of studies is inadequate for the incorporation of other factors in the meta-analysis (e.g. audit firm experience and audit firm reputation).</p></div>

Promise And Delivery Gap Of Corporate Social Responsibility

<div>Authors</div> <div><div><div></div><div>Al Mubarak M.</div></div></div>	<div>Abstract</div> <div><p>This study reviews corporate social responsibility (CSR) literature to find out what firms usually promise society and what the latter actually receives due to corporations actions.</p><p>Any differences between what firms promise and what they actually deliver to different stakeholders cause a gap. A gap was found between what firms say and what they actually deliver.</p><p>This gap is attributed to many reasons including different perceptions and expectations of stakeholders, limited resources of firms, and low level of stakeholder involvement in firms’ CSR activities.</p><p>Firms to be efficient and successful, must manage stakeholders’ perceptions and expectations and involve them in CSR activities. Clear communication with the stakeholders who are influenced by corporate social responsibility activities is vital. Although many studies have reviewed CSR activities over the recent decades, only few have focused on the gap between promise and delivery.</p><p>This study makes the review unique for many reasons including the betterment of society, to better firms’ performance, generate a better corporate image, and in order to allow for efficient investment.</p><p>© 2019 Primrose Hall Publishing Group</p></div>

Bridging The Sustainability Gap Of Corporate Social Responsibility Strategy

<div>Authors</div> <div><div><div></div></div><div>Mubarak M.A.</div></div>	<div>Abstract</div> <div><p>The purpose of this study is to identify potential sustainability gap(s) in the corporate social responsibility (CSR) strategy, discuss reasons for such a gap(s) and put forward suggestions to bridge the gap(s) that help achieving corporate sustainability (CR).</p><p>This study uses a secondary source to reach the findings and draw conclusions. Two figures/models were used to illustrate the possible gap(s) and the right fit to bridge the gap(s).</p><p>A sustainability gap was found in CSR activities for firms that are having imbalance, segregation, and priority mismatch between the three main CS/CSR components namely, society, environment, and economy.</p><p>The gap occurs if firms do not carefully manage stakeholders' expectations, are confused in priorities, do not have enough budget for sustainable CSR activities, and do not work on building trust with stakeholders.</p><p>To bridge the gap and make CSR more sustainable, firms are advised to manage stakeholders' expectations, build trust, put a long-term strategy to measure the impact of CSR activities, support such a strategy with an appropriate budget, and work on continuous improvements.</p><p>Although many studies have reviewed CSR activities, few have focused on the CSR sustainability gap. This study contributes to the topic of sustainable CSR by focusing on reasons of possible gap(s) and ways to bridge such gap(s).</p><p>© 2019 Primrose Hall Publishing Group</p></div>

Corporate Sustainability As An Antecedent To The Financial Performance: An Empirical Study [Zrównoważone Przedsiębiorstwo Jako Determinanta Wyników Finansowych: Badanie Empiryczne]

Authors <ul style="list-style-type: none">Abughniem M.S.Al Aishat M.H.Hamdan A.M.	Abstract <p>This paper investigates the impact of sustainability reporting on firm performance. The sample included 186 firms from Amman Stock Exchange during the period of 2014-2017.</p> <p>To achieve this goal, the study measures firm performance using Return on Assets and Tobin’s Q. By using panel random-effect regression, the study found the sustainability reporting is significantly related to performance.</p> <p>Overall, our study results are providing are providing the evidence for the significant and negative influence from environmental responsibility, responsibility of human resource and size and size on return on asset.</p> <p>Whereas the influence of SR on Tobin’s Q is significantly positive but the influence from environmental responsibility, responsibility of human resource and size is significantly negative.</p> <p>More specifically, for the industrial sector, environmental responsibility, responsibility of human resource and size are causing a decline in return on asset, for Tobin’s Q under financial sector, negative influence by social responsibility, and size is observed.</p>

The Impact Of m-Learning On Business Students' Performance

<div>Authors</div> <div><ul style="list-style-type: none">Albinali A.Hamdan A.</div>	<div>Abstract</div> <div><p>Recent developments in the field of technology have led to a renewed interest in classroom learning method. there has been a dramatic increase from the use of electronic lessons to the integration of mobile learning “M-learning” into the education which has vastly been adopted by students.</p><p>Despite its convenience, flexibility and portability. Lack of empirical evidence has appeared to drawback the effectiveness of mobile learning on students' academic performance and learning attitude.</p><p>The purpose of this paper is to explore the impact of M-learning in the form of learning applications and social media platforms on teaching and learning commercial subjects in high school students and their performance in the kingdom of Bahrain.</p><p>It is conducted to understand how M-learning affects the learning process, and in which way it affects the learner's' ability and how it facilitates the learner's' understanding of the different subject matter.</p><p>This paper attempts to demonstrate the argument of using M-learning as a as a break from routine or if it does have a stronger more positive impact on students' performance.</p><p>The importance of this research paper is to help raise student's grade point average and grades. Furthermore, eliminate any methods that are redundant and that have a poor impact on the learning process and affect students understanding of the subject material negatively.</p><p>© The Authors, 2019. E-Learning And Learner Knowledge Sharing Quality: Ahlia University As A Case Study

<div>Authors</div> <div><div><ul style="list-style-type: none">Reyad S.Badawi S.Alhalwachi L.F.Hamdan A.Razzaque A.Al-Sartawi A.</div></div>	<div>Abstract</div> <div><p>E-learning is an emerging approach in universities where self-directed students and motivated learning increases the utilization and integration of knowledge sharing in e-learning.</p><p>The learning virtual community is a domain where inquiries, interest or needs, are shared. Such circumstances lead to interactions that allows virtual participants to learn from each other.</p><p>This study examines the impact of e-learning on learner knowledge sharing quality. To fulfill the requirement, a quantitative approach was used to measure the e-learning approach developed at Ahlia University in Bahrain, and whether it directs the students to the required knowledge sharing quality.</p><p>A constructed questionnaire has been developed and a sample of 376 Ahlia University respondents generalizable over the College of Business and Finance. The study concluded that there's an impact of e-learning on learner knowledge sharing quality and this is due to the e-learning environments at Ahlia University that are composed of those technologies that aid in teaching and learning; such as Moodle, where students log-on to attain blended e-learning experiences. This study and its conclusion overcome the gap exists in which students expressed an influential role of self-directed and motivation for learning and knowledge sharing in e-learning environments. © The Authors, 2019. Students' Learner-Readiness Empowers Their Imaginative-Capacity As They Interact While E-Learning

<div>Authors</div> <div><div><ul style="list-style-type: none">Razzaque A.Hamdan A.</div></div>	<div>Abstract</div> <div><p>Globally, knowledge economies are transforming to creative economies. Similarly, the Middle East region aligned initiatives empowering human-capital with creativity to generate innovation.</p><p>In the Middle East, the Gulf-Corporation-Council (GCC) countries understand the importance of education to harness creative economies. GCC students continue resisting interacting on e-learning platforms by sharing knowledge even-though this is vital for enhancing imagination.</p><p>This empirically under researched area in developing countries is assessed by us within a private higher-education institution in the GCC (Bahrain).</p><p>Research Design: This deductive approach proposes a literature driven conceptual-model, assessing students' learner-readiness (self-directed learning and motivation-for-learning) on imagination-capacity (IC); when interacting to share knowledge during e-learning. Three hypotheses were empirically tested thru an online-survey; with data collected from undergradbusiness- students using Moodle at Ahlia University (in Bahrain); and analyzed using Confirmatory Factor Analysis and Structural Equation Modeling.</p><p>Findings: All hypotheses were supported via a fit model, baring theoretical and practical implications; signifying learner-readiness positively influences qualityknowledge- shared-behavior, and IC; during learnerinteraction, with quality-knowledge-sharing-behavior absolutely influencing IC. © 2019.</p></div>

Petroleum Production Sharing Contracts In The Middle East: Application Of Economic Evaluation And Decision-Making Modeling

<div>Authors</div> <div><div><div></div><div>Al Janahi A.</div></div><div><div></div><div>Kukreja G.</div></div><div><div></div><div>Hamdan A.</div></div></div>	<div>Abstract</div> <div>In this Study, the evolution and history of petroleum contracts is discussed with a focus on the recent major shift witnessed from joint operating agreements (JOA) and Concession contracts to production sharing agreements (PSA) due to the increase in the complexity of operations and funding difficulties especially from the government's side.</div> <div>In addition to that, the fiscal system of PSA's is studied as a legal instrument to allocate risk between the parties, identify ownership of assets, commitments and operational control.</div> <div>This study aims to figure out the application of economic evaluation for PSA's using discounted cash flow analysis (DCF) which is considered to be powerful in evaluating the investment performance by calculating net present value (NPV) of cash flows and the internal rate of return (IRR).</div> <div>The estimated production profile submitted in the PSA of interest was exaggerated. When a Monte-Carlo simulation was run the riskier profile (P10) was the closest to the PSA production forecast.</div> <div>However, in such agreements usually the mid case scenario (P50) is taken into consideration. The NPV for the first 10 years in this project is around \$0.45 Billion compared to the total NPV calculated using the economic model \$1.26 Billion. However, the recent instability of the oil price in the last 10 years what causes this project in particular not to meet the target so far.</div>

Learning Readiness When Sharing Knowledge While E-Learning
[Preparación Para El Aprendizaje Cuando Se Compar-Te El Conocimiento Mientras Se Aprende A Distancia.]

Authors	Abstract
<div><ul style="list-style-type: none">Razzaque A.Al-Hashimi M.Hamdan A.M.Musleh A.Hassan A.Aldahean E.S.Awwad B.Reyad S.</div>	<p>Past research indicates the importance of assessing the role of higher education (HE) students’ Learning Readiness’s (LR’s) two-dimensions (Self-Directed Learning-SDR and Motivation for Learning-MFL) on learning behaviors (Knowledge Sharing Quality-KSQ) during e-learning in developing countries.</p> <p>This article is a critique of a literature review led to a conceptual framework which in turn was empirically investigated (correlation analysis, using Pearson and Spearman corre-lation), with findings shedding new contributions to knowledge, and opening new avenues for the research in progress.</p> <p>This deductive cross-sectional research confirms this role via an adopted survey, data-collection from 253 Ahlia University undergraduate students who constantly participate in e-learning practices on Moodle. Empirical analysis of this study confirmed a positively significant relation between SDL → KSQ and, MFL → KSQ. Limitations and implications are discussed in this article.</p> <p>The empirical findings of this article are new contributions to knowledge, which are particularly generalizable to Ahlia University’s undergraduate business students.</p>

Prediction Of Non-Communicable Diseases Using Class Comparison Data Mining

Authors	Abstract
<div><ul style="list-style-type: none">Al-Dallal A.Al-Moosa A.</div>	<p>Data mining is recognized as an effective technique for extracting and retrieving valuable information or decision from the vast available data. Because of the nature of the functionality of medical centers and hospitals, their data centers contain a collection of valuable information about their patients.</p> <p>By properly processing these data, different applications can be developed to utilize them. These applications could participate in predicting and diagnosing particular diseases.</p> <p>Two prime diseases realized to impact the overall health of society are heart diseases and diabetes. The presented work intends to develop and test a software application that helps doctors and practitioners predict the emergence of noncommunicable diseases (NCDs) such as diabetes and heart diseases.</p> <p>The application applies the predictive data mining model to the medical records which are collected from the Bahrain Defense Force Hospital (BDFH).</p> <p>The BDFH doctors evaluated the application and executed it on actual patients. The results obtained are accurately matching the expectation of doctors in BDFH.</p> <p>All kinds of risks are categorized appropriately according to the defined categories. As a conclusion, this application can help doctors in making proper decisions toward patient health risks.</p> <p>In addition, data mining is more supportive for the health sector and is essential for exploring the knowledge to be used in the health care sector. © 2019 ASTES Publishers. Public support programs and their impact on SDEs’ growth

Authors <ul style="list-style-type: none">Ahmed A.A.H.Al-Hashimi M.Hamdan A.	Abstract <p>Every year, public business development programs support thousands of small and medium enterprises (SMEs) within the Kingdom of Bahrain. Millions of Bahraini Dinars have been injected into small and medium enterprises projects. This study aims to measure the impact of business support programs on the growth of SMEs within the Kingdom of Bahrain, in particular, the financial aspect and SMEs’ skill-development aspect.</p> <p>Also, researchers scan the current situation and try to explore the factors affecting SMEs’ owner decisions to obtain the support of those programs. The researchers adopted mainly a quantitative approach and supported it with a qualitative approach. A questionnaire of 27 questions was designed to measure the relationship between the dependant and independents variables. A correlation test was conducted to analyse the existing relationship and regression analysis to determine the kind of relationship.</p> <p>Results show a positive correlation between financial aspects related to public support programs and the growth of SMEs. There was a positive correlation detected at a rate of $r= 0.908$, with a significant level that is less than 0.01. Also, the same result was noticed in regard to SMEs’ owner skill-development and the growth of SMEs where the rate of r was 0.763, with a significance level that is less than 0.01.</p> <p>Hence, the researchers concluded that variables are correlated positively. Regression results also supported the research hypothesis where P value result for Financial Aspects related to Public Support Programs and the growth of SMEs was=.000 (p-value = 0.000 < 0.05).</p> <p>This is considered evidence that there is a significant impact of Financial Aspects related to Public Support Programs on the SMEs’ growth, at 0.000 level of significance (p-value = 0.000 < 0.05).</p> <p>The same result could be noticed in regard to the significant impact of two SMEs’ skill-Development aspects related to Public Support Programs on the SMEs’ growth, at 0.000 level of significance (p-value = 0.000 < 0.05).</p> <p>The research revealed that there is a positive significant impact for public support programs on the growth of SMEs within the kingdom of Bahrain, hence the researchers encourage entrepreneurs to apply and obtain the assistance of those program in order to enhance their competencies and achieve prosperity and growth.</p> <p>© Proceedings of the 14th European Conference on Innovation and Entrepreneurship, ECIE 2019 All rights reserved.</p>

The Role Of Job Enrichment On Employees’ Innovation In Services Sector: Telecommunication Companies’ In Egypt

Authors <ul style="list-style-type: none">Badawi S.Reda Reyad S.M.Al-Hashimi M.Al-Sartawi A.Hamdan A.	Abstract <p>Telecommunication sector in Egypt is one of the most important sectors of economy and considered as the largest market in North Africa. Although revenues are stable, profit margins and capital expenditures have fallen caused by weakness of local currency and trials of economic development.</p> <p>The government recently secured billions of dollars in funding to develop technology parks to create new jobs opportunities and attract investor’s interest to the capabilities of this sector to compete globally.</p> <p>Consequently, this paper presents the concept of Job Enrichment as one of the human resources management tools through giving more experiences, responsibilities and growth opportunities to test its effect on employees’ innovation as a competitive advantage to keep up with the global competition.</p> <p>A questionnaire was distributed on a simple random sample of 384 employees from the Telecommunication sector in order to collect the primary data to test the research hypotheses and to analyze findings based on their responses.</p>

Exploring The Contributing Factors In Changing Cash-Flow Quadrant From Entrepreneurs’ Insight

Authors <ul style="list-style-type: none">Amara A.B.H.Yaseen F.H.	Abstract <p>The Cash-flow quadrant (CFQ) is increasingly recognized as an important concept that explains the movement of money and illustrates the different ways of generating income.</p> <p>Although CFQ is well-established in the literature regarding the combination of four specific methods for identifying unique financial paths (Employees (E); Small business owner (S); Big business owner (B) and Investor (I)) to generate income, the factors contributing to the transition from one quadrant to another are rather neglected.</p> <p>Specifically, the way in which specific skills, particular ways of thinking, different levels of education and personalities contributing dynamically to financial path transfer has not received enough attention.</p> <p>To fill this gap, we examined how entrepreneurs change their financial path (s) and go beyond job security to achieve greater financial freedom. Our study examines the attributes of the Cash-flow quadrant and shows how much the push-pull factors are of great importance for the Cash-Flow Quadrant transition in achieving financial freedom.</p> <p>Our research synthesizes the literature on push-pull factors including Financial Freedom (FF), workplace condition (WC), Independency (ID), Salary level (SL), Family Life-building (FL) and Saving for Retirement (SR) and extends knowledge on the dynamic CFQ transitions from a push-pull factor-based perspective.</p>

The Role Of Employee Relations Management In Improving Employee Performance

Authors <ul style="list-style-type: none">Essa M.Wadi R.A.	Abstract <p>This research investigates the relationship between Employee Relationship Management (ERM) and employees’ performance in the telecommunication sector in the Kingdom of Bahrain. ERM’s main components considered in this research include improving retention, internal culture, supporting creativity and job security.</p> <p>The data of the research was collected using a questionnaire which was distributed to 343 employees working in the telecommunication sector. The findings indicated that there is a positive relationship between employee relationship management components and employee performance.</p> <p>Thus, the researchers recommend that firms should pay special attention to ERM components by carefully incorporating them into their strategy to develop and maintain employees’ skills, abilities, motivation to enable them to carry out their duties and tasks as essential variable components of its great effect on employee performance in the long term.</p> <p>© 2019 Academic Conferences Limited. Stakeholder Theory, Intellectual Capital And Risk Sharing:proposed Framework

<div>Authors</div> <div><ul style="list-style-type: none">Sarea A.Elshaker A.H.Shaikh Z.H.Imeri A.Hidayat S.Al-Sartawi A.M.</div>	<div>Abstract</div> <div><p>The paper proposes a framework to explore the relationship between stakeholder theory, intellectual capital and risk sharing.</p><p>The paper employs content analysis approaches to explore the relationship between stakeholder theory, intellectual capital and risk sharing. Stakeholder theory is more suitable if it is used to explain the Islamic concepts of employer employee relationships in line with the teachings of the “Quran and Hadith” and the practices of Islamic system.</p><p>Islamic system treats the stakeholders as equity shareholders. Stakeholders not only share profits from their contributions.</p><p>They prioritize the use of Islamic values as the basis of all their business activities. The stakeholder theory model isn’t really a strategic framework - it won’t facilitate to innovate or develop business directly. To understand the true benefits of stakeholder theory, we have to look at a more societal /ethical level.</p><p>This includes “Intellectual capital” which offers a prospective source of sustainable competitive advantage and is assumed to be the basis of economic growth and the “Risk sharing” practice of Islamic system where each participant must share the profit and the risk of loss from a transaction, makes it more stable and equitable.</p><p>The main finding, the proposed model is designed based on the literature review to conceptualize the relationship between stakeholder theory, intellectual capital and risk sharing.</p></div>

Entrepreneurship In Emerging Economies: The Role Of Corruption And Rule Of Law

Authors <ul style="list-style-type: none">Ghura H.Harraf A.Hamdan A.	Abstract <p>Although emerging economies have become key players in the new global economy, they are struggling to sustain economic growth and development. In this realm, entrepreneurship has been considered as a driving force for economic growth and development.</p> <p>This study contributes to the literature of entrepreneurship by examining the moderating role of corruption on the relationship between rule of law and entrepreneurial activity, measured by new entry rates, in 42 emerging economies between 2002 and 2014.</p> <p>It suggests that the effectiveness of the rule of law on entrepreneurial activity is contingent upon the lower levels of corruption. Our results showed that rule of law has a significant effect on new entry rates only when control of corruption is strong. Implications are drawn for aspiring entrepreneurs, policy and future research.</p> <p>© Proceedings of the 14th European Conference on Innovation and Entrepreneurship, ECIE 2019. Joining The Green Movement: The Relationship Between Green Innovation And Business Performance

Authors <ul style="list-style-type: none">Al-Sartawi A.M.Al-Afifi A.Badawi S.Hamdan A.Reyad S.Elshaker A.H.	Abstract <p>The literature shows a growing interest in the relationship between environmental (“Green”) innovation and the financial performance of organizations.</p> <p>Green innovation is the new or modified techniques, products, processes and systems implemented by organizations to reduce or prevent environmental harm.</p> <p>The aim of this paper, therefore, is to raise awareness on the concepts of environmental protection, sustainable development, and green innovation strategies.</p> <p>Specifically, the paper looks more closely at the latter dimension of organizational performance: financial performance of listed firms in the Kingdom of Bahrain.</p> <p>The sample of the study included 41 firms spread across three primary sectors operating in the Kingdom of Bahrain, namely the Financial Sector, Services sector and the Industrial sector.</p> <p>This paper followed a content analysis approach to complement the information gathered through the checklist developed by the researcher to measure the level of green innovation by the sample of listed firms.</p> <p>Financial reports for the year 2017 were obtained from the websites of the sample firms and other financial information and ratios were obtained from the Bahrain Stock Exchange website.</p> <p>The findings indicate a positive and significant relationship between return on assets and green innovation practices and strategies.</p>

Acceptance And Usability Of Medical Informatics Among Physicians In Bahrain

Authors	Abstract
<ul style="list-style-type: none">Aqleh M.M.AL-Hashimi M.S.Hamdan A.Razzaque A.	<p>Purpose: the main objective is to explore the usability of medical mobile applications and to study the factors affecting the acceptance of the Electronic Medical Record Systems (EMRs) among physicians in Bahrain.</p> <p>Methodology: The study followed a quantitative design employing a questionnaire based on the Extended Technology acceptance Model (TAM2) to test the relationship between the acceptance of EMRs and the factors affecting it; System Perceived Usefulness (PU), Perceived Ease of Use (PEOU), Job Relevance and Output Quality in addition to descriptive questions to understand the extent of use of the mobile medical Apps among the physicians. The study covered 53 physicians from various hospitals across Bahrain. SPSS was used to analyze data.</p> <p>Findings: Acceptance of EMR is positively affected by US, EOU, Job Relevance and Output Quality and thus accepts all the intended hypothesis.</p> <p>Implication: the research emphasizes on the role of hospitals' management to introduce the importance, usefulness and impact of such technological advancements on the physicians work flow and quality of patient care and to provide effective training and support on how to use the implemented EMR so end-users may own the system. © Copyright 2019 IADIS Press All rights reserved.</p>

The Moderating Role Of M-Learning Activities In The Relationship Between Students' Social Capital And Knowledge Sharing

Authors <ul style="list-style-type: none">Al-Ansari M.A.Hamdan A.Razzaque A.Reyad S.Al-Sartawi A.	Abstract <p>Purpose: Current education system is transforming from e-learning to m-learning. The benefit of m-learning is particularly important when it comes to motivating one to self-direct his/her learnings online. Though past research has assessed what role social capital theory plays on knowledge sharing quality, in virtual environment, scant research has assessed the moderation of positive emotions an m-learning support tools, particularly for (1) higher education sector students as well as (2) developing countries. However, the success of such a statement has not been properly documented in the past research. As the result, the aim of this study is to empirically assess the role of Social Capital Theory on Knowledge sharing, when moderated by m-learning.</p> <p>Research Design: This study is a deductive research approach that initiated with a literature review. Upon identifying a gap in research, research questions were designed. Based on the research questions a conceptual model was proposed and hence this model proposed three hypotheses.</p>

Assessing The Relationship Between Information Transparency Through Social Media Disclosure And Firm Value

Authors	Abstract
<ul style="list-style-type: none">Musleh Al-Sartawi A.M.A.	<p>The aim of this paper is to investigate the relationship between social media financial disclosure and firm value of the GCC listed firms.</p> <p>To answer to research questions, the researchers collected cross-sectional data from a sample of 241 firms listed in the financial stock markets of the GCC for the year 2017.</p> <p>An Index was used to calculate the total level of social media financial disclosure where the SMFD for each firm was calculated by dividing the total earned scores of the firm by the total maximum possible scours appropriate for the firm.</p> <p>The findings show that the 84% of firms in the GCC countries use social media, while 70% of these firms use SM for financial disclosure.</p> <p>The results also confirm the hypothesis that enhanced disclosure levels through various social media channels of GCC listed firms significantly influence the firm value of these firms. These results have implications for both social media disclosure literatures and value relevance literatures in the GCC countries.</p> <p>© 2019 IADIS Press. All rights reserved</p>

Impact Of Educational Technology On Students' Performance

Authors	Abstract
<ul style="list-style-type: none">Murad M.Razzaque A.Hamdan A.Benhamed A.	<p>The current study is focused on the impact of educational technology on students' performance in the secondary stage. Selection of this stage is attributed to fact that it is impossible to focus on all the stages as there are about 130 thousand students in all stages which is a very big population.</p> <p>Also, students of universities who are about 31 can provide clearer and more accurate data. The sample was selected randomly with the electronic sample calculator showing that the minimum number is 380 individuals.</p> <p>The questionnaire was circulated electronically via university administration in the four governorates. The received responses were 342 indicating that the return rate is 90%.</p> <p>The researchers made use of the descriptive statistical analysis to answer the research questions. The data analysis processes guided the researchers to find out that universities effectively apply technology-based education both in terms of perceived ease of use and perceived usefulness as indicated by the mean scores. It was found out that there is a significant impact of technology-based education on students' performance.</p>

Abstract

OBJECTIVES: Psychiatric depression disorder is common in patients with systolic congestive heart failure (HF), and both conditions share underlying pathophysiological mechanisms. The incidence rate of depression disorder has clearly increased with the increase in HF manifestations in recent decades. Depression disorder is considered an independent predisposing factor for hospitalization, disturbed functional performance, and high rates of morbidity and mortality in HF patients. This randomized controlled study was designed to examine the impacts of low-to moderate-intensity aerobic exercise training on depression status in patients with systolic congestive HF.

METHODS: A total of 46 systolic congestive HF patients with depression (40-60 years of age) were randomized to receive twelve weeks of mild-to moderate-intensity aerobic exercise plus standard medical treatment (exercise group) or standard medical treatment without any exercise intervention (control group). Depression status was examined using the validated Patient Health Questionnaire-9 (PHQ9) pre-and post-intervention at the end of the study program.

RESULTS: No significant differences were observed between the exercise and control groups in demographic data or clinical characteristics (p>0.05). Both study groups showed a significant reduction in depression status at the end of the 12-week intervention (p<0.05). The comparison between the mean values of the depression scores showed significant differences between the two groups after 6 and 12 weeks of the intervention, indicating a greater reduction in depression scores in the exercise group than in the control group (p<0.05).

CONCLUSIONS: Twelve weeks of a low-to moderate-intensity aerobic exercise program was safe and effective for reducing depression severity in patients with systolic congestive HF. Low-to moderate-intensity aerobic training should be recommended for cardiac patients, particularly those with HF-related depression.

Factors Influencing Internal Shariah Audit Effectiveness: Evidence From Bahrain

Authors

- Ahmed A.A.K.
- Sarea A.M.

Abstract

It is this research's objective to analyze factors that cause an effective internal Shariah audit among the Islamic Financial Institutions (IFIs) in Bahrain.

The questionnaire method has been employed to examine the said topic. The questionnaire's primary source of information was the Accounting and Auditing Organizations for Islamic Financial Institutions (AAOIFI) Governance Standards.

Meanwhile, the respondents are consisted of 52 IFIs' head of internal Shariah audit department. These IFIs are registered with the Central Bank of Bahrain.

To analyze those relationships the structural equation method (SEM) via SmarPLS3.0 has been adopted.

The study has found that the effective execution of internal Shariah audit is positively linked with the competency and performance of internal Shariah audit.

Meanwhile, the other two variables, i.e. being independent and Shariah supervisory board have been discovered to be positively related with internal Shariah audit effectiveness. Nonetheless, there is no significant contribution.

Overall, all the variables contribute 63.2% to IFIs' internal Shariah audit effectiveness.

Abstract

Nowadays, hand gesture recognition (HGR) is getting popular due to several applications such as remote based control using a hand, and security for access control.

One of the major problems of HGR is the accuracy lacking hand detection and segmentation. In this paper, a new algorithm of hand detection will be presented, which works by tracking fingers smartly based on the planned path.

The tracking operation is accomplished by assuming a point at the top middle of the image containing the object then this point slides few pixels down to be a reference point then branching into two slopes: left and right.

On these slopes, fingers will be scanned to extract flip-numbers, which are considered as features to be classified accordingly by utilizing the expert system.

Experiments were conducted using 100 images for 10-individual containing hand inside a cluttered background by using Dataset of Leap Motion and Microsoft Kinect hand acquisitions.

The recorded accuracy is depended on the complexity of the Flip-Number setting, which is achieved 96%, 84% and 81% in case 6, 7 and 8 Flip_Numbers respectively, in which this result reflects a high level of finite accuracy in comparing with existing techniques. Copyright

Abstract

From the Collaboration Engineering approach it is possible to design collaborative processes that could ensure a collaborative effective work among participants of a working group integrating the available resources and skills.

This paper describes the use of Collaboration Engineering for the design of processes that support collaborative activities raised by the Usability and Accessibility Engineering Process Model (MPlu+a) for Requirements Analysis Phase in developing usable and accessible interactive systems. Analyzing Collaboration In The Gamification Process Of Childprogramming

Authors <ul style="list-style-type: none">Chimunja A.M.Collazos C.A.Hurtado J.A.Fardoun H.M.	Abstract <p>According to Jeannette Wing computational thinking involves problem solving, system design and understanding of human behavior, making use of the fundamental concepts of informatics, thus, it means that boys and girls acquire skills to solve problems in different contexts through informatics and software programming in different devices.</p> <p>For the purpose of supporting the initiatives to strengthen the development of computational thinking, the Software engineering research and development group (IDIS) of the University of Cauca, in 2012 formalized the Childprogramming model to support the development of software oriented to children, based on strategies of collaborative learning, agile software development, and ludic learning.</p> <p>Since then, this model has been improved, such as, the Childprogramming-G model that looks for the improvement of the ludic learning, offering gamification strategies for the software development process carried out by children. This article presents an exploratory case study where the ChildProgramming-G version was applied, taking some dynamics and game mechanics combined with the previous sensitization of the importance of collaborative work in children’s work teams.</p>

A Simplified Mbuid Process To Generate Web Form-Based Uis

<div>Authors</div> <div><div><ul style="list-style-type: none">Fardoun H.M.Tesoriero R.Sebastian G.Safa N.</div></div>	<div>Abstract</div> <div><p>Model-driven development technologies are employed to increase the productivity of software factories. The traditional model-based development of UI requires high-quality human resources with specific skills about concepts and technologies to build applications successfully.</p><p>The poorly inclusion of model-driven development technologies in computer science and engineering degree curricula in most universities leads to great stress on junior developers that have to adopt this technology in a very short period of time to become productive to the company.</p><p>This is one of the challenges small companies and start-ups face when adopting this technology.</p><p>This paper proposes a simplified transformation process that simple UML class models as input to produce Web form-based user interfaces. This process reduces the 2 meta-models and 2 transformation languages required to develop this type of user interfaces using traditional approaches to only one meta-model (UML) and one model-to-model-transformation language (ATL) to generate Web form-based user interfaces.</p><p>Even though this approach is not as powerful as traditional approaches are, it is good enough to introduce junior developers to get in touch with the technology.</p><p>Copyright</p><p>© 2018 by SCITEPRESS - Science and Technology Publications, Lda. Abstract

In this article, we are going to describe the solution proposed to help people with acquired brain damage, consisting of a service-oriented application, which provides a platform in which different tests are used that are used in the test battery of cognitive evaluations of occupational therapy of Loewenstein. This platform allows the patient to perform the tests on a touch screen, while the therapist can observe the results of the test in real time on a monitor. Copyright

Corporate Social Responsibility: Universities In The Kingdom Of Bahrain

Authors

- Tawash A.A.
- Al-Shirawi A.M.
- Sarea A.M.

Abstract

Corporate Social Responsibility (CSR) has become very vital for any corporation as many voices demand that entities must be accountable for business decisions and actions.

Since universities are vital entities in the society as they provide higher education to the human factor, they have a huge role that compels them to adhere to CSR and to make it a part of their strategic planning.

The study is about measuring the awareness of CSR in the management of universities in the Kingdom of Bahrain. The study used a descriptive survey method to analyze the relationship between Communication, CSR activities and Management's transparency with the level of awareness of CSR.

The respondents of the study are the top and middle level managers of universities where the primary tool in gathering data was a structured questionnaire. Secondary sources were utilized as well, such as: books, articles, unpublished thesis and other printed resources related to the study that were used to support and strengthen the findings of the study.

The main finding is, there is a significant relationship between CSR activities and communication with awareness of CSR.

Students’ Perceptions Of Knowledge Gained From Business Research Methods Course

Authors <ul style="list-style-type: none">Al-Hashimi M.Musleh Al-Sartawi A.M.A.Razzaque A.Reda Reyad S.M.Hamdan A.	Abstract <p>In recent years, universities have been emphasizing the embedding of research activities and courses within their undergraduate programs, leading to better student employability.</p> <p>Research methods courses are equally important for all students, even those graduates who are not planning to conduct research in the future, because they still require making informed decisions regarding research findings as part of their professional development.</p> <p>Consequently most degree programmes now contain a research methodology component. However, according to research pioneers, students’ perceptions of what research is, how it is carried out, and for what purpose, are the filters through which students are initially likely to perceive and, accordingly, engage both the context and the content of research.</p> <p>The main aim of the current study is to explore the perceptions of students towards research methods courses to facilitate the teaching/learning process and improve the interaction between instructors and students in ways that are meaningful to their own professional lives.</p> <p>This study contributes to the underline the best practice in teaching research methods relevant to the regional environment leading to higher student’s employability.</p> <p>Additionally, student perceptions are indicative of the cultural background of a country, thus, being able to reorient the cultural beliefs around educational research would enhance learning engagements within the contexts of the study.</p> <p>133 responds were received through SurveyMonkey.</p>

Measuring The Perception Of Knowledge Gained From Business Research Method Course

Authors

- Buallay A.
- Hamdan A.

Abstract

Business value today has been changed, the value is achieved when there are interactions between the resources (tangible and intangible) with the external environment. However, measuring and reporting intangibles are still an issue. The concept of intangibles is continually developed and passed into many stages. Last years the term intangibles have been replaced with intellectual capital. However, there are many challenges in understanding the concept of intellectual capital. Since intellectual capital is multidisciplinary field; each field of study has its own definition, measurement, theories and methodology. In this paper all these aspects are covered and illustrated.

Workload Cluster Balance Algorithm To Improve Wireless Sensor Network Performance

Authors

- Jedidi A.

Abstract

Wireless sensor Networks (WSNs) became in one of the important technologies in our days in which it is applied in many applications and domains.

The low cost technology of the WSNs is the first obstacle to improve performance in these applications. However, the usual methods of routing algorithm cannot be applied in WSNs.

Consequently, an adaptive routing algorithm is critical issue in the current deployment of WSN applications.

The main contribution of this paper is to develop a new routing protocol that address performance challenges in WSNs this will consequent extend the network lifetime of WSN.

Moreover, this proposed algorithm uses a new cluster system to define a route from source node to sink node in which the balance load cluster routing algorithm consists to balance the workload between the different nodes.

The workload balance has an objective to keep the lifetime for the nodes then for the whole network. As a result, the proposed algorithm improve the network lifetime by 22% compare to existing algorithms and the average of the energy consumption is decreased by 18%.

Abstract

Background: Medications are limited for patients with nonalcoholic fatty liver disease (NAFLD). It has been reported that aerobic exercise is effective in reducing the characteristics of NAFLD, although unclear data have ascertained the effects of high-intensity interval aerobic exercise on health-related quality of life (HRQoL) in diabetic obese patients with NAFLD.

Objectives: This a randomized controlled trial aimed to ascertain the effectiveness of 8-week high-intensity interval exercise on intrahepatic triglycerides (IHTG), visceral lipids and HRQoL in diabetic obese patients with NAFLD.

Study design: Between August and December 2017, 32 diabetic obese patients with NAFLD aged 45 to 60 years (21 men and 11 women) were enrolled in this study. They were randomly assigned to 2 groups, 16 patients in each group, high-intensity interval (HII) exercise and control groups. The HII group received a program of HII aerobic exercise for 8 weeks with medications of NAFLD and the control group received only medications without any type of exercise intervention. The test of IHTG, visceral lipids, and HRQoL were recorded at the initial assessment and at the end of the program after 8 weeks.

Results: There were significant differences between the 2 groups at the end of the study. These study findings exhibited significant improvements in IHTG, VO2peak visceral lipids, glycohemoglobin, plasma glucose, and all dimensions of HRQoL in the HII group (P <.05), But there was non-significant improvement in any measure in the control group (P >.05) after the 8-week intervention.

Conclusion: Eight-week high-intensity interval aerobic exercise has a beneficial effect on IHTG, visceral lipids, and HRQoL in diabetic obese patients with NAFLD. Effort and awareness should be dedicated to encouraging the active lifestyle among different population, especially diabetic obese patients with NAFLD.

Abbreviations: ALT = alanine-transaminase, BMI = body mass index, CLDQ = Chronic Liver Disease Questionnaire, HbA1c = glycohemoglobin, HDLs = high-density lipoproteins, HII = high-intensity interval, HOMA-IR = insulin resistance, HRQoL = health-related quality of life, IHTG = intrahepatic triglyceride, LDLs = low-density lipoproteins, MRI = magnetic resonance imaging, NAFLD = nonalcoholic fatty liver disease, TGs = triglycerides, VLDLs = very low-density lipoproteins, VO2peak = peak oxygen uptake. © 2019 the Author(s).

A Multi-Matching Approximation Algorithm For Symmetric Traveling Salesman Problem

Authors

- Naser H.
- Awad W.S.
- El-Alfy E.-S.M.

Abstract

This paper presents a deterministic algorithm for approximating the solution of the Symmetric Traveling Salesman Problem (STSP) using a multi perfect matching and partitioning technique.

Initially, we find the minimum cost collection of sub-tours that cover all cities, such that each sub-tour consists of at least four edges. The obtained solution is then partitioned into k branches, where k is the length of the smallest sub-tour in the resulting solution.

The algorithm solves the sub-problems in parallel and selects the sub-problem with the minimum resulting cost to be partitioned further. The algorithm converges when a complete cycle without sub-tours is found.

The performance of the proposed algorithm is evaluated and compared with the optimal values obtained by some well-known algorithms for solving STSP using 24 instances from the TSPLIB online library.

The results of the experiments carried out in this study show that our approach yields optimum or near-optimum solutions in polynomial execution time.

Detection And Monitoring Intra/Inter Crosstalk In Optical Network On Chip

Authors

- Jedidi A.

Abstract

Multiprocessor system-on-chip (MPSoC) has become an attractive solution for improving the performance of single chip in objective to satisfy the performance growing exponentially of the computer applications as multimedia applications.

However, the communication between the different processors' cores presents the first challenge front the high performance of MPSoC. Besides, Network on Chip (NoC) is among the most prominent solution for handling the on-chip communication.

Besides, NoC potential limited by physical limitation, power consumption, latency and bandwidth in the both case: increasing data exchange or scalability of Multicores.

Optical communication offers a wider bandwidth and lower power consumption, based on, a new technology named Optical Network-on-Chip (ONoC) has been introduced in MPSoC.

However, ONoC components induce the crosstalk noise in the network on both forms intra/inter crosstalk. This serious problem deteriorates the quality of signals and degrades network performance.

As a result, detection and monitoring the impairments becoming a challenge to keep the performance in the ONoC. In this article, we propose a new system to detect and monitor the crosstalk noise in ONoC.

Particularly, we present an analytic model of intra/inter crosstalk at the optical devices. Then, we evaluate these impairments in objective to present the motivation to detect and monitor crosstalk in Ono.

Can Oil Prices Help Predict Us Stock Market Returns? Evidence Using A Dynamic Model Averaging (DMA) Approach

<div>Authors</div> <div><ul style="list-style-type: none">Naser H.Alaali F.</div>	<div>Abstract</div> <div><p>Crude oil price behaviour has fluctuated wildly since 1973 which has a major impact on key macroeconomic variables.</p><p>Although the relationship between stock market returns and oil price changes has been scrutinized excessively in the literature, the possibility of predicting future stock market returns using oil prices has attracted less attention.</p><p>This paper investigates the ability of oil prices to predict S&P 500 price index returns with the use of other macroeconomic and financial variables. Including all the potential variables in a forecasting model may result in an over-fitted model.</p><p>So instead, dynamic model averaging (DMA) and dynamic model selection (DMS) are applied to utilize their ability of allowing the best forecasting model to change over time while parameters are also allowed to change.</p><p>The empirical evidence shows that applying the DMA/DMS approach leads to significant improvements in forecasting performance in comparison to other forecasting methodologies and the performance of these models are better when oil prices are included within predictors.</p><p>© 2017, Springer-Verlag GmbH Germany</p></div>

Crosstalk Noise Controller In WDM Optical Network On Chip Routers

<div>Authors</div> <div><ul style="list-style-type: none">Jedidi A.</div>	<div>Abstract</div> <div><p>The computer applications performance growing exponentially and they are greedier in computing resources. To satisfy these demands the multiprocessor system-on-chip (MPSoC) is a promising solution with the high resources offered.</p><p>Nevertheless, MPSoC performance fronts a limitation according the energy consumption, scalability, etc. one of serious problems of MPSoC is on chip communication, which the network on chip (NoC) is an attractive solution to skip it.</p><p>However, the traditional NoC is inadequate for the increasing number of cores and the data flow exchange. To avoid these limitations, find a technology that offer a high bandwidth with low power consumption and high scalability, the optical communication can be a perfect solution to satisfy these requirements. The silicon photonics technology proposes many optical devices on chip, which Optical Network-on-Chip (ONoC) has been introduced in MPSoC.</p><p>However, the factoring nature of the ONoC components induces a malicious impairment called crosstalk noise. This impairment has a direct effect on the quality of optical signals otherwise it drop the network performance.</p><p>Many types of optical switches are developed to ONoC, which they present the backbone of the optical network on chip. In addition, they are the first source of the crosstalk noise. As a result, controlling the crosstalk noise in ONoC becoming the first challenge to grow up this technolog.</p></div>

Multiple Models Of Binary-Support-Vector-Machine For Face Verification Using Histogram Orientation Gradient Features

<div>Authors</div> <div><div><div><div></div></div><div>Saeed M.G.H.</div></div><div><div><div></div></div><div>Aziz M.M.</div></div><div><div><div></div></div><div>Malallah F.L.</div></div><div><div><div></div></div><div>Sharef B.T.</div></div></div>	<div>Abstract</div> <div><p>In the past decade, face recognition is considered as an important biometric type due to its wide applications in practice in terms of authentication.</p><p>The verification process of a human face is not trivial task especially different face poses are captured to be matched. In this paper, an efficient algorithm for face recognition is proposed.</p><p>In the beginning, the step is starting by capturing the image of the face, then applying some preprocessing operations, after that feature extraction is applied, which is exploiting Histogram Orientation Gradient (HOG) to build the most representative feature vector for each digital image of the face. Next, the feature vector is passed into binary Support Vector Machine classifier (SVM) to construct a binary-SVM model for one individual in order to either accept or reject this individual.</p><p>In this research, multiple models of binary-SVM are utilized in this methodology, in which for each individual has its own SVM model, which is deemed as the contribution of this paper.</p><p>Set of experiments have been conducted to estimate the accuracy and performance of the proposed algorithm by using ORL database, which has 400 images face captured from 40 users each user has 10 different images as variant possess lighting, etc.</p><p>The result has given accuracy up to 99.23% as successful rate coming from both error types: False Accept Rate (FAR) is 0.25 % and False Reject Rate (FRR) is 0.52 %.</p><p>© 2005 - ongoing JATIT & LLS</p></div>

Abstract

Develop 1 serious games directed to rehabilitation requires different techniques, tools and guidelines for the identification and design of the different formal elements, This is why APRehab is built as a methodological proposal for design of serious games for rehabilitation that allows guiding developers in the interactive experiences creation for therapeutic processes. The reason for this article is to present the way in which the methodology validation mechanism was designed and what were the results obtained.

- Safa N.

Abstract

The great expansion of smartphones has enriched our ways of communication.

Not only people have direct voice and video communication capabilities, but also written communications are having more and more importance. Instant messaging applications like WhatsApp or Facebook Messenger play an important in the spreading of text-based communications.

Written communication used in those applications has been semantically augmented due to the inclusion of emoticons and emojis, which are pictographs expressing an emotion.

This article studies how older adult people use emojis in written communications on smartphones. The study reveals no significant difference between older adults and young people in the use of emojis, although older adults experience more difficulties to interpret them.

Scoping Review Of Systems To Train Psychomotor Skills In Hearing Impaired Children

<div>Authors</div> <div><div><ul style="list-style-type: none">Peñeñory V.M.Manresa-Yee C.Riquelme I.Collazos C.A.Fardoun H.M.</div></div>	<div>Abstract</div> <div><p>Objectives: The aim of this work is to provide a scoping review to compile and classify the systems helping train and enhance psychomotor skills in hearing impaired (HI) children.</p><p>Methods: Based on an exhaustive review on psychomotor deficits in HI children, the procedure used to carry out a scoping review was: select keywords and identify synonyms, select databases and prepare the queries using keywords, analyze the quality of the works found using the PEDro Scale, classify the works based on psychomotor competences, analyze the interactive systems (e.g., sensors), and the achieved results.</p><p>Results: Thirteen works were found. These works used a variety of sensors and input devices such as cameras, contact sensors, touch screens, mouse and keyboard, tangible objects, haptic and virtual reality (VR) devices.</p><p>Conclusions: From the research it was possible to contextualize the deficits and psychomotor problems of HI children that prevent their normal development. Additionally, from the analysis of different proposals of interactive systems addressed to this population, it was possible to establish the current state of the use of different technologies and how they contribute to psychomotor rehabilitation.</p><p>© 2018 by the authors. Public Awareness Of Adverse Drug Reaction Medical Safety

<div>Authors</div> <div><ul style="list-style-type: none">AlHusaini F.A.Al Mubarak M.M.S.</div>	<div>Abstract</div> <div><p>Purpose: The purpose of this paper is to contribute to the literature by assessing factors that typically engender adverse drug reactions (ADRs) jeopardizing medical safety. These factors are population knowledge, clarity in disclosure of the risks inhering ADRs and ADRs incidence. It seeks to minimize negative effect by early identification of drug reactions.</p><p>Design/methodology/approach: On the one hand, the study employs a model that shows relationships between various factors, and on the other hand, ADRs medical safety in the public healthcare sector.</p><p>Findings: Clarity of consultancy services in public healthcare significantly impact ADR medical safety. Population and healthcare provider education on ADRs medical safety are necessities. Implementation of an ADR reporting system in every healthcare institute is essential. This helps service providers to give a clear and accurate information to patients. It also makes patients more aware of consequences of ADRs.</p><p>Research limitations/implications: Time, place and sampling method are found to be the main study limitations. Researchers should take into their consideration the significant relationships between the factors and ADRs medical safety to improve level of awareness in the healthcare public sector.</p></div>

Audit Committee Characteristics: An Empirical Investigation Of The Contribution To Intellectual Capital Efficiency

<div>Authors</div> <div><div><ul style="list-style-type: none">Buallay A.</div></div>	<div>Abstract</div> <div><p>Purpose: In a knowledge economy, it is generally agreed that audit committees play a significant role in supporting the overall firm's knowledge, particularly enhancing the reporting process. In this respect, this paper aims to examine the effect of audit committee characteristics on intellectual capital efficiency.</p><p>Design/methodology/approach: This study examined 59 banks for five years (2011-2015), obtaining 295 observations. The study's independent variable is audit committee characteristics. The dependent variable is intellectual capital components (Human: human capital efficiency [HCE]; Structural: structural capital efficiency [SCE]; Relational: relational capital efficiency [RCE]; and Physical/ Financial: capital employed efficiency [CEE]). In addition, the study used four bank-specific control variables.</p><p>Findings: The findings deduced from the empirical results demonstrate that there is a significant positive impact of audit committee characteristics on intellectual capital. Moreover, the relationship between audit committee and intellectual capital components (HCE, SCE, RCE and CEE) also has a significant positive relationship if measured individually.</p><p>Originality/value: The study provides insights about the relationship between audit committee characteristics and the improvement in intellectual capital efficiency, which might be used by firms to re-arrange the roles within audit committee, to reassign internal priorities and to escalate position in their environment. © 2018, Emerald Publishing Limited.</p></div>

- Kamel D.M.

Abstract

Background: It has been documented that aerobic exercise may increase pulmonary functions and aerobic capacity, but limited data has evaluated a child’s satisfaction and pediatric quality of life (PQoL) with exercise training.

Objectives: This study aimed to investigate the effects of moderate-intensity exercise training on asthmatic school-aged children.

Subjects and methods: This study included 38 school-aged children with asthma (23 males and 15 females) aged between 8–12 years. They were randomly assigned to two groups, aerobic exercise (AE) and conventional treatment (Con tt) groups. The AE group received a program of moderate-intensity aerobic exercise for 10 weeks with asthma medications and the Con tt group received only asthma medications without exercise intervention. A home respiratory exercise was recommended for the two groups. Aerobic capacity was investigated using maximal oxygen uptake (VO2max), 6-minute walk test (6MWT), and fatigue index. PQoL was evaluated using Pediatric Quality of Life Questionnaire (PQoLQ).....

On A Single Server Queue With Server’s Choice For Exponential Or Deterministic Vacations

Authors

- Madan K.C.

Abstract

We study a single server queuing system M/G/1 with one by one Poisson arrivals and one by one-general service. After completion of each service, the server has a choice of taking a vacation with probability δ , or with probability $1-\delta$, the server may continue staying in the system.

We further assume that the server has the choice of taking a vacation of random length following an exponential distribution with mean service time $1/u$ ($u > 0$) with probability α_1 or a deterministic vacation with constant duration d with probability α_2 , $\alpha_1+\alpha_2=1$.

On completion of a vacation, the server instantly starts providing service if there is at least one customer in the system or else the server remains idle in the system till a new customer arrives for service.

We find steady state solution in terms of the generating function of the queue length as well as the steady state probabilities for various states of the system.

Critical Factors Affecting Leadership: A Higher Education Context

<div>Authors</div> <div><ul style="list-style-type: none">Hassan A.Gallear D.Sivarajah U.</div>	<div>Abstract</div> <div><p>Purpose: While the importance of leadership in various domains has been highlighted in the extant literature, effective leadership in the context of higher education sector has not been well addressed in the leadership scholarship. There is a need to address the challenge of leadership effectiveness in the education sector, including business schools, given the failures noticed in the sector attributed to poor-quality leadership. The purpose of this study was therefore to explore the factors that affected leadership in the context of higher education institutions.</p><p>Design/methodology/approach: The research is exploratory in nature as the study critically reviewed extant literature surrounding leadership practices specifically from a public-sector context to identify factors affecting leadership effectiveness.</p><p>Findings: The findings of the study pointed out that, regardless of the nation or organisation, leadership effectiveness is a factor that is dependent on how well the followers have accepted the leader. This indicates that, amongst the different challenges explored in this study, leadership effectiveness is not only a challenge by itself but is also affected by other challenges, including leadership practice and style.</p><p>Research limitations/implications: This research provides a better understanding of the critical factors affecting leadership practice of deans of business schools and how the styles' influence on leadership practice, the relationship between leadership practice and leadership effectiveness and how leadership style translates into leadership effectiveness. Originality/value.</p></div>

Board Interlocking And Firm Performance: The Role Of Foreign Ownership In Saudi Arabia

<div>Authors</div> <div><div><div></div></div><div><div>Hamdan A.</div></div></div>	<div>Abstract</div> <div><p>Purpose: The purpose of this paper is to investigate what effect, if any, foreign ownership has on the relationship between board interlocking and firm performance.</p><p>Design/methodology/approach: Data on 131 firms from various sectors listed in the Saudi Financial Market during the period of 2016 were collected. Board interlocking was measured using two indicators (number of interlocks and number of interlocks per member) and then it was divided into three levels (1-6/7-14/15 or more). As for the performance of firms, it was measured using two indicators: one operational (return on assets and the other financial (return on equity)). Foreign ownership was considered as a moderator variable. In addition to firm and board characteristics, a set of control variables related to ownership structure was used.</p><p>Findings: Results provide some support for the “busyness hypothesis” which postulates deterioration in the effectiveness of directors, in terms of their monitoring role, when increasing the number of interlocks per director. Results also manifest a positive effect exerted by foreign ownership in terms of turning around the otherwise negative relationship between board interlocking and firm performance in the second level of interlocking (7-14) Code Article 12’s limit on the number of interlocking per director to a maximum of five directorships. However, there is limited compliance to this code among Saudi firms. The study indicates the need to comply with the governance code in order to enhance governance which undercut performance.</p></div>

Exploring The Factors That Affect Employee Training Effectiveness: A Case Study In Bahrain

<div>Authors</div> <div><div><div></div></div><div><div>EL Hajjar S.T. Alkhanaizi M.S.</div></div></div>	<div>Abstract</div> <div><p>Training is a systematic way to improve the performance of employees, and it provides a link between job requirements and the current job specification of the employees.</p><p>In addition, training requires time, energy, and money. At this juncture, organization must look for the needs to evaluate training programs and assess its impact on both performance and behavior of trainees.</p><p>This study aimed to explore the factors affecting the training effectiveness of training programs, in the Kingdom of Bahrain. A survey questionnaire was used as a tool to gather data to answer the research questions in this study, the weighted mean was used to measure the central tendency on each dimension in the questionnaire.</p><p>Likewise, a correlation test was used to find out the relationship between the contents, training environment, facilities and materials, training schedule, presentation style from one side with the training effectiveness from other side.</p><p>Moreover, regression test examined the effect of the factors on training effectiveness. Survey questionnaires were distributed to trainees to collect the primary data for the research; the response rate was more than 65%.</p><p>The results of the survey suggested that the respondents had neutral perceptions on all factors. Likewise, it could be concluded that there was a strong positive linear correlation between the five factors and training effectiveness.</p></div>

Does Institutional Ownership Affect The Level Of Online Financial Disclosure

Authors <ul style="list-style-type: none">Al-Sartawi A.M.A.M.	Abstract <p>This research investigates the relationship between institutional ownership and the level of online financial disclosure in the GCC countries. The level of content dimension and the presentation dimension OFD were measured by adopting a checklist.</p> <p>The results reported that the total level of OFD was 77% and the level of institutional investor was 51% of the total ownership of the GCC companies. However, the findings revealed a negative relationship between the two variables.</p> <p>This paper is important as it seeks to contribute empirical evidence to the literature regarding the relationship between institutional ownership and the level of OFD in developing countries, particularly in the GCC countries.</p> <p>From a theoretical perspective, this study contributes in filling the gap in the current literature in the GCC region. From a practical perspective this research is significant for both the users and producers of financial information as it addresses the OFD and how it affects economic decisions in the GCC.</p> <p>© 2018 Allied Academies</p>

Robust And Trust Dynamic Mobile Gateway Selection In Heterogeneous VANET-UMTS Network

Authors <ul style="list-style-type: none">Sharef B.Alsaqour R.Alawi M.Abdelhaq M.Sundararajan E.	Abstract <p>Vehicular ad-hoc network (VANET) technology is serving variable applications as it uses moving vehicles as nodes in a network to create communication independent of a central infrastructure.</p> <p>Various types of VANET problems have emerged because of the absence of a central infrastructure as well as the random movement of the vehicles. VANETs cannot cope with network segmentation because of frequently disconnected networks in sparse environments.</p> <p>Therefore, several solutions have been proposed in the literature, such as integrating the VANET with other infrastructure networks by static gateways that have been fixed along the road.</p> <p>However, protocols based on static gateways can provide connectivity only in areas where they are deployed. Thus, the distribution and requirement of static gateways are the main drawbacks of these protocols.</p> <p>In this paper, a new routing protocol for robust and trust mobile gateway selection (RTMGwS) has been proposed. RTMGwS protocol uses the characteristics of vehicle movements and variant routing parameters to select an optimal mobile gateway with high robust and trust connection to an infrastructure network.</p> <p>The protocol is designed to spread the advertisement messages by the mobile.</p>

Intellectual Capital And Firm Performance: Differentiating Between Accounting-Based And Market-Based Performance

Authors <ul style="list-style-type: none">Hamdan A.	Abstract <p>Purpose: This study sheds light on the relation between intellectual capital and firm performance. The study argues that traditional performance measurement based on accounting is still able to explore the relation between intellectual capital and performance.</p> <p>Design/methodology/approach: The study was conducted at 198 firms from two Gulf Cooperation Council countries: Kingdom of Saudi Arabia and Kingdom of Bahrain for the period 2014–2016. To measure intellectual capital, the value added intellectual coefficient model was adopted along with two measures of performance: accounting-based performance which is return on assets and market-based performance which is Tobin’s Q, in addition to the Random-Effects Regression.</p> <p>Findings: Study findings came up with evidences that support the relationship between intellectual capital and accounting-based performance, but negates any relation between intellectual capital and market-based performance. The findings also revealed different results, between Saudi Arabia’s and those of Bahrain.</p> <p>Originality/value: The study contributes to the debate on the validity of relating intellectual capital to the traditional accounting-based performance. © 2018, Emerald Publishing Limited.</p>

Corporate Governance And Intellectual Capital: Evidence From Gulf Cooperation Council Countries

Authors <ul style="list-style-type: none">Al-Sartawi A.M.A.M.	Abstract <p>Corporate governance is considered as a management mechanism tool which enhances the ability of firms in disclosing relevant information for decision makers.</p> <p>Subsequently, good corporate governance enriches financial statements by reporting information regarding intellectual capital which indicates the ability of firms in managing their own assets and reflecting their value.</p> <p>Accordingly, the current research focuses on the relationship of corporate governance with intellectual capital disclosure in the GCC Countries.</p> <p>A regression model was developed to measure the relationship between the variables. The results showed that the total level of intellectual capital was 73% and the level of corporate governance applied by the GCC firms was 78%.</p> <p>Moreover, the findings indicate that there is a weak negative relationship between CGL and ICL. The current research extended the previous studies conducted in the GCC Countries by using a wider checklist, using a larger sample (274) and conducting a comparison study among the all GCC countries.</p> <p>As a result, this paper is important as it seeks to contribute empirical evidence to the literature regarding the intellectual capital and corporate governance in developing countries, particularly in the GCC Countries.</p> <p>© 2002-2018 Allied Business Academies</p>

Assessing The Impact Of Physicians’ Virtual Communities On Their Medical Decision Making Quality

Authors <ul style="list-style-type: none">Razzaque A.Eldabi T.	Abstract <p>Medical decision making is daunting to physicians of its unclear benefits for improving patient care while such decisions are evidence based and also are from the social capital of resources of the advises shared between their peers.</p> <p>Past scholars have reported great deal of medical errors and misdiagnoses caused by physicians: a situation that is degrading healthcare quality. It is not surprising why past research also stressed on the importance to empirically explore the effect of physicians' virtual community on their medical decision making quality.</p> <p>Virtual communities are a promising initiative in the healthcare sector. This paper describes how the participation of VC members is possible through the application of the Social Capital Theory's three dimensions in order to assess the effectiveness of physicians' virtual community so they can make better quality of medical decisions. Such is depicted in this paper's conceptual model.</p> <p>The model was empirically tested for its validity and reliability using an adapted survey for which data was collected from 204 SurveyMonkey virtual community physician members. The empirical evidence supports the hypothesis of the conceptual model through physicians' identification and shared vision, i.e. two pre-requisites for medical DM.</p> <p>© 2018 IEEE Computer Society. Abstract

The world today is witnessing a new phase of technological development, which in turn has reflected on the development of new media that have changed the criteria, controls and agenda imposed by the traditional media in terms of exchanging and disseminating of information.

It has benefited from the technological revolution and represented the finest human development in which all media are integrated and merged, and perhaps the Internet represents that combination in the clearest form.

This study seeks to identify the dependence of Arab communities in the Kingdom of Bahrain on the social networking sites as a source of information on various issues, and rely on it in shaping the knowledge and attitudes of the Arab communities towards such issues.

The Effect Of Cranio-Cervical Flexion Training And Rest Breaks On Neck Pain And Functional Performance In Visual Display Unit Users

Authors

- Battecha K.H.
- Abdel Raoof N.A.
- Kamel D.M.
- Tantawy S.A.

Abstract

Sustained sitting posture is attributed to the high prevalence of neck pain in office workers with computer-based tasks. Purpose: To investigate the effect of cranio-cervical flexion training (CCFT) and supplemental rest breaks on the ability of Visual Display Unit (VDU) users on the accuracy of work.

24 computer users randomly assigned into 2 groups (“A” control & “B” study). Both groups received a lecture on proper posture during work, assessment and modification of workstation set up but only group “B” received CCFT and supplementary rest breaks daily for of six weeks.

Pain intensity, functional neck disability, and work habitual posture were measured and compare between before and after intervention using Visual Analogue Scale, Neck Disability Index, and Digital Imaging for Postural Assessment method (DIPA), respectively.

Both groups showed intergroup difference in all the measured parameters, except for Gaze angle in group A showed non-significant difference. Between group comparisons showed significant difference in VAS and CCFT in favor of group B.

For neck angles there was significant difference in favor of group B except for neck flexion and Gaze angles and same was noted in Neck Disability Index...

Popular Interpretation Of History [Interpretación Popular De La Historia]

<div>Authors</div> <div><div><div></div></div><div>Mseer I.N.</div></div>	<div>Abstract</div> <div>History has always been a focal point of conflict as every individual follows different school of thought, which restricts to understand the true essence of history.</div> <div>According to the philosophers, history can be named as a reason behind many conflicts occurring in this era. Misreading of history handles the problems surrounding human society. All these problems are a benefit to the stakeholders; while, the fuel problems and executioners are incited and directed towards targets.</div> <div>The problem with the history is that it is not absolute, which means everyone evaluates every event differently, which leads to misunderstanding between people. These misunderstandings take the shape of disputes and then much bigger conflicts, such as racism and sectarianism. Past events triggered the people, which led them to the formation of the party.</div> <div>Thus, here as well, history dominated the human consciousness and their decision-making.</div> <div>© 2018, Universidad del Zulia. Enhancing Learning Outcomes Achievement In Higher Education Using Gaming Strategies: The Case Of Business Courses

Authors

- Amara A.B.H.
- Saberi M.

Abstract

Game-Based Learning (GBL) approach has become a prominent concept studied within student-centered learning environment. Trends in educational research have revealed an increasing interest of researchers and practitioners in gaming pedagogy as a prompt and effective student-centered learning strategy and an assuring mode of achieving learning objectives.

To date, numerous research studies have been conducted in various domains apropos the effectiveness of the intentional use of games in the educational context, as part of the curriculum content. Given this enormous amount of attention towards the utility of GBL, a growing number of practitioners have been inspired to shift from traditional classroom lectures to a game-based educational system.

Educational gaming systems aim to evolve the teaching and learning process, capture the learners’ attention, escalate their motivation and promote their skills. This paper examines the most recent literature regarding the game-based learning and explores the effectiveness of its implementation in business courses within higher education.

The purpose of this study is to investigate how and to what extend educational gaming pedagogy has contributed to student learning in higher education. An exploratory approach was used through instructor’s documents:

Attendance, Participation, and Achievement of ILOs procedure in a population of 57 undergraduate business students. The selected course for this study (Organizational Behavior and Leadership) was previously delivered in a traditional manner, but currently delivered using: Curriculum-Based-Educational Gaming and Learning-by-Making Games. Intended learning outcomes (ILOs) covered in this course include: transferable skills, critical and soft skills.

The range of game types and game design elements used in this course are discussed together with the range of impact indicators and the effectiveness measures, related to students' performance and achieving the learning outcomes. The results indicate that an educational-gaming pedagogy could be effective in facilitating the students' key skills development, such as creative thinking, communication, teamwork, problem-solving and conflict resolution.

Positive learning outcomes and enjoyable learning experience have been found associated with gaming strategies which are well-integrated to the curriculum content.

The Relationship Of Gold Price With The Stock Market: The Case Of Frankfurt Stock Exchange

Authors

- Al-Ameer M.
- Hammad W.
- Ismail A.
- Hamdan A.

Abstract

This paper considers the relationship between two main economic variables: Gold and Stock market in Germany that is represented by the HDAX Index under the Frankfurt Stock Exchange.

The researchers used monthly data collected from Bloomberg database spanning from August 2004 to September 2016 (12 years) in order to use them in the selected tests in this research which are: (Descriptive statistic tests, Pearson's correlation test, Unit root test to assure data are stationary for the Johansen's Co-integration test and the Granger Causality test.).

The data were divided into three periods: Pre, during and post to financial crisis in order to measure the different effect in each period. The results showed that there is a correlation between gold and stock market that differs in each period, as for the whole period of 12 years there was a moderate positive correlation, before the financial crisis there was a very strong positive correlation, during the financial crisis the correlation was positive but weak and low which means its insignificant, while at the period after the financial crisis the correlation changed in nature as it became a strong high negative correlation.

The co-integration test results were all the same for all the three different periods (before, during and after financial crisis) and also for the whole 12 years period that is there is a long run relationship between gold and stock market (represented by the HDAX Index).

Trans-Perineal Pumpkin Seed Oil Phonophoresis As An Adjunctive Treatment For Chronic Nonbacterial Prostatitis

<div>Authors</div> <div><div><ul style="list-style-type: none">Tantawy S.A.Elgohary H.M.I.Kamel D.M.</div></div>	<div>Abstract</div> <div><p>Background: A significant number of men who are younger than 50 years visit urologists for interminable prostatitis. This study aimed to thoroughly investigate the effect of pumpkin seed oil (PSO) phonophoresis on chronic nonbacterial prostatitis (CNBP).</p><p>Subjects and methods: Sixty patients with CNBP were randomly assigned to three groups: Group A, wherein patients were treated with PSO using phonophoresis; Group B, where patients underwent trans-perineal continuous low-intensity ultrasound (LIUS); and Group C, wherein patients underwent placebo LIUS. All three groups received their corresponding treatments daily for up to 3 weeks. The NIH-Chronic Prostatitis Symptom Index (NIH-CPSI), residual urine determined by urodynamic measurements, and flow rate were used to analyze study outcomes. The white blood cell (WBC) count in the prostatic secretion was determined.</p><p>Results: Comparisons of the intragroup mean values of all measurements in Groups A and B before and after the end of the treatment showed a significant improvement in residual urine, flow rate, WBC count, and NIH-CPSI (p < 0.05), whereas no significant change was found in Group C (p > 0.05). Between-group comparisons of all variables showed a significant difference was found after intervention (p < 0.05).</p></div>

The Moderation Role Of Board Interlocking On The Relationship Between Intellectual Capital And Firm Performance

Authors

- Hamdan A.M.
- Khamis R.
- Aldhaen E.
- Masfaka M.M.

Abstract

This study aims to investigate the relationship between board interlocking and intellectual capital as well as firm performance. This study was conducted at 131 firms from Saudi Arabia financial market for the period 2017.

To measure intellectual capital VAIC Model was adopted and Return on Assets ROA to measure the firm performance. Board interlocking was measured using number of interlocks and number of interlocks per board member.

The study findings supported by evidence illustrating the relationship between only one factor of intellectual capital and firm performance which is Human Capital Efficiency. Results also manifest the board interlocking does not affect the relationship between intellectual capital and firm performance.

Building Capacity For Knowledge Economies In The Arab World: The Role Of Human Capital

Authors

- Al-Roubaie A.

Abstract

Recent literature on development studies highlights the importance of human capital as a pillar for knowledge creation and innovation.

Human capital is a multidimensional concept comprising elements of education, health, income, and social well beings. Unlike other concepts of development which revolve around the traditional factor of production of land, human capital, as an economic input powering sustained economic growth, endows people with technical skills, knowledge and competencies serving to improve employability and increase earnings.

The aim of this paper is to discuss the impact of human capital on building capacity to create and sustain knowledge economies in Arab countries. Prospects for the future development of the region will improve commensurate with investment in people and knowledge creation.

The current regional development model, centered on the generation of income through resource extraction and channeling investment in large scale real estate projects, misses the mark in terms of generating capacity to sustainably countervail global competition and attain economic benefit from international terms of trade substituting stable high-value-added goods and services for volatile low-value-added equivalents.

Ant Colony Inspired Method For Reducing Load Imbalance In Multiprocessor Systems

Authors

- Ahmed K.
- El-Alfy E.-S.M.
- Awad W.S.

Abstract

Parallel processing is crucial for accelerating computation in many high-performance applications and modern technologies including computational modeling, optimization and simulation, Web and DNS servers, peer-to-peer systems, grid computing and cloud computing.

Due to the heterogeneity nature of various processing nodes and the differences of workloads of various tasks, some processors can be idle while others are overloaded.

In this paper, we present a simple, yet efficient, solution inspired by the intelligence of ant colonies to adequately mitigate the load imbalance and communication overhead problems in multiprocessor environments.

The proposed approach is based on defining and maintaining data structures to dynamically track the load of each processor.

We implemented the proposed algorithm and evaluated its performance under different scenarios against the baseline round-robin algorithm.

The results showed that the proposed algorithm has more effective properties than the round-robin algorithm.

Does Transcutaneous Electrical Nerve Stimulation Reduce Pain And Improve Quality Of Life In Patients With Idiopathic Chronic Orchialgia? A Randomized Controlled Trial

Authors

- Tantawy S.A.
- Kamel D.M.
- Abdelbasset W.K.

Abstract

Background: Chronic orchialgia is defined as testicular pain, which may be either unilateral or bilateral, lasting for more than 3 months. It disturbs a patient's daily activities and quality of life (QoL), inciting the patient to search for treatments to alleviate the pain. It is estimated that 25% of chronic orchialgia cases are idiopathic.

Purpose: The purpose of this study was to investigate how effective transcutaneous electrical nerve stimulation (TENS) is in pain reduction and how it consequently affects the QoL in patients with idiopathic chronic orchialgia (ICO).

Patients and methods: Seventy-one patients were randomly assigned to group A (study group), which included 36 patients who received TENS and analgesia, and group B (control group), which included 35 patients who received analgesia only. The outcome measures were the participants' demographic data and results of the visual analog scale (VAS) and QoL questionnaire. These outcomes were measured before and after 4 weeks of treatment and at 2-month follow-up.

Results: The results showed that compared to pretreatment, there was a significant reduction in pain postintervention and at 2-month follow-up in group A (P<0.0001 and <0.001, respectively; F=7.1) as well as a significant improvement in QoL at these time points (P<0.0001 and <0.0001, respectively). There were no significant differences in the VAS score and QoL

Linking Soft And Hard Total Quality Management Practices: Evidence From Jordan

Authors

- Saleh R.A.
- Sweis R.J.
- Saleh F.I.M.
- Sarea A.M.
- Eldin I.M.S.
- Obeid D.N.

Abstract

The purpose of this study is to describe the relationship between the two aspects of total quality management (TQM), soft TQM practices and hard TQM practices in manufacturing organisations.

A research project was carried out in Jordanian manufacturing organisations using questionnaire survey.

The relationships between the practices were examined through Pearson correlation and simple linear regression analyses. The results showed that the relationship between soft and hard TQM practices is significant.

Customer focus has a significant relationship with statistical process control (SPC), while education and training have two significant relationships (SPC and continuous improvement). Top management leadership has three significant relationships (SPC, continuous improvement and product design).

Finally, supplier relationship has significant relationships with all hard practices except process management practice. Hence, managers of manufacturing companies should realise the important role of hard practices in implementing soft TQM practices successfully. Copyright

Hybrid Hand-Directional Gestures For Baiometric Based On Area Feature Extraction And Expert System

Authors <ul style="list-style-type: none">Malallah F.L.Sharef B.T.Darwesh A.M.Yasen K.N.	Abstract <p>Nowadays, biometric authentication researches are becoming one of the major focuses among researchers due to various fraud attempts are taking place.</p> <p>Although, several authentication operations are available, these are not free of defects that affect negatively on the authentication operation. Therefore, a novel technique is proposed using index-finger of a hand in order to point out random directions such as up, down, left, or right.</p> <p>Accordingly, a new feature extraction based on area of the index-finger is proposed. It is hybrid between static and dynamic hand directional gesture recognition having advantage that is not forgettable as password due to biologically that this gesture is stored in the brain as visual memory type.</p> <p>This method starts by recording a video around 2-10 seconds as time duration, and then frames are processed one by one to output 4-set-direction, which are deemed as passwords for an individual. Later on, extracted gesture direction vector is matched against the stored one, to output either "accept" or "reject" status.</p> <p>Experiments were conducted on 60-video frames were prepared for training and testing recorded from 10 individuals. Result findings demonstrate high successful recognition rate as the performance accuracy is 98.4% of this proposed method.</p> <p>© 2005 - ongoing JATIT & LLS</p>

Effects Of A Proposed Physical Activity And Diet Control To Manage Constipation In Middle-Aged Obese Women

Authors <ul style="list-style-type: none">Tantawy S.A.Kamel D.M.Abdelbasset W.K.Elgohary H.M.	Abstract <p>Background: Obesity is very common worldwide and is related to critical morbidity and mortality. It has a large number of impacts on the human body. Constipation has a prevalence from 4% to 29% in various parts of the world and is considered to be a major health problem, with an estimated incidence of 5% in males and 15% in females. There is a strong association between obesity and constipation. This study aimed to investigate the effect of physical activity and a low-calorie diet on constipation in middle-aged obese women.</p> <p>Methods: This study included 125 obese women (age 20–40 years) who had chronic constipation. Participants were randomly assigned to two groups. Group A included 62 women who received a suggested protocol of physical activity, a low-calorie diet, and the routine standard care for constipation, whereas Group B included 63 women who received only the standard medical care for constipation and a low-calorie diet. Both groups followed the program for 12 weeks. Changes in the Patient Assessment of Constipation Symptoms (PAC-SYM) and Patient Assessment Quality of Life (PAC-QOL) scores, and in the body mass index (BMI) were recorded in study subjects, both at baseline and at the end of the study program.</p>

Using Mobile-Based Micro-Learning To Enhance Students; Retention Of It Concepts And Skills

Authors

- Kadhem H.

Abstract

The ability of students to retain information for future use is worthwhile in any subject. Specifically, it is essential in IT because concepts are built upon each other as a student progresses through a curriculum and courses.

In this paper, we propose a mobile-based micro learning approach to help students to retain more knowledge and skills, and support classroom learning.

The idea is to chunk the lecture content into multiple micro-content messages. Then, the scheduled messages are sent directly to students mobile devices at different times during a day. Using a well-defined case study, we investigate the influence of the proposed approach on IT students' outcomes.

The results show a noticeable improvement in students' retention of IT concepts and problem-solving skills.

Also, we propose the IT research challenges for developing a well solution for mobile micro-learning to support instructor in creating and preparing micro-content, and students to receive messages in appropriate time.

History Trust Routing Algorithm To Improve Efficiency And Security In Wireless Sensor Network

Authors

- Jedidi A.
- Mohammad A.

Abstract

Wireless sensor network (WSN) considered as one of the important technology in our days. Low-cost, low-power and multifunction based on these characteristics WSN become more and more apply in many areas.

However, one of the major challenges in WSN is the security. Indeed, the usual method of security cannot be applied in WSN because the technological limit of the different components.

In this context, we propose a new method to establish a secure route between the source node and the Sink node. Particularly, our method based on routing trust history table (RTH) and trust path routing algorithm (TPR).

Therefore, our method offers a high level of security for the routing path with efficiency and stability in the network.

Personality Traits And Knowledge Sharing Behavior Of Software Engineers

Authors <ul style="list-style-type: none">Rehman M.Safdar S.Mahmood A.K.Amin A.Salleh R.	Abstract <p>Unfortunately, the work so far has focused on the technical aspects of Software Engineering rather than non-technical aspects.</p> <p>This has led to the conclusion that Software Engineering is still an immature profession in terms of research.</p> <p>There is still room to do more research in this profession. Besides, this field has also become broad in nature and covers many aspects which are from other domains like personality and knowledge sharing behavior (behavioral outcome).</p> <p>Personality and knowledge sharing behavior are very important components for Software Engineering and that is why recently there is an increase in research papers on these aspects of Software Engineers.</p> <p>This paper also analyzed the personality traits of Software Engineers and the relationship between personality traits and knowledge sharing behavior.</p> <p>Big Five Personality Traits were used to analyze the personality of Software Engineers. Questionnaire method was used to collect response from Malaysian Software Engineers.</p> <p>Results indicated that Software Engineers scored high on extraversion and conscientiousness personality traits whereas they were moderate on openness to experience and agreeableness...</p>

SVM Classification Of Mri Brain Images For Computer-Assisted Diagnosis

Authors <ul style="list-style-type: none">Hamiane M.Saeed F.	Abstract <p>Magnetic Resonance Imaging is a powerful technique that helps in the diagnosis of various medical conditions. MRI Image pre-processing followed by detection of brain abnormalities, such as brain tumors, are considered in this work.</p> <p>These images are often corrupted by noise from various sources. The Discrete Wavelet Transforms (DWT) with details thresholding is used for efficient noise removal followed by edge detection and threshold segmentation of the denoised images.</p> <p>Segmented image features are then extracted using morphological operations. These features are finally used to train an improved Support Vector Machine classifier that uses a Gausssian radial basis function kernel.</p> <p>The performance of the classifier is evaluated and the results of the classification show that the proposed scheme accurately distinguishes normal brain images from the abnormal ones and benign lesions from malignant tumours.</p> <p>The accuracy of the classification is shown to be 100% which is superior to the results reported in the literature. The Contribution Of Interior Design Studio In Promoting Sustainable Design In Bahrain

<div>Authors</div> <div><div><div></div></div><div>Assali I.M.</div></div>	<div>Abstract</div> <div><p>Nowadays, Bahrain like many other cities faces different challenges such as a high percentage of pollution due to intensive use of energy, climate change and dense urban areas which influence human comfort and well-being. As a result, sustainability is an approach to alleviating these problems and improving the built environment and human health and wellbeing.</p><p>Consequently, the education system is an approach which affects societies in achieving sustainable development, especially in the fields of architecture and interior design.</p><p>Although interior design studios as a basis of the undergraduate interior design and architecture education have a unique learning environment for solving different environmental problems, unfortunately, sustainability is not considered in these studios.</p><p>Therefore, this research argues the significant role of an interior design studio in promoting students’ awareness and understanding of sustainable design. Few articles have been published addressing sustainability within design education.</p><p>Case studies of three interior design programs at three universities in Bahrain are presented, namely: Ahlia University (AU), Kingdom University (KU), and Applied Science University (ASU). The analysis of three program curricula revealed that there are no sustainable core courses...</p></div>

Neuromuscular Electrical Stimulation And Strength Recovery Of Postnatal Diastasis Recti Abdominis Muscles

<div>Authors</div> <div><div><div></div></div><div>Kamel D.M. Yousif A.M.</div></div>	<div>Abstract</div> <div><p>Objective To assess the effect of neuromuscular electrical stimulation (NMES) on the recovery of abdominal muscle strength in postnatal women with diastasis of recti abdominis muscles (DRAM).</p><p>Methods Sixty women, 2 months postnatal, participated in this study. They were divided randomly into two equal groups. Group A received NMES in addition to abdominal exercises; group B received only abdominal exercises. The intervention in both groups was for three times per week for 8 weeks.</p><p>The outcome measures were body mass index (BMI), waist/hip ratio, inter recti distance (IRD), and abdominal muscle strength in terms of peak torque, maximum repetition total work, and average power.</p><p>Results Both groups showed highly significant (p < 0.05) improvement in all outcomes. Further, intergroup comparisons showed significant improvement (p < 0.05) in all parameters in favor of group A, except for the BMI.Conclusion NMES helps reduce DRAM in postnatal women; if combined with abdominal exercises, it can augment the effects.</p><p>© 2017 by Korean Academy of Rehabilitation Medicine</p></div>

Experience Of Dysmenorrhea Among A Group Of Physical Therapy Students From Cairo University: An Exploratory Study

<div>Authors</div> <div><ul style="list-style-type: none">Kamel D.M.Tantawy S.A.Abdelsamea G.A.</div>	<div>Abstract</div> <div><p>Introduction: Dysmenorrhea is a condition describing the painful cramps that women feel before or during the menstrual period. While dysmenorrhea is the most common gynecologic complaint affecting adolescent and young women and there has been significant progress in understanding its pathophysiology and managing the symptoms, many young women do not seek medical consultation and remain untreated.</p><p>Aim of the study: The aim of the study was to explore the prevalence of dysmenorrhea, its physical impact, and associated coping behaviors among university students.</p><p>Methods: A total of 269 female college students volunteered to participate in the study. Data regarding the students’ experience with dysmenorrhea were collected via self-reported questionnaire developed based on relevant literature. Pain was scored on visual analog scale (VAS).</p><p>Results: Most respondents (84.01%) reported feeling pain in the abdomen and back (VAS score, 5.00). Mood swings (84.8%) and dizziness (48.2%) were, respectively, the most common affective and somatic symptoms related to menstruation. There was a significant difference in the amount of menstrual flow (p=0.004) and incidence of dysmenorrhea (p=0.03) according to menstrual regularity.</p></div>

Additive Benefits Of Environmental Enrichment And Voluntary Exercise On Cognition And Motor Coordination In Diabetic Mice

<div>Authors</div> <div><ul style="list-style-type: none">Rajab E.Al-Kafaji G.Al Enazi H.Al Qassab N.Sakusic A.Kamal A.</div>	<div>Abstract</div> <div><p>Objective: To evaluate the effects of voluntary daily exercise and environmental enrichment on spatial memory and learning as well as motor coordination and learning, in diabetic mice.</p><p>Setting: College of Medicine and Medical Sciences, Arabian Gulf University, Bahrain.</p><p>Design: An Experimental Animal Study.</p><p>Method: BALB/C mice (20 g to 25 g) received 55 mg/kg streptozotocin IP daily for five days. Diabetic mice were randomly assigned to one of the following groups for 12 weeks' duration:</p><p>(1) social isolation; (2) an environmental enrichment; (3) environmental enrichment and voluntary daily exercise.</p><p>The fourth group consisted of normal controls. At the end of 12 weeks, the mice were assessed by the Morris Water Maze and the Rotarod for cognitive and motor performance respectively.</p><p>Result: All diabetic mice showed hyperglycemia. In water maze testing, exercise and environmental enrichment groups showed better learning as evidenced by reductions in time (escape latency) and distance swum to reach a submerged platform compared to diabetic isolated mice. In diabetic mice, exercise itself did not have a significant additional benefit on learning and memory compared to environmental enrichment alone.</p></div>

Mechanism To Continue System Availability During Cyber Threat Scenario

<div>Authors</div> <div><ul style="list-style-type: none">Safdar S.Akbar R.Hassan M.F.Sharef B.T.Hajjar K.Qureshi M.A.</div>	<div>Abstract</div> <div><p>It is known that cyber attacks on the application systems causes denial of services to avoid confidentiality and integrity compromise. The system remains inaccessible until it is completely recovered from that threat. This unavailability of the system is very important to handle as it results in huge monetary loss for organizations and their customers suffer with bad quality services.</p><p>The main research objective is to design a framework for sustaining the system's availability at application level during the period of cyber attack. A designed framework is comprised of two compon en ts th at propose on e of the poten tial solution s for handling the system's unavailability problem while it is under attack.</p><p>Ad hoc data migration is the first component that transfers the information to the alternative system's data storage when the attack is detected. Secured authentication is another very important component that compliments the alternatively available system to provide the secured information services to the end user.</p><p>Secured authentication is designed differently with more strength compared to the conventional textual password authentication scheme so that the malicious users can be restricted from accessing the alternatively available system.</p><p>© 2017 ACM</p></div>

Board Characteristics And The Level Of Compliance With IAS 1 In Bahrain

Authors <ul style="list-style-type: none">Al-Sartawi A.M.A.M.Alrawahi F.Sanad Z.	Abstract <p>This paper aims to investigate the association between board characteristics and the level of compliance by Bahraini listed firms with International Accounting Standards (IAS 1).</p> <p>A disclosure index is used to measure the extent of compliance with IAS 1. A multiple linear regression model was used to assess the association of board characteristics with the extent of compliance with mandatory IAS 1 disclosure requirements.</p> <p>The findings indicate that there is a significant and negative relationship between CEO non-duality, board size, ownership of top stockholders, and the level of compliance with IAS 1 disclosure.</p> <p>The results of the analysis provided in this research should be particularly relevant to regulatory bodies and standard setters. This study might also help when formulating forward-looking disclosure strategies by managing the composition and characteristics of the board of directors.</p> <p>Additionally, the study contributes to financial reporting literature relating to the GCC countries, mainly Bahrain. The Moderating Role Of Corporate Governance On The Relationship Between Intellectual Capital Efficiency And Firm’s Performance: Evidence From Saudi Arabia

Authors <ul style="list-style-type: none">Hamdan A.M.Buallay A.M.Alareeni B.A.	Abstract <p>This study examined the moderating role of corporate governance on the interaction between intellectual capital efficiency and financial, operational and market performance.</p> <p>The study used a pooled data of 171 firms listed on the Saudi Stock Exchange during the period from 2012 to 2014. Multiple regression approach was incorporated under fixed-effect method.</p> <p>The findings revealed that the inclusion of corporate governance as a moderating variable has influenced positively the relationship between intellectual capital components and financial, operational and market performance.</p> <p>In addition, only capital employed efficiency positively affects financial performance, while structural capital efficiency and capital employed efficiency positively affect the operational performance.</p> <p>As for market performance, it was affected positively by all the Intellectual capital components. Further, the findings showed that the larger firms, the higher level of human capital efficiency, and smaller firms, the higher level of structural capital and capital employed efficiency.</p> <p>© 2017 Inderscience Enterprises Ltd</p>

Fundamental Determinants Of Real Effective Exchange Rate: Empirical Evidence From Bahrain

Authors <ul style="list-style-type: none">Gharaibeh A.M.O.	Abstract <p>This study investigates the long-run fundamental determinants of the real effective exchange rate (REER) of the Bahraini dinar (BHD). The annual time series data were mostly collected from economic indicators of Trading Economics 2016 and UNCTAD stat 2016.</p> <p>The study analyzes the impact of a range of macroeconomic variables including balance of payments as a proxy for supply and demand of Bahraini dinar, foreign direct investment outflows, inflation, interest rates, trade balance, trade openness, trade structure, money supply, gross domestic product, and trade similarity on the real effective exchange rate.</p> <p>Using E-views software and employing ordinary least square (OLS) regression, the empirical findings reveal that the main long-run determinants of the foreign exchange rate are supply and demand, foreign direct investment outflows, inflation, interest rate changes, trade openness, trade structure, money supply, GDP, and trade similarity.</p> <p>Trade balance, however, was found to be insignificant determinant of the exchange rates. The real effective exchange rate was found to be positively correlated with each of balance of payments, trade structure, money supply, gross domestic product, and trade similarity.</p> <p>However, it was found to be negatively correlated with each of foreign direct investment outflows, inflation, changes in interest rates, and trade openness. In addition, the impact of these explanatory variables comports, to a major extent, with the economic theory...</p>

The Role Of Knowledge Management In Enhancing The Organizational Productivity

Authors <ul style="list-style-type: none">Modara M.Al-Tahoo L.	Abstract <p>The paper aims to analyze whether knowledge management tools are being utilized and its perceived success in enhancing organizational performance and productivity in a petrochemical industry in the Kingdom of Bahrain.</p> <p>A mixed methodology method of quantitative and qualitative data gathering approaches was used. A questionnaire was distributed among fifty employees and four formal and informal semi-structured in depth interviews were conducted with the upper management.</p> <p>Analysis was done using SPSS for analysis of qualitative data and thematic categories for analysis of qualitative data. The study found that knowledge management tools were actually implemented in the organization for many years, but the employees were not aware that they were exercising it and that it was under the umbrella of a science called knowledge management.</p> <p>The success of knowledge management was perceived through better decision-making and better productivity by the concurrence of the two mixed methodologies used in the study.</p> <p>This is the first study that examines the impact of knowledge management tools on organizational performance and productivity in the oil and petrochemical industries, which are the main sources of income in Bahrain.</p> <p>It also provides an assessment tool that helps organizations to evaluate their knowledge management systems and suggest possible ways to enhance organizational productivity...</p>

Positive Emotion And Social Capital Affect Knowledge Sharing: Case Of The Public Sector Of The Kingdom Of Bahrain

<div>Authors</div> <div><div><ul style="list-style-type: none">Alshaikh I.Y.Razzaque A.Alalawi M.S.M.</div></div>	<div>Abstract</div> <div><p>Many scholars attempted to describe one or more of the following three: Positive emotion (PE), social capital (SC) and knowledge sharing (KS).</p><p>However, only a few researches have tried to discover a relationship that links the three domains. Numerous studies have asserted that PE in SC environments, particularly in virtual reality group’ formation would stimulate a KS behavior.</p><p>Whereas, another domain is tackled in this study; the holistic view of these three variables. Scholars have long believed that the existence of a KS culture facilitated by SC and PE. Thus, career progression.</p><p>This empirical research; conducted on a number of selected public sector organizations in the Kingdom of Bahrain has proved the existence of a positive relationship between the Three tested domains.</p><p>There was no clear evidence that this relationship existed in the virtual level community.</p><p>As a result linear regression analysis was applied to assess the relationship between the three domains of this study.</p><p>The findings led to a modified conceptual model viable for practical implications.</p><p>© Springer International Publishing AG 2017</p></div>

Pulsed Electromagnetic Field With Or Without Exercise Therapy In The Treatment Of Benign Prostatic Hyperplasia

<div>Authors</div> <div><div><div></div><div>Elgohary H.M.</div></div><div><div></div><div>Tantawy S.A.</div></div></div>	<div>Abstract</div> <div><p>Purpose: To investigate the effect of pulsed electromagnetic field with or without exercise therapy in the treatment of benign prostatic hyperplasia.</p><p>Subjects and Methods: Sixty male patients aged 55–65 years with benign prostatic hyperplasia were invited to participate in this study. Patients were randomly assigned to Group A (n=20; patients who received pulsed electromagnetic field in addition to pelvic floor and aerobic exercises), Group B (n=20; patients who received pulsed electromagnetic field), and Group C (n=20; patients who received placebo electromagnetic field). The assessments included post-void residual urine, urine flow rate, prostate specific antigen, white blood cells count, and International Prostate Symptom Score were weighed, before and after a 4-week intervention.</p><p>Results: There were significant differences in Group A and B in all parameters. Group C showed non-significant differences in all measured variables except for International Prostate Symptom Score. Among groups, all parameters showed highly significant differences in favor of Group A. There were non-significant differences between Group A and B and significant difference between Groups A and C and between Groups B and C.</p><p>Conclusion: The present study demonstrated that electromagnetic field had a significant impact on the treatment of benign prostatic hyperplasia. Accordingly, electromagnetic field can be utilized alone or in combination with other physiotherapy modalities...</p></div>

Real-Time Numerical 0-5 Counting Based On Hand-Finger Gestures Recognition

<div>Authors</div> <div><div><div></div><div>Sulyman A.A.</div></div><div><div></div><div>Sharef Z.T.</div></div><div><div></div><div>Faraj K.H.A.</div></div><div><div></div><div>Aljawaryy Z.A.</div></div><div><div></div><div>Malallah F.L.</div></div></div>	<div>Abstract</div> <div><p>A well Pointing out by hand for originating some gestures is highly useful in terms of human computer interactions especially when mute people desire to speak something, here a difficulty is raised by delivering their message to the outside world.</p><p>Therefore, these people can do easily some tasks by drawing a gesture in air using their hands in front of a computer camera which translates these gestures to a speech or text to be understood by other people.</p><p>Part of hand gesture recognition is counting by hand. This paper proposes a new technique describing hand gesture numerals which are from 0 to 5 that are pointed out by people to be understood by a computer.</p><p>The technique is implemented by reading a frame as an image then extracting only hand by using YCbCr colour space filter. Then, it is converting to black and white image.</p><p>After that, number is assigned to a gesture by counting number of flip as white to black from left to right on an intelligently selected path to be scanned on. The experiment was conducted using 180 random hand gesture frames taken from random people, the result of this recognition rate is recorded as 98%.</p><p>© 2005 - ongoing JATIT & LLS.</p></div>

Factors Influencing Firm Value As Measured By The Tobin’s Q: Empirical Evidence From The Saudi Stock Exchange (TADAWUL)

Authors <ul style="list-style-type: none">Gharaibeh A.M.O.Qader A.A.A.A.	Abstract <p>The main objective of the study is to empirically investigate the endogenous (firm-specific) determinants of firm value, as measured by Tobin's Q. For this purpose, 40 companies were selected from the six dominant sectors i.e., petrochemical, retail, agriculture and food, cement, industrial investment, and building and construction of the Saudi Stock Exchange (TADAWUL).</p> <p>The sample companies were selected on the basis of the availability of information correspondent to the study period (2005-2014). The panel data was mainly collected from Bloomberg, the publications of Tadawul, in addition to annual reports of the selected companies.</p> <p>The study uses descriptive statistics and correlation analysis to test for normality and multi-collinearity and to explore the type and intensity of the relationships among the hypothesized variables.</p> <p>In addition, the study uses multiple-regression analysis represented by Ordinary Least Square (OLS) to examine the relationships between firm value and each of the hypothesized nine explanatory variables.</p> <p>Specifically, the study analyzes the influence of leverage, size, market capitalization, growth opportunities, efficiency, assets tangibility, profitability, dividend policy...</p>

The Relationship Between The Development Of Musculoskeletal Disorders, Body Mass Index, And Academic Stress In Bahraini University Students

Authors <ul style="list-style-type: none">Tantawy S.A.Rahman A.A.Ameer M.A.	Abstract <p>Background: There are many mechanisms in which stress can lead to weight gain thus high a BMI. The endocrine and inflammatory pathway can directly increase abdominal adiposity. Another way in which stress leads to weight gain is through changes in health behaviors. The study aimed to investigate the prevalence of musculoskeletal disorders (MSDs) among healthy students of Ahlia University, and to determine the relationship between the development of MSDs and academic stressors and body mass index.</p> <p>Methods: Self-administered questionnaires were distributed to 94 students aged 18-26 years who were enrolled at various Ahlia University colleges and met other inclusion criteria. The students responded to the standardized Nordic musculoskeletal questionnaire and the modified College Student Stress Inventory regarding musculoskeletal symptoms and academic stressors. Height and weight measurements were also obtained to determine body mass index.</p> <p>Results: A total of 77.66% reported MSDs in one or more body part...</p>

Strategic Priorities For Exploiting Bahrain's Medical Tourism Potential

<div>Authors</div> <div><div><div></div><div>Ebrahim A.H.</div></div><div><div></div><div>Ganguli S.</div></div></div>	<div>Abstract</div> <div><p>Purpose: Medical tourism offers many opportunities to diversify Bahrain's economy and foster economic development and prosperity. This study aims to holistically investigate the potential of developing Bahrain as a medical tourism destination and create a strategic roadmap to help government decision makers and other key private sector players to realize that potential.</p><p>Design/methodology/approach: This study is primarily based on quantitative research methods. Data were collected from medical service providers in the Kingdom of Bahrain using a questionnaire and subsequently analyzed using quantitative analysis techniques.</p><p>Findings: Overall findings indicate that Bahrain has the potential to attain competitiveness in the medical tourism sector. This can be achieved through a combination of industry-specific management strategies which facilitate effective public-private partnerships, reinvent healthcare legislation and encourage investment in medical tourism infrastructure.</p><p>Practical implications: This study will help determine best practice, prioritize improvement opportunities and enhance performance relative to stakeholders' expectations and responsible tourism development.</p><p>Originality/value: Studies assessing medical tourism competitiveness of various countries are difficult to obtain. This study fills an existing gap by providing a distinct and comprehensive evaluation method of such competitiveness through a structured analysis of relevant market data in Bahrain.</p></div>

A Qualitative Analysis Of Singapore’s Medical Tourism Competitiveness

Authors <ul style="list-style-type: none">Ganguli S.Ebrahim A.H.	Abstract <p>Medical tourism, a rapidly growing market, has been recognized by many countries as a potential sector for economic diversification.</p> <p>Although Singapore stands out as one of the top destinations of medical tourism, investigation regarding its competitiveness has been limited and narrow in scope.</p> <p>This case study takes a qualitative approach to identify and analyze the factors that position Singapore as a competitive medical tourism destination.</p> <p>Based on a holistic approach, this study has shown that integrating diverse strategies for medical tourism development with sound government policies and proactive management practices have led to significant positive outcomes towards mutual success of tourism, healthcare and other economic sectors of Singapore.</p> <p>Additionally, the study provides strategic insights to drive lasting improvements in both public and private sectors of aspiring countries through efficient management and intelligent utilization of resources within and outside the medical tourism sector.</p> <p>© 2016 Elsevier Ltd</p>

Computational Intelligence In Cryptology

Authors

- Awad W.S.
- El-Alfy E.M.

Abstract

Computational intelligence (CI) has attracted the attention of many researchers for its effectiveness in solving different kinds of problems.

It has been applied to solve problems in a wide area of applications. The aim of this chapter is to present an overview of existing literature about the applications of CI in cryptology.

It demonstrates and studies the applicability of CI in cryptology. The problems examined in this chapter are the automated design of cipher systems, and the automated cryptanalysis of cipher systems.

It has been shown that CI methods, such as genetic algorithms, genetic programming, Tabu search, and memetic computing are effective tools to solve most of cryptology problems.

The Effect Of Kinesio Taping With Exercise Compared With Exercise Alone On Pain, Range Of Motion, And Disability Of The Shoulder In Postmastectomy Females: A Randomized Control Trial

<div>Authors</div> <div><div><ul style="list-style-type: none">Tantawy S.A.Kamel D.M.</div></div>	<div>Abstract</div> <div><p>[Purpose] The aim of the study was to investigate the effect of kinesio tape on pain, range of motion, and disability of the shoulder.</p><p>[Subjects and Methods] Seventy-four female patients who underwent modified radical mastectomy participated in this study. They were randomly divided into two groups, an experimental group that received kinesio tape for the shoulder joint in addition to a conventional physiotherapy program and a control group that received the physiotherapy program only. Outcome measures included the Visual Analogue Scale, shoulder range of motion, and Shoulder Pain and Disability Index.</p><p>[Results] The experimental group showed significant differences in all outcome measures both within and between groups. The control group only showed a significant within group difference in shoulder flexion.</p><p>[Conclusion] Clinicians should be able to recognize the benefits achieved through the use of adjunct treatment options such as kinesio tape in comparison with benefits that can be obtained through the use of individual modalities in physical therapy.</p></div>

Context Driven Data Mining To Classify Students Of Higher Educational Institutions

<div>Authors</div> <div><div><ul style="list-style-type: none">Sailesh S.B.Lu K.J.Aali M.A.</div></div>	<div>Abstract</div> <div><p>Literature shows that knowledge about contextual factors associated with student time to degree and CGPA could play an important role in enabling HEIs to make more accurate and informed decisions that enhance student learning.</p><p>It is also seen that such knowledge could be discovered using data mining process hidden in past data of students and used for prediction of student performance as part of the decision making process. In line with this argument in this study time to degree (total number of semesters taken to graduate) and CGPA of students were studied taking into account course difficulty and semester as contextual factors. CRISP-DM process was employed to mine student data.</p><p>Results showed that classification could be used as the model for understanding about student course taking pattern, CGPA, course difficulty and semester and optimize the student time to degree in terms of the course taking pattern, course difficulty and semester to achieve best CGPA.</p><p>The student data pertaining to a single programme of a single university were mined. Possible decisions in terms of student categorization based on course taking pattern, course categorization based on course difficulty, student advising and provision of learning support could be taken by using the outcomes of this research.</p><p>© 2016 IEEE</p></div>

Efficacy Of Lumbar Mobilization On Postpartum Low Back Pain In Egyptian Females: A Randomized Control Trial

<div>Authors</div> <div><ul style="list-style-type: none">Kamel D.M.Raoof N.A.A.Tantawy S.A.</div>	<div>Abstract</div> <div><p>BACKGROUND: Low back pain (LBP) is a common complaint in the postnatal period. Physiotherapy has many techniques to apply for such cases.</p><p>OBJECTIVE: To investigate the effect of central postero-anterior (PA) lumbar mobilization on muscle activity in postpartum LBP.</p><p>METHODS: Forty-five females with chronic LBP at least three months postnatal. Participants divided randomly and equally into three groups. Group A (Study group) received PA lumbar mobilization plus traditional treatment which consisted of Ultrasonic and Infra-red. Group B (Placebo group) received placebo mobilization plus traditional treatment. Group C (Control group) received traditional treatment only. All patients received 3 sessions/week for 4 weeks. Pain intensity, functional disabilities and Surface EMG for recording para spinal muscle activity were measured before and after intervention. Statistical analysis was done by ANOVA and paired t-test.</p><p>RESULTS: Central PA mobilization showed a significant reduction (P < 0.05) in the average surface EMG activity of the erector spinae musculature compared with the other groups as well as improvement in functional ability and reduction in pain intensity.</p></div>

The Impact Of Aaoifi Accounting Standards On Earnings Quality: The Case Of Islamic Banks In Bahrain

Authors <ul style="list-style-type: none">Sarea A.M.	Abstract <p>The purpose of this paper is to examine the change in earnings quality after the adoption of AAOIFI Accounting Standards in Islamic Banks of Bahrain.</p> <p>In this paper, we hypothesize that, adoption of AAOIFI accounting standards could lead to high level of earnings quality. However, data were collected from the annual reports of 5 Islamic banks in Bahrain during 2002-2011.</p> <p>The findings indicate that the change in earnings quality after the adoption of AAOIFI in Islamic Banks of Bahrain is higher due to the improvement of the quality of financial reporting.</p> <p>The Adoption of AAOIFI accounting standards is expected to lead to high level of earnings quality among Islamic Financial Institutions and play a significant role in attracting global investors' interest in the local markets, especially in a developing country like Bahrain.</p> <p>© 2016, Virtus Interpress. Irreversible Biometric Template Protection By Trigonometric Function

Authors <ul style="list-style-type: none">Malallah F.L.Aljawaryy Z.A.Sharef B.T.Khmag A.Razak L.F.A.	Abstract <p>A protection against biometrics fraud operations will never end because of the continuously occurring computer systems hacking attempts, in particular, the attempts to steal templates from databases related to biometrics.</p> <p>The objective of this paper is to propose a new technique for a biometric template protection, which is characterized as non-invertible (irreversible) template transformation for the reference biometric template inside the database.</p> <p>The proposed technique is based on cosine or sine trigonometric functions to exploit the periodicity property that leads to one-to-many solutions in mathematics, which is well explained in this paper, as well as tested with many attempts to revert the original template.</p> <p>Moreover, security analysis has been discussed in terms of several kinds of attacks such as multiplicity and brute force attacks.</p> <p>The analysis has given promising and fruitful results regarding the security and easiness in involving it inside the commercial work.</p> <p>© 2016 Praise Worthy Prize S.r.l. - All rights reserved</p>

Analyzing The Structure Of The Banking Industry In Jordan

<div>Authors</div> <div><div><div></div><div>Wadi R.M.A.</div></div><div><div></div><div>Saqfalhait N.I.</div></div></div>	<div>Abstract</div> <div><p>This paper aims to analyze the structure of the banking industry in Jordan during the period 2000-2013. Additionally, some important determinants for the banking industry in Jordan are examined.</p><p>According to the Jordanian banking industry structure, there was a noticeable decline in the market share of the three largest banks, which improved the level of competition between the operating banks in the Jordanian market.</p><p>However, the level of concentration in the banking sector in Jordan is still high. This paper shows that the concentration ratio by total assets have not experienced large or sudden changes during the study period, where Arab Bank acquires the largest market share, while the second and the third places were alternately occupied by the Housing Bank, the Islamic Bank and Ahli Bank.</p><p>Furthermore, the Rosse Panzar index reveals that the banking industry in Jordan can be considered as oligopoly market.</p></div>

The Impact Of Corporate Governance On Market Capitalization: Evidence From Bahrain Bourse

Authors <ul style="list-style-type: none">Al Mubarak M.M.S.Hamdan A.M.M.	Abstract <p>Our study is based on the “Agency Theory”, as it interprets the relationship between corporate governance and market capitalization of firms listed in Bahrain Bourse (BB). Longitudinal data is used in this study from 36 listed firms in Bahrain Bourse during the period of 2009-2013.</p> <p>A set of econometric methods, including the fixed effects method, is used to overcome different measurement problems of such relationship. The study findings include a set of results that are related to effect of ownership structure and board of directors’ characteristics on market capitalization of firms.</p> <p>Based on these findings, a set of recommendations, along with study limitations and future research, are put forward.</p> <p>© 2016, Virtus Interpress. Do Audit Committee Characteristics Of Bahraini Listed Companies Have An Effect On The Level Of Internet Financial Reporting?

Authors <ul style="list-style-type: none">AlMatrooshi S.A.S.Al-Sartawi A.M.A.M.Sanad Z.	Abstract <p>Corporate Governance and IFR are influential topics that need to be addressed nowadays due to its importance. Especially since companies are growing and extending globally.</p> <p>This research is conducted in Kingdom of Bahrain through the year 2014, where it investigates the relationship between Audit Committee characteristics as a tool of CG and IFR. Literature review has been conducted, not to mention Multi-regression test was used to evaluate the relationship between Audit Committee characteristics and IFR for Bahraini listed companies.</p> <p>The results have showed that the relationship between Audit Committee characteristics and IFR is negative, which indicates that the Audit committee characteristics have no influence over the disclosure of financial information over the internet.</p> <p>However, Frequency of meeting of the board and Big4 resulted in a positive relationship with internet financial reporting. The study ends with a main conclusion and recommendation that contain certain steps and advices of disclosing financial information in an appropriate way through the internet in order to improve the relationship between Audit committee characteristics and IFR.</p> <p>© 2016, Virtus Interpress. Development Of An Integrated Connectedness Model To Evaluate The Effectiveness Of Teaching And Learning

Authors <ul style="list-style-type: none">Al-Hamad S.Kollar L.E.Asim T.Mishra R.	Abstract <p>Use of blended learning system in a structured manner results in achieving higher order skills in cognitive domain. However, there is a need to quantify skills improvements as the students go through lower level skills to higher level skills.</p> <p>To ascertain this progression, it is necessary to develop a mathematical model of learning which can indicate the effectiveness of teaching and learning methods on skills improvement. In this study, mathematical learning model has been developed, which predicts the students' knowledge, depending on the amount of instruction they receive.</p> <p>It is expected that this model will enable development of direct correlation between teaching and learning methods, and the skills level attained by the students. The model is applied for different categories of learning.</p> <p>Parameters in the model are determined after least-square fitting has been applied on observed student learning data.</p> <p>© IFIP International Federation for Information Processing 2016</p>

An Investigation Of The Level Of Compliance With International Accounting Standards (IAS 1) By Listed Firms In Bahrain Bourse

Authors <ul style="list-style-type: none">Alrawahi F.E.Sarea A.M.	Abstract <p>Purpose: This study aims to investigate the association between seven firm-specific characteristics and the level of mandatory compliance with International Accounting Standards (IAS) 1 by firms listed on Bahrain Bourse.</p> <p>Design/methodology/approach: A disclosure index is used to measure the extent of compliance with IAS 1. Each of the 36 sampled firms' annual reports were examined against the index for the financial year ending December 31, 2013.</p> <p>Findings: The results reveal an overall compliance of 83 per cent. Regression results report that only audit firm size, profitability and industry type have a positive and significant association with IAS 1 disclosure requirements.</p> <p>Practical implications: This study should be particularly relevant to regulatory bodies in Bahrain for strategizing and encouraging compliance with IAS 1 by listed firms.</p> <p>Originality/value: Additionally, the study contributes to financial reporting literature relating to the Gulf Cooperation Council countries, mainly Bahrain. Bahrain is a financial hub, and it is interesting to examine how it presents its financial statements to investors and the degree of its compliance with International Financial Reporting Standards since its adoption in 2007. © 2016, © Emerald Group Publishing Limited.</p>

Corporate Governance And Innovation: Evidence From Bahrain Bourse

Authors

- Al-Mannaei H.M.H.
- Hamdan A.M.M.

Abstract

The study aims to assess corporate governance and innovation in selected listed companies at Bahrain Bourse.

The study sample included 39 companies in the year 2013. The study built one Linear Regression Model to study the relationship between corporate governance and innovation.

After testing the first hypothesis, there is an accepted level of corporate governance in selected listed companies at Bahrain Bourse.

And after testing the second hypothesis, there is no relationship between corporate governance and innovation in selected listed companies at Bahrain Bourse, whether the corporate governance is strong in selected listed companies at Bahrain Bourse or not, it has no relationship to Innovation.

In Kingdom of Bahrain the innovation is weak due to the fact that Bahrain imports innovation from other countries.

The study recommends that all companies listed in Bahrain Bourse to send their employees for special courses on corporate governance, which shows its benefits and to increase their awareness and advises to conduct a workshop of innovation in companies listed in Bahrain Bourse by professional institutes.

Organizational Effectiveness In Secondary Schools: An Empirical Study

Authors

- Maki T.H.A.
- Singh S.
- Eldabi T.
- Elali W.

Abstract

This paper outlines a research plan to measure the performance of secondary schools (SS).

Following a literature review, it is argued that the performance of SS measured with the help of a composite index of students' academic achievements, students' personal development, quality and effectiveness of teaching, learning and curriculum implementation, support and guidance for students, and the quality and effectiveness of leadership, management and governance, can be measured by taking account of internal and external factors impacting on performance.

Internal factors include growth plans, implicit and explicit powers held by Head of School (HoS), organization structure, leadership style, and HR policies. External factors include demand for organizations' services, competitive conditions, political, economic, social, legal and technical environment.

We present a conceptual model to be empirically tested along these lines with theoretical underpinnings from the leader-member exchange theory (LMX) and the principal-agent model (PAM). © 2016 Taylor & Francis Group, London.

Knowledge Sharing Culture In Higher Education: Critical Literature Review

Authors

- Ali Al Kurdi O.F.
- Ghoneim A.
- Al Roubaie A.

Abstract

This paper reviews and analyses the literature on knowledge sharing in a university setting with the aim of identifying and understanding the determinants of knowledge sharing culture, research trends, theories, and future research opportunities for knowledge sharing in higher education institutions (HEIs).

Findings suggest that there is disproportionately little knowledge sharing research in HEIs compared to the commercial sector. The review reveals that existing research on HEIs does not consider the determinants of knowledge sharing culture in a comprehensive manner.

Research on knowledge sharing in commercial and HEIs in developing economies like Africa, the Middle East and South America is found to be limited.

The review shows that future research should consider cultural and behavioural factors at different levels, that is, individual, national, professional teams, language issues and trust that might impact knowledge sharing practices among faculty members in HEIs in developing economies.

Usefulness Of The Cash Flow Statement For Bahraini Banks’ Lending Decisions

Authors

- Husain H.A.M.

Abstract

Accounting and commercial lending studies indicate the importance of the cash flow statement and its information and techniques to account users for better decision making.

Till the date of writing no attempts have been made to provide data on the actual use of cash flow information or techniques in lending decisions.

This study aims to investigate empirically the impact of understanding, using, and analysing the borrower’s cash flowstatement on the commercial lending decision and exploring the “cashflowability” information and techniques used by lenders to assess the creditworthiness of the borrowers in order to improve the lending analysis and smooth the lending decision.

Thus, we expect that when presented with empirical tasks conducted in the Kingdom of Bahrain and designed to measure the influence of cashflowability on lenders’ assessments of credit-worthiness, the lenders would use a cash flow statement and its information and techniques as a relevant signal.

Recommender Systems In Light Of Big Data

<div>Authors</div> <div><ul style="list-style-type: none">Almohsen K.A.Al-Jobori H.</div>	<div>Abstract</div> <div><p>The growth in the usage of the web, especially e-commerce website, has led to the development of recommender system (RS) which aims in personalizing the web content for each user and reducing the cognitive load of information on the user.</p><p>However, as the world enters Big Data era and lives through the contemporary data explosion, the main goal of a RS becomes to provide millions of high quality recommendations in few seconds for the increasing number of users and items.</p><p>One of the successful techniques of RSs is collaborative filtering (CF) which makes recommendations for users based on what other like-mind users had preferred. Despite its success, CF is facing some challenges posed by Big Data, such as: scalability, sparsity and cold start.</p><p>As a consequence, new approaches of CF that overcome the existing problems have been studied such as Singular value decomposition (SVD). This paper surveys the literature of RSs and reviews the current state of RSs with the main concerns surrounding them due to Big Data.</p><p>Furthermore, it investigates thoroughly SVD, one of the promising approaches expected to perform well in tackling Big Data challenges, and provides an implementation to it using some of the successful Big Data tools (i.e. Apache Hadoop and Spark).</p><p>This implementation is intended to validate the applicability of, existing contributions to the field of, SVD-based RSs as well as validated the effectiveness of Hadoop and spark in developing large-scale systems.</p></div>

Organizational Effectiveness In Secondary Schools: An Empirical Study

<div>Authors</div> <div><ul style="list-style-type: none">Maki T.H.A.Singh S.Eldabi T.Elali W.</div>	<div>Abstract</div> <div><p>This paper outlines a research plan to measure the performance of secondary schools (SS).</p><p>Following a literature review, it is argued that the performance of SS measured with the help of a composite index of students' academic achievements, students' personal development, quality and effectiveness of teaching, learning and curriculum implementation, support and guidance for students, and the quality and effectiveness of leadership, management and governance, can be measured by taking account of internal and external factors impacting on performance.</p><p>Internal factors include growth plans, implicit and explicit powers held by Head of School (HoS), organization structure, leadership style, and HR policies. External factors include demand for organizations' services, competitive conditions, political, economic, social, legal and technical environment.</p><p>We present a conceptual model to be empirically tested along these lines with theoretical underpinnings from the leader-member exchange theory (LMX) and the principal-agent model (PAM).</p><p>© 2016 Taylor & Francis Group, London</p></div>

Quotas And Empowerment: Enhancing Female Leadership In Corporate Boardrooms

<div>Authors</div> <div><div><div></div><div>Alhalawachi L.F.</div></div><div><div></div><div>Costandi S.</div></div></div>	<div>Abstract</div> <div><p>This paper focusses on understanding three important concepts namely, empowerment, female leadership, and quotas regarding female representation in the corporate boardroom within the private sector.</p><p>Through a review of the research, the aim is to draw a landscape of existing literature on the topic of quotas for women. This paper explores whether the representation of women in the corporate boardroom could be enhanced through applying the concept of mandatory quotas across different industries.</p><p>The study uses the current status of women within the boardroom in the private sector as its context and builds upon contemporary knowledge in the field. By linking the concept of quotas to female empowerment and leadership in the corporate boardroom, the paper hopes to fill a theoretical gap that has existed in the literature regarding whether mandatory quotas would be effective in eliminating discrimination against women in the boardroom or not.</p><p>© 2016 Taylor & Francis Group, London</p></div>

Crisis Management And Business Continuity In The Kuwaiti Oil Sector

<div>Authors</div> <div><div><div></div><div>Al-Tahous M.</div></div></div>	<div>Abstract</div> <div><p>The oil and gas sectors have performed tirelessly to prevent risks and execute business continuity and crisis management plans within global standards.</p><p>As the global population continues to rise, the worldwide appetite for energy develops; hence the oil and gas sectors must strive for unique and creative ways to tap into the natural resources of the earth.</p><p>Business continuity and crisis management are considered to be two of the most reliable strategies that help oil and gas companies survive disasters. This paper discusses the need for crisis and business continuity management during emergencies, contingencies and disastrous conditions with respect to the oil and gas sector of Kuwait.</p><p>In order to attain the research objectives, a qualitative approach will be adapted to collect primary data from the managers of ten reputed oil companies in Kuwait through interviews.</p><p>© 2016 Taylor & Francis Group, London</p></div>

Review Of Energy Management Policies In Healthcare Buildings

<div>Authors</div> <div><div><div></div><div>Shehab S.</div></div></div>	<div>Abstract</div> <div><p>Global energy issues relating to industry, transportation and building are reviewed in this paper. Consumption by buildings, both residential and commercial, is considered. Hospitals and healthcare facilities as major energy intensive and energy demanding buildings are selected to be the research area.</p><p>The purpose of this paper is to define a gap and generate a problem statement related to the research subject by conducting a systematic literature review of existing energy management policies in hospitals and healthcare facilities which are seen to use the terms 'energy efficiency' and 'energy conservation' interchangeably.</p><p>It is also found that these policies are technology driven with disregard to energy conservation (human preferences, behaviour and motivational changes). The paper highlights the need to develop new policy that can be used as a strategic decision-making and risk-assessment tool in handling energy issues to achieve sustainable economic and environmental goals.</p><p>© 2016 Taylor & Francis Group, London</p></div>

Impact Of Quality Assurance On Accountability In Policy Networks

<div>Authors</div> <div><ul style="list-style-type: none">Oraibi M.A.Costandi S.Eldabi T.</div>	<div>Abstract</div> <div><p>This paper explores the research question of how publicly reported quality assurance (QA) review results of public service providers can impact the accountability in policy-making networks that have been created with the scope of reforming such public service provision.</p><p>It does that by combining different theoretical concepts of two different perspectives in public administration: new public management and networked governance. The research uses empirical data collected from semi-structured qualitative interviews to construct a working conceptual model.</p><p>Results of thematic analysis suggest that publicly reported QA is expected to have a positive impact on accountability through six various mechanisms: creating an accountability environment, getting access to information on performance, promoting self-accountability, having more control, balancing of power, and managing expectations.</p><p>The emergent developing focal theory will then be used to collect more data to validate the constructed key and sub-propositions.</p><p>© 2016 Taylor & Francis Group, London.</p></div>

Usefulness Of The Cash Flow Statement For Bahraini Banks' Lending Decisions

<div>Authors</div> <div><ul style="list-style-type: none">Husain H.A.M.</div>	<div>Abstract</div> <div><p>Accounting and commercial lending studies indicate the importance of the cash flow statement and its information and techniques to account users for better decision making.</p><p>Till the date of writing no attempts have been made to provide data on the actual use of cash flow information or techniques in lending decisions.</p><p>This study aims to investigate empirically the impact of understanding, using, and analysing the borrower's cash flow statement on the commercial lending decision and exploring the "cashflowability" information and techniques used by lenders to assess the creditworthiness of the borrowers in order to improve the lending analysis and smooth the lending decision.</p><p>Thus, we expect that when presented with empirical tasks conducted in the Kingdom of Bahrain and designed to measure the influence of cashflowability on lenders' assessments of credit-worthiness, the lenders would use a cash flow statement and its information and techniques as a relevant signal.</p><p>© 2016 Taylor & Francis Group, London</p></div>

Abstract

The recent explosion in complex global networking architectures has spurred a concomitant rise in the need for robust information security.

Further, as computing power increases exponentially with every passing year, so do the number of proposed cryptographic schemata for improving and ensuring the encryption integrity of cutting-edge infosec protocols.

Improving Information Security Practices through Computational Intelligence presents an overview of the latest and greatest research in the field, touching on such topics as cryptology, stream ciphers, and intrusion detection, and providing new insights to an audience of students, teachers, and entry-level researchers working in computational intelligence, information security, and security engineering.

Computational Intelligence Paradigms: An Overview

Authors

- El-Alfy E.-S.M.
- Awad W.S.

Abstract

The evolution of communication networks and information systems, to support wireless access, cloud and grid computing, and big data, provides great business opportunities.

However, it also generates a new trend of sophisticated network threats and offers several challenges in securing information and systems confidentiality, integrity and availability.

The traditional techniques used by security experts are mostly static and lack the much needed characteristics of adaptation and self-organization, computational efficiency and error resilience to deal with evolving attacks.

The inherent characteristics of computational intelligence (CI) paradigms provide a promising alternative that has gained popularity resulting in significant applications in information security.

There is a plethora of CI paradigms commonly used in this domain including artificial neural networks, evolutionary computing, fuzzy systems, and swarm intelligence. This chapter provides an overview of the widely-recognized CI paradigms and shades the light on some of their potential applications in information security.

- Al-Dallal A.

Abstract

This paper proposes a new solution for Traveling Salesman Problem (TSP) using genetic algorithm. A combinational crossover technique is employed in the search for optimal or near-optimal TSP solutions.

It is based upon chromosomes that utilise the concept of heritable building blocks. Moreover, generation of a single offspring, rather than two, per pair of parents, allows the system to generate high performance chromosomes.

This solution is compared with the well performing Ordered Crossover (OX). Experimental results demonstrate that, due to the well structured crossover technique, has enhanced performance.

The Relationship Between Ownership Structure Dimensions And Corporate Performance: Evidence From Bahrain

Authors

- Khamis R.
- Hamdan A.M.
- Elali W.

Abstract

In this study we examine the relation between ownership structure and corporate performance; the sample of the study included 42 out of 48 companies of all sectors in Bahrain Bourse in five years from 2007-2011.

Several dimensions of ownership concentration were studied in addition to managerial and institutional ownership. Two different measurements of performance were used (ROA and Tobin's Q).

The study investigated this relation using several control variables and 2SLS statistical method to overcome the problem of endogeneity that may exist between the study variables.

It was found that ownership concentration have a negative effect with statistical significance on company performance. Institutional ownership was found to have a positive effect on company performance.

Managerial ownership was not found to have a significant effect on company performance, however it was found that managerial ownership has a positive effect on performance only in the case of declining ownership concentration.

Other results were revealed by the study regarding company age, size, growth, board size and liquidity.

The study is considered to have theoretical and practical implications. It contributes to the debate about agency theory and managerial entrenchment.

Automatic Detection Of Abnormalities In Ecg Signals : A Matlab Study

Authors

- Hamiane M.
- Al-Heddi I.Y.

Abstract

The Electrocardiogram (ECG) is a diagnostic tool that measures and records the electrical activity of the heart. Interpretation of the ECG signal allows diagnosis of a wide range of heart conditions.

These conditions can vary from minor to life threatening. In this paper real ECG records provided by the MIT-BIH Arrhythmia Database are used to build an efficient mechanism for detecting abnormalities in the ECG records.

Prior to the detection, selected filters are used to eliminate any interference while maintaining the useful information within the signal. Detection of Heartbeat-related abnormalities of other heart diseases such as AV blockage and Ventricular Fibrillation is implemented.

Results of ECG signal preprocessing and abnormality detection demonstrate the suitability of the selected filtering techniques and the efficiency of the detection mechanisms.

A Single Server Bulk Input Queue With Random Failures And Two Phase Repairs With Delay

Authors

- Madan K.C.
- Malalla E.

Abstract

We study a batch arrival single server queueing system, where the server (service channel) provides one by one general service to customers.

It is assumed that the service channel goes through random failures from time to time.

As the result of a breakdown, the service of a customer in service is suspended, the service channel waits for the repairs to start and this waiting time termed as 'delay time' is assumed to be general.

Further, the repair process involves two phases of repairs with different general repair time distributions.

We derive the queue size distribution as well as mean number of customers in the system at a random epoch under the steady state conditions.

In addition, we discuss some particular cases and derive some known results known earlier.

Cross-Cultural Translation, Adaptation, And Psychometric Testing Of The Roland-Morris Disability Questionnaire Into Modern Standard Arabic

Authors

- Maki D.
- Rajab E.
- Watson P.J.
- Critchley D.J.

Abstract

STUDY DESIGN. Cross-cultural translation, adaptation, and psychometric testing. **OBJECTIVE.** To cross-culturally translate and adapt the Roland-Morris Disability Questionnaire (RMDQ) into Modern Standard Arabic and examine its validity with Arabic-speaking patients with low back pain (LBP).

SUMMARY OF BACKGROUND DATA. The English RMDQ is valid, reliable, and commonly used to assess LBP disability in clinical practice and research. There is no valid and reliable version of the RMDQ in Modern Standard Arabic.

METHODS. The RMDQ was forward translated and back translated. An expert committee of musculoskeletal physiotherapists reviewed the translation. Eight patients with LBP evaluated item-by-item comprehensibility. Ten patients piloted the RMDQ for overall comprehensibility and acceptability. Seventeen bilingual patients tested the agreement of the Arabic and English RMDQs. Two-hundred one patients completed the RMDQ and the visual analogue scale. Sixty-four patients were followed-up for test-retest reliability.

RESULTS. Translation of most items was uncontroversial. The expert committee found the Arabic RMDQ clinically and culturally appropriate. They reviewed item 11, addressing bending and kneeling, because this has a clinical significance and cultural/religious implication regarding prayer positions. All patients reported that it was easy to understand and complete. The Arabic RMDQ had high overall agreement with the English RMDQ for the global score (intraclass correlation coefficient [ICC] = 0.925; 0.811-0.972). Kappa statistics showed good item-by-item agreement (none ≤0.30). Mean (SD) RMDQ and visual analog scale scores of 201 patients were 10.53 (4.80) and 5.11 (2.28), respectively. The RMDQ had a low correlation against pain intensity (r = 0.259; P < 0.01). A Cronbach α of 0.729 showed high internal consistency. Test-retest reliability of the Arabic RMDQ was good (ICC = 0.900; 95% confidence interval, 0.753-0.951). Kappa statistics were high for 18 items and fair for 6.

CONCLUSION. The Arabic version of the RMDQ has good comprehensibility and acceptability, high internal consistency and reliability, low correlation against pain intensity, and good agreement with the English RMDQ. We recommend its use with Arabic-speaking patients with LBP. Level of Evidence: 3.

A CMOS-Based Analog Function Generator: Hspice Modeling And Simulation

Authors

- Hamiane M.

Abstract

In many Engineering applications, analog circuits present many advantages over their digital counterparts and have recently been particularly used in a wide range of signal processor circuits. In this paper, an analog non-linear function synthesizer is presented based on a polynomial expansion model.

The proposed function synthesizer model is based on a 10th order polynomial approximation of any of the required non-linear functions. The polynomial approximations of these functions can then be implemented using basic CMOS circuit blocks.

The proposed circuit model can simultaneously synthesize and generate many different mathematical functions. The circuit model is designed and simulated with HSPICE and its performance is demonstrated through the simulation of a number of non-linear functions. Copyright

Improving The Security Of Storage Systems: Bahrain Case Study

Authors

- Awad W.S.
- Abdullah H.M.

Abstract

Developing security systems to protect the storage systems are needed. The main objective of this paper is to study the security of file storage server of an organization.

Different kinds of security threats and a number of security techniques used to protect information will be examined.

Thus, in this paper, an assessment plan for evaluating cyber security of local storage systems in organizations is proposed. The assessment model is based on the idea of cyber security domains and risk matrix.

The proposed assessment model has been implemented on two prestigious and important organizations in the Kingdom of Bahrain. Storage systems of the assessed organizations found to have cyber security risks of different scales.

This conclusion gives certainty to the fact that organizations are not capable of following the cyber security evolution and secure their storage systems from cyber security vulnerabilities and breaches.

Organizations with local storage systems can improve the cyber security of their storage systems by applying certain techniques. Copyright

On A Single Server Queue With Arrivals In Batches Of Variable Size, General Service In Three Fluctuating Modes, Balking, Random Breakdowns And A Stand-By Server During Breakdown Periods

Authors

- Madan K.C.

Abstract

We study a single server queuing system with arrivals in batches of variable size and general service in three fluctuating modes with different mean service rates.

It is assumed that just after completion of the previous service or just after completion of repairs or just after arrival of a fresh batch of customers at a time when the system is in an idle state, the service to next customer may start in mode j with probability p_j where $j = 1,2,3 \sum_{j=1}^3 p_j = 1$.

The system is assumed to be subject to random failures with the general repair time distribution. The system is equipped with a stand-by server which operates only during the breakdown periods of the system.

We further assume that an arriving batch may balk and leave the system as soon as it arrives or may join the system. The balking rates have been assumed to be different during the working periods or the breakdown periods of the main server. Steady state results for the queue size distribution at a random epoch have been obtained explicitly.

Probabilities of the idle state as well as the utilization factor of the system have been found explicitly. Many particular cases of interest are discussed.

Abstract

Introduction: Acute or prolonged dietary restriction has been shown to have significant effects on learning and memory, and also on the food seeking behaviour in animals.

Aim: This study investigated whether or not there are sex differences in spatial learning and memory following short-term dietary restriction in the rat.

Methods: Two month-old male (n= 24) and female (n= 24) Sprague-Dawley rats were randomly assigned to either (1) male or female control (i.e. normal diet regimen); (2) male or female 40% dietary restriction for either 2. hours (2. h-DR) or 2 weeks (2 wks-DR) duration.

Following the restriction paradigm (i.e. either 2. h or 2 weeks), animals were weighed, and learning and memory was assessed daily for a total of 5 days by Morris Water Maze.

Results: Dietary restriction for 2. h provoked high speed swimming in female rats compared to controls. However the females performance in water maze was inferior to the control animals. Two weeks after 40% DR resulted in reduction of male's body weight by 20% compared to their control group.

However, both males and females showed difficulties in water maze learning and memory test after the 2 weeks 40% DR. The animals swam longer distance and took longer time to reach the platform when compared to their age-matched controls.

Physician Virtual Community And Medical Decision Making: Mediating Role Of Knowledge Sharing

Authors <ul style="list-style-type: none">Zahir Irani P.Razzaque A.Eldabi T.Jalal-Karim A.	Abstract <p>— Healthcare (HC) utilizes informatics to provide its services through information technology (IT) where social network is a promising initiative to aid medical decision-making (DM) quality. Even though HC is a globally expensive investment and a complex service-oriented industry, it still suffers from quality due to frequently occurring medical errors. In order to reduce medical errors, medical DM needs to be improved.</p> <p>This research has participated in this effort by exploring social capital theory (SCT) within a virtual community of practice (VCoP), HC knowledge management (KM) process – knowledge sharing quality and medical DM quality.</p> <p>– Traditional and up-to-date HC-related and non-HC-related theoretical, empirical and case study-based literature review has been thoroughly analyzed to hence support the inter-relationships between the theoretical constructs being: SCT, knowledge sharing quality and medical DM quality presented as a conceptual framework. This conceptual framework is based on propositions derived from thorough literature review theory to relate between each of the constructs.</p> <p>– SCT has the potential to facilitate medical DM within a VCoP, as well as, knowledge sharing quality plays a mediating and facilitating role between SCT and medical DM quality.</p> <p>– The study has significantly focussed on SCT, which is actually part of the social sciences and anthropology discipline. In parallel, this research also analyzed the literature that pertained to the value of a VCoP to improve medical DM quality.</p> <p>– The study’s focus on SCT, knowledge sharing and medical DM; hence promotes future empirical research findings to be compared within a particular HC VC; from a case study point of view.</p> <p>– The paper adds value to the large body of intellectual knowledge by enhancing the conception of medical DM quality to improve HC quality. Medical DM is a soft area of research. This research has introduced a new avenue on which HC quality can be improved by reducing medical errors, from the perspective of social computing and medical DM quality and the mediating role of knowledge sharing quality.</p> <p>© 2013, Emerald Group Publishing Limited. Effect Of Abdominal Versus Pelvic Floor Muscle Exercises In Obese Egyptian Women With Mild Stress Urinary Incontinence: A Randomised Controlled Trial

Authors <ul style="list-style-type: none">Kamel D.M.Thabet A.A.Tantawy S.A.Radwan M.M.	Abstract <p>The aim of this study was to compare the benefits of a 12-week abdominal and pelvic floor muscle strength training programme for the treatment of mild stress urinary incontinence (SUI) in obese women.</p> <p>Thirty obese female patients with mild SUI were randomly divided into two groups: the abdominal exercise (ABD) group and the pelvic floor exercise (PF) group. The participants were evaluated for vaginal pressure, leak point pressure (LPP) and waist-hip ratio (WHR) before, immediately after and at a 12-week follow-up after the termination of treatment.</p> <p>The ABD group showed a significant increase in vaginal pressure immediately after the intervention and at follow-up (. p < 0.001), while the PF group showed no significant change in this variable. The ABD group also showed a significant increase in LPP after 12 weeks of treatment (. p = 0.008), while the PF group demonstrated no significant change in the same variable (. p = 0.030). At 24 weeks, the LPP remained significantly different from the baseline only for the ABD group (. p = 0.005).</p> <p>The results showed that the 12-week abdominal muscle strength training programme is superior to pelvic floor strength training for the treatment of mild SUI in obese patients.</p> <p>© 2012</p>

Privatization And Globalization: An Empirical Analysis

Authors

- Boubakri N.
- Cosset J.-C.
- Debab N.
- Valéry P.

Abstract

This paper examines the link between globalization-measured by foreign direct investment (FDI) and foreign portfolio investment (FPI) - and privatization of state-owned enterprises, in a multi-country sample that focuses on developing countries.

We hypothesize that privatization has an effect on FDI/. FPI as the process of fostering private sector participation is often accompanied by liberalization reforms, and by allocations of substantial shares of newly privatized firms to foreign investors.

Similarly, we expect FDI/. FPI to foster privatization efforts as new capital inflows, technology and managerial skills that accompany FDI/. FPI make the environment more prone to competition, providing governments with incentives to privatize inefficient firms that need to be turned around.

This relation is assessed in two ways, first in a dynamic panel using a generalized method of moments approach, and second through panel causality tests. We find a bi-directional positive relation between privatization proceeds and globalization, particularly in the case of FDI.

The Need Of Accounting Standards For Islamic Financial Institutions: Evidence From AAOIFI

Authors

- Mohammed Sarea A.
- Mohd Hanefah M.

Abstract

Purpose: The purpose of this paper is to determine the need of Islamic Accounting Standards – a review of the literature – for Islamic financial institutions (IFIs).

Design/methodology/approach: The basis of the paper was stakeholder theory to analyse the need of accounting standards and to design the conceptual framework as evidenced from Accounting and Auditing Organization for Islamic Financial Institutions (AAOIFI). The evidence reviewed suggests the need for Islamic accounting standards to fill the gap in accounting practice among Islamic financial institutions.

Findings: The AAOIFI accounting standards serve as a guideline that may reflect the unique characteristics of IFIs and become a useful tool to meet the various needs of IFIs. Currently, one of the major challenges facing IFIs lies in the preparation of the financial statements under different accounting standards and which may lead to problems of comparability, reliability and compliance level measurement.

This has resulted in a heated debate among scholars which has hitherto translated to the evolving existing literature surrounding the interpretation of the level of compliance with the Islamic accounting standards.

The paper concludes with various recommendations for future research, the most important of which is the need for future studies on how AAOIFI accounting standards can be made mandatory in all Muslim countries.

Influence Of Second-Degree Flatfoot On Spinal And Pelvic Mechanics In Young Females

Authors

- Abdel-Raoof N.
- Kamel D.M.
- Tantawy S.

Abstract

Objective: To investigate the effect of bilateral flexible second-degree flatfoot on pelvic and spinal mechanics in young females.

Methods: A case-control trial was conducted at the Faculty of Physical Therapy, Cairo University, Egypt, on 60 female participants who were assigned into two groups. Group A (the control group) included 31 healthy subjects, and group B (the study group) included 29 subjects with bilateral flexible seconddegree of flatfoot deformity. For each subject in both groups, using lateral weight-bearing radiographs, foot assessments were performed bilaterally to measure the talus-first metatarsal angle. Using the formetric-II device, 3D assessments of the pelvis were performed on the frontal and sagittal planes in addition to lumbar and thoracic curvatures on the sagittal plane. Outcome measures were pelvic inclination, pelvic tilt, and lumbar lordotic and thoracic kyphotic angles.

Results: There was a significant difference in pelvic inclination and in lumbar and thoracic angles (P=0.012, 0.009, and 0.028, respectively) between both groups. There was no significant difference between both groups in pelvic tilt (P=0.688).

Conclusion: Subjects with bilateral flexible second-degree flatfoot demonstrated increased pelvic inclination, lumbar lordotic and thoracic kyphotic angles than normal subjects. Foot assessments should be performed as an essential part of the evaluation of female patients with spine and pelvic problems

Henna (Lawsonia Inermis L.) Dye-Sensitized Nanocrystalline Titania Solar Cell

Authors

- Jasim K.E.
- Al-Dallal S.
- Hassan A.M.

Abstract

Low-cost solar cells have been the subject of intensive research activities for over half century ago. More recently, dye-sensitized solar cells (DSSCs) emerged as a new class of low-cost solar cells that can be easily prepared.

Natural-dye-sensitized solar cells (NDSSCs) are shown to be excellent examples of mimicking photosynthesis.

The NDSSC acts as a green energy generator in which dyes molecules adsorbed to nanocrystalline layer of wide bandgap semiconductor material harvest photons.

In this paper we investigate the structural, optical, electrical, and photovoltaic characterization of two types of natural dyes, namely, the Bahraini Henna and the Yemeni Henna, extracted using the Soxhlet extractor.

Solar cells from both materials were prepared and characterized. It was found that the levels of open-circuit voltage and short-circuit current are concentration dependent. Further suggestions to improve the efficiency of NDSSC are discussed.

Genotype-Phenotype With BNF Mapping: An Automatic Approach Of Producing A Computer Program

Authors

- Abdulwahhab R.S.

Abstract

BNGA is a computer programs production that employs the engine of GA as a base for building its programs.

BNGAs' genotypes (solutions) have a list of integers that are used to develop the phenotypes (programs).

These phenotypes are developed by using the grammatical syntax of the programming language. In this paper, BNGA is investigated and designed to study the symbolic regression and classification problems.

Detailed analysis of these problems are examined and the results were clearly in favor of BNGA. All results were compared experimentally with other suggested techniques.

Through these experiments, BNGA proved as a competitive approach that can be applied in practice to solve the problems of both computer science and engineering.

An Integrated Framework To Classify Healthcare Virtual Communities

Authors

- Razzaque A.
- Eldabi T.
- Jalal-Karim A.

Abstract

Healthcare (HC) strives to improve service quality through its cost-effective social computing strategy.

However, sudden rise in the count of virtual community of practices (VCoPs) introduced many choices for physicians; As a result, it is not surprising to observe current literature reporting lack of study to investigate ideas integration within and between VCoPs.

VCoPs need to be categorized for HC physicians so they will be able to pin-point effective a VC to attain assistance from.

This paper is one of the first investigative studies, in HC sector, that proposed a framework to classify and pin-point appropriate VCoPs, for physicians, after it reviewed and analyzed traditional and up-to date theoretical, empirical and case study literature in the area of social computing, knowledge management (KM) and VCoPs.

The implementation of this framework pinpointed professional VCoPs as most appropriate for physicians based on strict requirements, i.e. closed physician communities holding many participants, which are older than 5 years with high boundary crossing. This framework is also a "one-size-fit-all" formula to build an organizational VCoP, utilizable by other business sectors.

On An M[X]/G/1 Queuing System With Random Breakdowns, Server Vacations, Delay Times And A Standby Server

Authors

- Khalaf R.F.
- Madan K.C.
- Lucas C.A.

Abstract

In this work, we study a batch arrival queue with a Bernoulli schedule vacation where after every service completion the server may take a vacation of random length with probability p or may stay in the system providing service with probability 1 - p.

Moreover, we assume that the server may breakdown randomly, and the repair process does not start immediately after a breakdown; consequently, there is a delay time waiting for repairs to start.

The main new contribution in this work is that we assume that the system is equipped with a standby server to serve the costumers during the vacation period of the main server.

The service times, vacation times, repair times and delay times are assumed to follow different general arbitrary distributions while the service times of the standby server follows an exponential distribution.

Fuzzy Cognitive Map Theory For The Political Domain

Authors

- Al Shayji S.
- El Zant El Kadhi N.
- Wang Z.

Abstract

An acceleration of regional and international events contributes to the increasing challenges in political decision making, especially the decision to strengthen bilateral economic relationships between friendly nations. Obviously this becomes one of the critical decisions.

Typically, such decisions are influenced by certain factors and variables that are based on heterogeneous and vague information.

A serious problem that the decision maker faces is the difficulty in building efficient political decision support systems (DSS) with heterogeneous factors.

The basic concept is a linguistic variable whose values are words rather than numbers and therefore closer to human intuition.

Fuzzy logic is based on natural language and is tolerant of imprecise data. Furthermore, fuzzy cognitive mapping (FCM) is particularly applicable in the soft knowledge domains such as political science.

In this paper, a FCM scheme is proposed to demonstrate the causal inter-relationship between certain factors in order to provide insight into better understanding about the interdependencies of these factors. It presents fuzzy causal algebra for governing causal propagation on FCMs.

Fuzzy-Based Ontology Intelligent DSS To Strengthen Government Bilateral Economic Relations

Authors <ul style="list-style-type: none">Alshaiji S.El Kadhi N.Wang Z.Al-Anzi F.S.	Abstract <p>This paper focuses on developing prototype architecture for intelligent decision support systems that can help top political decision makers in Kuwait. The system is intended to be used to strengthen bilateral economic relationship between Kuwait and friendly nations.</p> <p>The scope of the study is conducted within two sectors that are closely linked to the top political decision maker and fall under different domains, political and investment domains. These two sectors are Kuwait Investment Authority (KIA) and Ministry of Foreign Affairs (MFA). Both of these sector equally impact the political decision making process.</p> <p>The aim in this research is to support systems that help top political decision maker in the decision making process to strengthen bilateral economic relationship between nations. Typically, such decisions are influenced by certain factors and variables that are based on scattered, unstructured, heterogeneous and vague information. The location of such information can be in the political and investment domains. The data sets involved in the decision making are unusually non-numeric and sometimes even immeasurable.</p> <p>A natural language is thus needed to describe such information which requires human knowledge for interpretation. A serious problem that the decision-maker faces is the difficulty in building efficient political decision support systems (DSS) with heterogeneous, scattered and distributed data. Applying ontology based method is one of the possible solutions that address: for the integration of information, lack of clarity of content and knowledge of relations between different concepts. This method can be used to generate high level knowledge and Information Integration. In this research, we propose to use ontology to integrate the scattered informational resources from the political and investment domains by extracting key concepts and relations between sets of information.</p> <p>Furthermore, we will integrate fuzzy logic with ontology to obtain a solution that is more suitable for solving the uncertainty and reasoning problems to make intelligent decision support solutions that can help top political decision makers for the purpose of strengthening bilateral economic relationship between nations. Fuzzy ontology membership value that reflects the strength of an inter-concept relation will be consistently used to represent pair of concepts across ontology. Each concept considers a concept consistency by assigning a fixed numeric value. Concept consistency is computed as a function of strength of all the relations associated to the concept.</p> <p>© 2011 ACM</p>

On A Batch Arrival Queuing System Equipped With A Stand-By Server During Vacation Periods Or The Repairs Times Of The Main Server

Authors

- Khalaf R.F.
- Madan K.C.
- Lukas C.A.

Abstract

We study a queuing system which is equipped with a stand-by server in addition to the main server.

The stand-by server provides service to customers only during the period of absence of the main server when either the main server is on a vacation or it is in the state of repairs due to a sudden failure from time to time.

The service times, vacation times, and repair times are assumed to follow general arbitrary distributions while the stand-by service times follow exponential distribution.

Supplementary variables technique has been used to obtain steady state results in explicit and closed form in terms of the probability generating functions for the number of customers in the queue, the average number of customers, and the average waiting time in the queue while the MathCad software has been used to illustrate the numerical results in this work.

Achieving High Recall And Precision With HtIm Documents: An Innovation Approach In Information Retrieval

Authors

- Al-Dallal A.
- Abdulwahab R.S.

Abstract

Information retrieval techniques become a challenge to researchers due to huge growth of digital and electronic information. Researchers are attending this area by developing different techniques to enhance precision and recall of retrieved documents.

This paper presents an information retrieval system that has promising results in terms of recall and precision. These results are achieved via developing an improved inverted index for the document set and by developing an enhanced evaluation function to evaluate the retrieved documents in response to user query.

Results are compared with two well known techniques applied in IR domain which are Okapi-BM25 and Bayesian interface network model and show that precision and recall of the retrieved documents by the proposed method outperforms these two techniques.

Building Fuzzy-Logic Ontology For Political Decision-Makers T

Authors <ul style="list-style-type: none">Al shayji S.El Kadhi N.E.Z.	Abstract <p>Many applications have been developed in various government departments, aimed at providing and enhancing delivery of services to citizens, businesses, and organizations. However, little work has been done in building a knowledge base on ontologies that facilitate communication between stakeholders and that identify the processes and describe the data of these applications.</p> <p>This paper focuses on developing prototype architecture for intelligent decision support systems that can help top political decision-makers. The system is intended to be used to strengthen bilateral economic relationships between nations.</p> <p>Typically, decisions are influenced by certain factors and variables that are based on heterogeneous and vague information. A commons language is thus needed to describe such information, which requires human knowledge for interpretation. In this research, we propose to use an ontology to integrate vague information from the political and investment domains.</p> <p>The process will begin with the extraction of key concepts and relationships between sets of information, and proceed to integrate fuzzy logic with ontology. The ontology includes information about important concepts in each domain.</p> <p>We will present a case study that contains clear concepts for the political and investment domains, the Object Paradigm ontology (OP) for each concept will be presented in order to capture a high level of knowledge to facilitate the work of decision-makers in the decisionmaking process of the political field.</p> <p>To build our ontology, we will use the Protégé-OWL editor. In this paper we will present the Ontology for the domain of bilateral economic relationships and demonstrate how using this Ontology we can obtain more suitable solution to solve the uncertainty and reasoning problems in this intelligent decision support system. The intended users are the top political decision-makers.</p>

A New Relational KMR Based Algorithm For Microsatellite Identification

Authors

- El Zant El Kadhi N.

Abstract

Microsatellites are short DNA sequences of chromosomes formed by the repetition of a pattern itself consists of one to four bases. Microsatellites are good markers for genetic mapping.

With different levels of variability, Microsatellites are useful for different types of studies. Microsatellites with little variation are useful for analysis of related species, while those with few alternatives are useful in identifying populations within a single species.

In this paper we will present a new algorithm allowing the research of similar subsequences in biological sequences. Different regions of DNA contain sequences that mutate at different rates. Some regions have a high mutation rate, while others have low rates of change.

The main goal of this paper is to present a new algorithm and a new way to find repetition in biological sequences.

The Influence Of Knowledge Management On EHR To Improve The Quality Of Healthcare Services

Authors <ul style="list-style-type: none">Razzaque A.Jalal-Karim A.	Abstract <p>Background & Purpose: The healthcare (HC) sector, globally, invests huge amounts of funds in an attempt to attain international quality standards but the structure and content barriers make the electronic patient records (EPRs) and electronic health record (EHRs) fall short. This study seeks to illuminate theories and practices of HC knowledge management (KM) so this process can facilitate the narrowing of EPR and EHR gap, that ultimately will cascade to improving the HC quality which is therefore assessable by the quality management system (QMS) model.</p> <p>Design/methodology/approach: This research is theoretical in nature. It examines relevant theories and reviews literature on (1) HC quality assessment and tools, (2) HC KM, (3) EPRs and EHRs, (4) knowledge representation and (5) the Symantec web. This study passed through phases of research. In the first phase, EPR and EHR were researched to analyze why they fall short in facilitating the HC's initiative to improve quality. Next, HC KM was studied to analyze and establish a viable link between (1) EPR and EHR and (2) KM. Technologies and techniques like the Symantec web and Knowledge Representation were also analyzed to make the facilitation of HC KM possible.</p> <p>Findings: The findings indicate that, by this paper contributing a conceptual, integrative, and strategically viable HC KM facilitator model for EPRs and EHRs, this paper answers its research question that HC KM can facilitate EPR and EHR to improve HC quality. Research limitations/implications.</p> <p>Originality & Value: This research provides an integrated and a conceptual model grounded in theory. This model needs to be tested in a real or simulated HC environments. This paper is one of the first studies to solve the barriers of EPR and EHR using KM.</p>

The Impact Of Information Technology On Improving Banking Performance Matrix: Jordanian Banks As Case Study

Authors <ul style="list-style-type: none">Jalal-Karim A.Hamdan A.M.	Abstract <p>This paper examines the affects of information technology (IT) on the Jordanian banking industry for the period of 2003-2007. The research examine the level of using IT by 15 Jordanian Banks for a period of five years, then explore the impression on improving the performance of two forms of matrix.</p> <p>The first is matrix of financial performance which comprises Market Value-Added (MVA), Return on Investment (ROI) and Earning per Share (EPR) and the second is matrix of operational performance, which includes the Net Profit Margin (NPM), Operating Return on Assets (ORA) and Profitability of Employee (PE).</p> <p>Utilizing IT by Jordanian banks will be measured by testing the level of investment in Hardware, Software, Internet Banking, Phone banking, number of ATMs, use of Cyber branches and Banking via SMS.</p> <p>The results of our measurements indicated that there is an impact on the use of MIS in Jordanian banks in the market value added (MVA), Earnings Per Share (EPS), Return on Assets (ROA), Net Profit Margin (NMP).</p>

Intelligent Field Converged Ip Network For Semi-Real Time Hydrocarbon Process Automation Applications (HPAA) Case Study

Authors

- Almadi S.
- Askandrani F.
- El-Haddadeh R.
- Al-Harbi S.
- Jahromi M.

Abstract

Process Control Systems (PCS) are embarking on a new wave of opportunities driven by Information Technology (IT) developments in infrastructure and system integration.

Currently, most hydrocarbon process control systems consist of multiple, separate networks with limited interconnectivity. Due to the rapid developments in IT, desktop computer system, Internet and Ethernet technologies are becoming increasingly suitable for use in the manufacturing and process control sectors.

This paper addresses the ring network topology in supporting real-time applications in a converged IP network environments utilizing standard Ethernet IEEE 802.3 protocol packet format.

The ring self-healing capabilities will be examined. Empirical data, for an implemented hydrocarbon process automation system, will be used to illustrate the interdependency of the following: application performance, traffic mix, network configuration, and potential areas of improvements.

The outcomes of this effort demonstrate that a converged IP network for a semi-real-time process control system is feasible, given special consideration (i.e., embedded network recovery optimization time, bandwidth allocation, traffic mix, traffic classification, Quality of Service, network availability, etc.).

Critical Requirements For Converged Internet Protocol Network For Hydrocarbon Process Automation Applications

Authors

- Almadi S.
- El-Haddadeh R.
- Jahromi M.

Abstract

Hydrocarbon Process Automation Applications (HPAA) are supported by process automation infrastructure elements, such as instruments, actuators and controllers that are linked by a real-time network.

Conventional practice is to dedicate real-time network for each HPAA and not allow other applications from utilizing the same infrastructure to ensure robustness, determinacy and compatibility.

This paper addresses the feasibility of supporting non-HPAA traffic with real-time HPAA applications on the same infrastructure in a Local Area Network (LAN). Network simulation will be used to highlight network and application design criteria, traffic mix, and areas of improvements.

The outcomes of this effort demonstrates the ability of supporting both non-HPAA with HPPA traffic, given special considerations (i.e., bandwidth, applications, priority, etc.) in a converged Internet Protocol (IP) network with priority based Quality of Service (QoS) setting.

Converged IP Network For Hydrocarbon Process Automation

Authors

- Almadi S.
- El-Haddadeh R.
- Jahromi M.

Abstract

Hydrocarbon Process Automation Applications (HPAA) are used in industrial plants that operate under conditions that - if not controlled - could become dangerous for people, assets and the environment.

Process control systems that support the necessary functions to achieve and maintain a safe steady state HPAA operation are referred to Safety-Related (SR) systems.

These systems are composed of sensors, actuators, and logic solvers linked together by communication networking channels. Reliable networking plays a key role in supporting such a system infrastructure.

The existing network designs consist of multiple, separate networks with limited interconnectivity. Literature review was conducted to identify gaps and requirements in establishing converged Internet Protocol (IP) network for control and non-control HPAA operating environment.

Simulation was conducted to assess the feasibility of such a design and shown encouraging outcomes. HPPA can benefit from a converged IP network by minimizing network components and wiring; and provide more integrated applications for the end user’s desktop.

Performance Enhancement Of Wireless Communication Systems Using Loading Algorithm

Authors

- Jameel A.J.

Abstract

Orthogonal Frequency Division Multiplexing is a powerful technique employed in wireless systems suffering from frequency selectivity.

The adaptive modulation is a powerful technique for maximizing the data throughput of subcarriers allocated to a user. In this paper, we consider a simple adaptive loading algorithm for Orthogonal Frequency Division Multiplexing based wireless communication systems for signal spectrum optimization.

The algorithm is based on the margin adaptive loading criterion and its performance over 5 GHz indoor wireless channels. Simulation results show a 6 dB improvement for BER of 10⁻² over fixed modulation.

Performance Enhancement Of Wireless Communication Systems Using Transmit And Receive Diversity

Authors	Abstract
<ul style="list-style-type: none">Jameel A.J.	<p>In this paper, we describe the concatenation of Turbo/Convolutional codes with transmit and receive diversity schemes by using Space-Time Block Code.</p> <p>It is shown that, by using two transmit antennas and one/or two receive antenna, large coding gain for the bit error rate is achieved over the system without diversity. Simulation results show that, by using systems with transmit and receive diversity, high gain can be achieved with very low complexity.</p> <p>It turns out that at BER = 10⁻⁴, the gain of 9 dB can be achieved for system using STTD transmit diversity only (without using any channel codes) and 2 dB gain can be achieved over channel coding systems using hard-decision decoding with much lower complexity.</p> <p>The most important conclusion is that, using soft-decision decoding systems enhanced with transmit diversity can provide very high coding gain; e.g., in convolutional coded system using soft-decision Viterbi decoder, the coding gain is 12 dB over uncoded system and 5 dB over hard-decision decoding in flat fading channel, while the coding gain is about 13 dB for turbo coded systems using soft-decision decoding based on SOVA algorithm with transmit diversity and the coding gain is 15 dB if the decoder is based on Log-MAP algorithm.</p> <p>In systems using transmit and receive diversity, the coding gain is much higher, e.g., for convolutional-coded systems, the coding gain is 20 dB, while for turbo-coded systems using SOVA and Log-MAP algorithms, the coding gain are a little more than 20 dB and 21 dB, respectively.</p> <p>©2010 IEEE</p>

Improving XED For Extracting Content From Arabic Pdfs

Authors

- Hadjar K.
- Ingold R.

Abstract

PDF documents are widely used but the extraction and the manipulation and of their structured content is not an easy task.

It requires sophisticated pre-processing and reverse engineering techniques to get such achievements. In this paper, we present an improvement of XED in order to handle unresolved issues related to the analysis of Arabic documents.

A set of rules were proposed and implemented to enhance the extraction of Arabic content, by taking care of the different Arabic fonts, through mapping the un-interpreted Unicode values to the other interpreted sets as well as applying a reverse algorithm whenever needed.

We finally expose concrete evaluations for the improvement of XED.

Batch Arrival Vacation Queue With Second Optional Service And Random System Breakdowns

Authors

- Maraghi F.A.
- Madan K.C.
- Darby-Dowman K.

Abstract

A single server queue with a second optional service, Bernoulli schedule server vacations, and random system breakdowns was analyzed.

It is assumed that customers arrive to the system in batches of variable size, but served one by one. As soon as the first service of a customer is completed, then with probability k he may opt for the second service.

After a customer is served, the server may decide to leave the system with probability p, or to continue serving customers with probability 1- p. If the system breaks down, it enters a repair process immediately.

The repair time and the vacation time both are assumed to have general distributions.

We obtain steady state results in explicit and closed form in terms of the probability generating functions for the number of customers in the queue, the average number of customers, and the average waiting time in the queue.

Some special cases of interest are presented and a numerical illustration is provided.

On An M/G/1 Queue With Optional Server Vacations Based On Exhaustive Service And Single Vacation Policy

Authors

- Madan K.C.

Abstract

We analyze a single server queue with optional server vacations based on exhaustive service. Unlike other vacation policies, we assume that only at the completion of service of the last customer in the system, the server has the option to take a vacation or to remain idle in the system waiting for the next customer to arrive.

The service times of the customers as well as the vacation times of the server have been assumed to be arbitrary (general). We use the supplementary variable technique and obtain explicit steady state results for the probability generating functions of the queue length, the expected number of customers in the queue and the expected waiting time of the customer.

Some known results of the M/G/1 queue have been derived as a particular case.

A Knowledge Based Process Proposal For Mobile Security

Authors

- Beji S.
- El Kadht N.

Abstract

Mobile applications are an emerging area in software development. Having a wide and heterogeneous users community as a target implies a special focus on technical requirements.

In this paper, we are concerned with the handling of a relevant non functional requirement which is security.

During the building process, the software developer should be assisted for security assessment. We present in this paper, a security ontology based support for mobile software developer.

The ontology is structured in sub-ontologies, each one deals with a set of concepts. Relevant security concepts and semantic relationships with additional non functional requirements are handled and presented in our conceptualization.

The ontology is implemented with OWL-DL.

Task Organizer Assistant System (TOAS)

Authors

- Boukhadour F.H.
- Jalal-Karim A.

Abstract

Statistics indicates that 90% of errors are caused by the system not by employees. In any normal working day we are suffering from the lack of clarity regarding the work we have to do; in addition to the responsibility we have to take when an error is done or the credits we deserve to earn when a good work is accomplished.

This research paper offers a solution for the challenge faced by many Managers, Team Leaders, or University Instructors in the public as well as the private sector across the world. Task Organizer Assistant System (TOAS) is designed to organize the work flow, allocate specific tasks to the right team member or employee in a specific department, and manage these tasks across the organization.

This system will provide many other benefits along with its main purpose which is "Improving job clarity", it will also provide an optimal work allocation, which will consequently develop the quality of work and enhance the productivity of employees by acting as a motivational tool to improve the feeling of fairness which will positively reflected on employees moral, on the other hand (TOAS) will help the manager to do his/her job more effectively, improving the quality of work of the department and facilitate monitoring, feedback and control by automating the follow up process.

Another benefit derived by (TOAS) is the ease of identifying work responsibility and can be used as an evaluation tool by the HR department or the department manager himself to assist the performance of the department as a whole.

Data Mining And Knowledge Discovery: An Approach For Sustaining Development In GCC Countries

Authors

- Al-Roubaie A.
- Abdul-Wahab R.S.

Abstract

The aim of this paper is to discuss the importance of data mining in sustaining development in GCC countries.

As a new technique, data mining enhances the potential of knowledge discovery for improving environmental management and facilitating socio-economic transformation.

Knowledge creation and information dissemination have become necessary for human endeavors. In the Arab world, the digital divide remains a matter of concern to policy makers, businesses and academicians.

Building capacity driven by modern ICTs could help in closing the knowledge gap and sustain development.

Adaptive Classified Vector Quantisation Of Non-Orthogonal Representations Of Images And Its Application To Image Compression

Authors

- Hussain A.J.
- Al-Jumeily D.
- Lisboa P.

Abstract

A novel digital image compression technique using classified vector quantiser and adaptive transform coding is presented for the efficient representation of still images.

Each sub-image is classified into one of five classes based on its directional variances, then adaptively transformed. The transformed sub-image is then vector quantised. The simulation results showed improvements in the peak signal to noise ratio at the expense of increased computational complexity.

The improvements in the quality of the compressed images outweigh the computational complexity of the model.

Agent IDS Based On Misuse Approach

Authors

- Barika F.A.
- El Kadhi N.
- Ghédira K.

Abstract

Most current IDS are generally centralized and suffer from significant limitations when used in high speed networks, especially when they face distributed attacks.

This paper shows that the use of mobile agents has practical advantages for intrusion detection. For this purpose we carried out a comparative experimental study of some IDS, showing their limits and then we propose an implementation of a new MAFIDS (Mobile Agent for Intrusion Detection System) model focusing on misuse approach.

The performance of MAFIDS is investigated in terms of detection delay, false alarm and detection rate by comparing it to a centralized IDS over real traffic and a set of simulated attacks.

Novel Hybrid Classified Vector Quantization Using Discrete Cosine Transform For Image Compression

Authors

- Al-Fayadh A.
- Hussain A.J.
- Lisboa P.
- Al-Jumeily D.

Abstract

We present a novel image compression technique using a classified vector Quantizer and singular value decomposition for the efficient representation of still images. The proposed method is called hybrid classified vector quantization.

It involves a simple but efficient classifier-based gradient method in the spatial domain, which employs only one threshold to determine the class of the input image block, and uses three AC coefficients of discrete cosine transform coefficients to determine the orientation of the block without employing any threshold.

The proposed technique is benchmarked with each of the standard vector quantizers generated using the k-means algorithm, standard classified vector quantizer schemes, and JPEG-2000.

Simulation results indicate that the proposed approach alleviates edge degradation and can reconstruct good visual quality images with higher peak signal-to-noise ratio than the benchmarked techniques, or be competitive with them.

Batch Arrival Queueing System With Random Breakdowns And Bernoulli Schedule Server Vacations Having General Vacation Time Distribution

Authors

- Maraghi F.A.
- Darby-Dowman K.
- Madan K.C.
- Po R.W.

Abstract

This paper studies an Mx/G/1 queue with random breakdowns and Bernoulli schedule server vacations where after a service completion, the server may decide to leave the system with probability p, or to continue serving customers with probability 1 - p.

It is assumed that customers arrive to the system in batches of variable size, but served one by one. We consider a general distribution for vacation time, while we consider exponential distribution for repair time.

We obtain steady state results in explicit and closed form in terms of the probability generating functions for the number of customers in the queue, the average number of customers, and the average waiting time in the queue.

Some special cases of interest are discussed and some known results have been derived. Numerical illustration is provided.

The Performance Of Integrated Wired Networks With Wireless Networks

Authors

- Al-Amawi A.
- Khanfar K.
- El-Qawasmeh E.

Abstract

Computer networks can be built using either wired or wireless technology. Although wired network has been the traditional choice, wireless technologies are becoming more popular.

The primary purpose of this paper is to analyze the impact of a wired access method Carrier Sense Multiple Access with Collision Detection (CSMA/CD) protocol and Token Ring protocol on the performance of an integrated wired with wireless LAN.

Packet Reservation Multiple Access (PRMA) is used for wireless networks. The performance parameters, such as delay and throughput, of an integrated model have been analyzed in both PRMA-CSMA/CD and PRMA-Token Ring.

A numerical analysis based on the performance analysis presented in this paper may help in studying the affect of wired access method CSMA/CD and Token Ring on system performance and stability of integrated wired with wireless networks.

Gapbnf-Rule: A Genetic Miner Rule

Authors

- Shakir R.
- Abdul-Wahhab

Abstract

The aim of this paper is to present an evolutionary system for classification problem called GAPBNF-Rule. GAPBNF-Rule is a powerful evolutionary method that distinguishes between the genotype and phenotype.

The genotype is a list of integers which represent productions in a defined syntax while phenotype is an SQL query. The performance of the GAPBNF-Rule is measured with a set of data and compared with the performance of two existing systems: ESIA and Clustering GP.

Preliminary results support that GAPBNF-Rule is an effective system and is competitive with ESIA and Clustering GP.

Estimation Of The K-Orientability Threshold

Authors

- Malalla E.

Abstract

Let Double Strok G Sign (n, m) be an undirected random graph with n vertices and rn multiedges that may include loops, where each edge is realized by choosing its two vertices independently and uniformly at random with replacement from the set of all n vertices.

The random graph Double Strok G Sign(n, rn) is said to be κ -orientable, where $\kappa \geq 2$ is an integer, if there exists an orientation of the edges such that the maximum out-degree is at most κ . Let $c_{\kappa} = \sup\{c: \text{Double Strok G Sign}(n, era) \text{ is } \kappa\text{-orientable w.h.p.}\}$. We prove that for k large enough, $1 - 2\kappa \exp (-\kappa + 1 + e-\kappa/4) \leq C \kappa/\kappa \leq 1 - \exp (-2\kappa (1 - e-2\kappa))$, and the time $c_{\kappa}n$ is a threshold for the emergence of a giant subgraph of size $\Theta(n)$ whose edges are more than κ times its vertices. Other results are presented.

Multiple-Choice Allocations With Fixed Densities

Authors

- Malalla E.

Abstract

We analyze the performance of the randomized multiple-choice allocation process in the fixed density model. We show that the allocation process leads to $O(\log \log n)$ expected maximal bin load when $\theta(n)$ balls are allocated into n bins, where each ball is inserted into the less loaded bin among two bins chosen independently and according to two fixed-but possibly different-bounded probability densities.

Other results are presented.

Abstract

In some applications, laser cutting of wedge surfaces cannot be avoided in sheet metal processing and the quality of the end product defines the applicability of the laser-cutting process in such situations.

In the present study, CO2 laser cutting of the wedge surfaces as well as normal surfaces (normal to laser beam axis) is considered and the end product quality is assessed using the international standards for thermal cutting.

The cut surfaces are examined by the optical microscopy and geometric features of the cut edges such as out of flatness and dross height are measured from the micrographs. A neural network is introduced to classify the striation patterns of the cut surfaces.

It is found that the dross height and out of flatness are influenced significantly by the laser output power, particularly for wedge-cutting situation. Moreover, the cut quality improves at certain value of the laser power intensity.

Robust Virtual Reality Environment For Improving Disability Learning Skills

<div>Authors</div> <div><ul style="list-style-type: none">Al Dhaen F.Karam H.H.</div>	<div>Abstract</div> <div><p>The expansion of ‘care in the community’ has highlighted the need for more effective educational and training media for people with learning disabilities. People who are phys ically disabled require a variety of access technology and learning depending on the nature of their disability.</p><p>The intention of modern technology policy is to enable people with learning disabilities to have as much choice and control as possible over their lives, be involved in their communities, and make a valued contribution to the world at work.</p><p>However, in order to achieve these aims, more effective educational and training media are needed as well as a Computer-Assisted Virtual Learning Environment (CVLE) for improving their skills and removing barriers that impede learning. Virtual reality (VR) possesses many qualities that give it rehabilitative potential for people with learning disabilities, both as an intervention and an assessment.</p><p>By using computing technology for tasks such as reading and writing documents, communicating with others, and searching for information on the Internet, people with disabilities are capable of handling a wide range of activities independently.</p><p>Still, they face a variety of barriers to computer use. These barriers can be grouped into three functional categories: barriers to providing computer input, interpreting output, and reading supporting documentation.</p><p>This paper proposes a virtual reality (VR) framework as a solution for such challenges which helps to meet this need and enables access to information technologies by users with disabilities in a simple and reliable way. Evaluation and practical performance results will be performed.</p><p>Discussion and an illustration of some experimental results give validation of the proposed technique.</p><p>© 2008 by Taylor & Francis Group, LLC</p></div>

Quality Of Education In Developing Countries

Authors

- Moussa N.

Abstract

In this paper some of the essential factors for achieving high quality education in developing countries are studied.

The concentration in this work is on the two most important factors, namely stressing critical thinking and enhancing the capability of using modern technologies in the education process.

Rapid Data Growth In Some Government Organizations

Authors

- Safar M.
- Al-Shayji S.

Abstract

Data growth has major effects on the government systems which leads to performance degradation and limits the availability of mission-critical applications and data warehouses.

This in turn has an impact on the storage consumption that is increasing rapidly, especially with the popularity of multimedia files. In the area of information technology, almost all government sectors observed a continuous and an unprecedented rate of data growth of stored and archived documents in electronic format.

Most estimates are that of all the information stored, either personal or organizational, only 20% is ever actually accessed and used again, and only 5% is used regularly.

We study the trend of the data growth in the computer systems available in some public/government sectors in the state of Kuwait by analyzing the various cause of data growth by knowing how much information is being generated, stored, archived, and backed up.

We propose different approaches in order to track the data growth; the first approach is the use of various software tools to analyze the contents of the pc in those sites, while the second approach proposes a standard measurement unit for all different types of data.

Analyzing historical data, spots the light on the data growth within the client's machines using different approaches.

Tracking the data growth in these sectors have helped us to come to a conclusion of the various causes of this tremendous data growth and need to cut them off.
